SIR,—I have no hesitation in saying that as a cage bird pet the Bullfinch has few, if any rivals. One of his chief characteristics is his charming sociability; I have had many a one which would take some tempting morsel from my hand on the very first day after it was caught, and it is a well-known fact that many become so attached to those who have charge over them, that they actually fret, and have even been known to pine away and die when their mistress or master has left them for some considerable time. Then what a handsome fellow he is when in full dress! His deep, glossy, black head, his ashy-grey back, like that of a Dove, and his brilliant red breast make him a picture to be admired. His imitative abilities too are somewhat remarkable, and when properly trained to pipe, his notes are sweet and melodious, and when able to pipe one, two, or three tunes correctly, his monetary value is greatly enhanced. As an exhibition bird he occupies a very prominent position, as at nearly every show of any importance a separate class is provided for master Bullie. Then again, how valuable mistress Bullie is becoming in connection with the breeding of Hybrids, and although not so brilliant in plumage as her lord and master, yet what charming specimens of her young are now to be seen at most of the shows! Who that has visited such places have not admired the marvellous blending of colours which have been produced from the Goldfinch, Greenfinch, Linnet, Siskin, Redpoll, Canary on the one side, and the hen Bullfinch on the other? And now, sir, allow me to make a most earnest plea on behalf of this bird, which I love very much, and which I am sorry to say in some districts is in danger of being exterminated, on account of the supposed injury they do in orchards and gardens by devouring the flower-buds of fruit trees. Is it not a fact that buds generally are superabundant, and so far as my experience goes, very little (if any) actual harm is done even when disbudding has been quite extensive. The fact is, "Nature furnishes a new supply of bu near the basis of the old ones, and the tr appears to suffer no appreciable harm." Me fruit trees, however, produce several tim as many blossoms as they are able to mato so that the pruning of them by the birds, taking away a portion of them, is a positi benefit, inasmuch as the fruit which comes maturity is of a much higher class, and as consequence a higher marketable value. Th then is my plea on behalf of one of the mo beautiful of our feathered friends, and herewith appeal to all readers of your val able paper to do their utmost to prevent th extermination of our old friend, by counte acting the prejudice which now exists, b appealing for mercy and justice on behalf those who cannot make the appeal then selves.

J. C. WILMOT.

A STANDARD SHOW CAGE FOR BRITISH HARDBILLS.

SIR,—When "A Well Wisher of the S.B.B and M.C." can muster sufficient courage t sign his own name (and I hope he has one to his communication, I will then conside the advisability of replying to his letter but not till then.

LOUIS J. ARRIGHI.

SIR, — Having read the report of the National British Bird and Mule Club, and Mr. Arrighi's proposition re the uniform show cage for British Hardbills, I think i this proposition stands it will be very hurtful to the exhibiting of British birds, as most British bird men like to make their own cages, which I consider an encouragement in the Fancy. I consider if a fancier likes a colour to suit himself, if he wins or not, it an encouragement for him to be able to pleas himself; but if he is compelled to show in a cage which he has to purchase, and which h does not like, there is no doubt shows wil suffer. The uniform cage will suit the jea lous exhibitor, but we are not all that way inclined. The entries in British bird classe have increased wonderfully, but I am afrai the proposed stipulation will put up th "bar." I myself make my own show cages and I consider them thief-proof. If the wire top comes in we shall visit a show to see a lot of twirlers.

S. E. JONES.

HAWFINCHES AT THE PALACE SHOW.

SIR,—Permit me to inform Mr. Ramsde that in my letter I did not intend any mi representation against Mr. Hills about hi judgment at the Palace Show, but to give him all credit due as an adept in the Fancy The main point in my letter was my askin Mr. Hills or any visitor at the Palace sho to give his opinion on my Hawfinch. It seems now as if an unrehearsed part of the proceedings had been reached. I have no got an answer to my question so far. A per son who signs himself "Scottish Hawfinch, makes a sorrowful spectacle of himself be fore the Fancy. I would like to remind him that Bathgate was a soft-bill class, and no a hard-bill class, as he seems to think Without his name to the letter, it is no worth my notice. So far he talks about things he knows little or nothing about. Mr Chick is very grateful indeed. He would like to test my ability on the points of a Hawfinch. I can give him what the points of a Hawfinch ought to be, if needs be, but I don't think he needs such—he talks as if he had all the wisdom on earth, and as if no body knew anything but himself. Mr. Chick simply states that there was not a bird in any of the classes that could beat his bird for shape and condition. He is coming out stout here. What does he mean? Was it the only bird in the Palace? He has surely employed an artist since I saw the bird last, and had it re-moulded. Both birds were examined at the National show by both Scotch and English exhibitors. Mr. Chick makes out Scottish judgment to be very indifferent indeed. I can assure him that there are as good judges to be found in Scotsmen as there are to be found in Englishmen, and, further, those that saw his bird and mine at the Scottish National Show can best judge. I can assure him I pay no heed to reporters for my information in the British Bird Fancy. I hope Mr. Axe will now try and study the normal type of a man, and tell the truth in future. I never said he saw my Hawfinch, but does Mr. Axe mean to tell me that he never sent a telegram asking my lowest price for my Hawfinch, on the second of January, and prepaid the reply? Now, Mr. Editor, I beg to inform you that I have still his telegram in my possession, and can send it on to you if required. His telegram reads:—"Gilmour, 18, Bank Street, Kirkcaldy.—Lowest offer for winning Hawfinch at Edinburgh; reply paid.—Axe, Market Place, Doncaster." I don't think my statement about this is "untrue" or "absurd" or "based on untruthful grounds," as Mr. Axe accuses. I would not lower myself to such work as this.

R. GILMOUR.

PROPOSED CAGE BIRD SOCIETY FOR POPLAR.

SIR,—A meeting will be held at the School Rooms, adjoining Poplar Town Hall, Newby Place, on Thursday, March 26th, at 8 p.m., when I hope all those wishing for the above Society will do their best to attend.

T. G. HUNT.

AN AMAZON PARROT'S STRANGE DEATH.

SIR,—A few days ago a lady brought me in an Amazon Parrot, to see if I could save its life. She had had the Parrot for over 50 years, and it was a great pet, besides being a very fluent talker. It had been fed on Canary and hemp seed, with a small portion of the small kind of maize. She had been in the habit of giving it buttered toast and tea, and bones to pick, besides other "dainties," as she called them. During all those years, she had never known it to be ill or ailing at any time, but on that morning it had sat with its feathers all up, and appeared to be ill. After much straining it passed a shell-less egg, and in so doing, a large lump came from it the size of a walnut, and quite hard. I tried all means to return this, but found I could not, neither did I dare to remove it for fear of killing the bird. A friend of mine who is a "vet." called in, and he tried to cut it off, but on further examination he found that would be the means of killing the bird, so dared not do so. We then let it take its chance, and in 24 hours it died, greatly to the sorrow of his lady owner. This was the first egg it had ever laid. Fancy, to lay one after 50 years! The bird was very fat, which no donbt caused the shell-less egg. These facts may interest your foreign bird keepers.

T. H. KINCH.

LENDING BIRDS AND OTHER MALPRACTICES.

SIR,—Having noticed in CAGE BIRDS letters signed "Fair Play" and "J.W.," I think the following will interest your readers, and will take some beating. During the past show season a certain Midland Society has held four monthly members' shows, offering a special prize for the member gaining most points in the Yorkshire section throughout the four shows. After the first show a certain official, seeing he would stand no chance of securing the special prize offered, took a visit to a well-known Bradford firm and arranged for a case of birds to be sent down, on what conditions your readers will see. The birds duly arrived, note, just previous to the second show; of course, got up in tip-top condition. The best of them were exhibited at this show, getting well amongst the prize list, also at the two following shows, and capturing the point special. These winners were exhibited at Derby, Ilkeston, etc., and did fairly well. The winnings of these birds soon found customers for the cheaper ones, which purchases were of course, as anyone can see, a kind of payment for the loan of the winners. Now the show season is over these winners have been returned to their owners, but not before the borrower had tried about Christmas time to get a nest from the best pair before returning them. I need hardly say he did not succeed. I think it high time stricter measures were adopted to stop these fraudulent practices. In my opinion, both lender and borrower are equally to blame.

LOVER OF JUSTICE.

A HALF-DAY RAMBLE ON THE FYLDE.

SIR,—'Tis Saturday, and a day in February, and the Town Hall clock is just striking a quarter to two, as I close the door behind me, my object being to ramble as far as Poulton, which is situated some four or five miles from Blackpool. After twenty minutes' brisk walking, I am soon on the outskirts of the town. Before reaching the country proper, I have to thread my way through hundreds of hen runs; people round this district (Layton) seem to make hen farming their special hobby. After leaving the hen runs, I turn down a short lane, over an old stile, and am at once in the country. On my right, I notice an old Tree Sparrow's nest in a tall willow, which, by its looks, has braved well the winter's gales. Everything seems still and quiet, but the silence is at length broken by the scream of several Gulls passing overhead, which are evidently making towards the coast. Taking a short cut across a field I enter a lane called "Robin Lane," which derives its name from the number of Robins' nests which are found there every summer. I do not stop in this lane long, for turning quickly to my left, I am soon on the main road from Blackpool to Poulton. At the first far I come to a farmer and his boy are busy chopping trees in the orchard. After chopping a few down, one lops off the branches, while the other saws the trunks up into logs. No doubt the branches will be used for training peas up, and the logs will be for burning. I move away from here, for they seem to eye me up and down as if I were after taking something. I still keep on the main road, and looking over the hedge on my right, I notice five Starlings (called "Shepsters" round here). I crouch near the hedge to get a better view. What lovely birds! All as clean as new pins, shining like satin, and spangled to perfection. The noise of a farmer's cart passing behind me causes them to take flight. Lower down the road a Lark rises over the hedge but drops down again on the other side without a murmur. I am now on the boundary of Poulton, birds being more plentiful about here. At the foot of a hedge which runs parallel with the road, is a Blackbird, showing itself off, but being a hen bird it is not proper black, but more of a brown shade. But look higher up the hedge, there he is, the proper "Black" bird, his amber beak showing up well against his plumage. After a few short hops, he utters a loud shriek, darts through the hedge, and is lost to view. At the opposite corner of the same field is a solitary "Tu-wit," who seems to be waiting for someone to come round with a gun and shoot him. I now quicken my steps; the sun having gone out of sight, it has made it a bit colder. Starlings keep flying past overhead, and several Crows seem to be winging their way towards Singleton Park, where there is a large rookery. But look over to the left, what is all that flock of birds doing, first rising in the air, then settling down again in another part of the field? After a little watching I see what the disturbance is about. There is Mr. Hawk, with all the smartness of a Fakir. As soon as they alight, he darts down as quick as an arrow, and if he does not kill one of them at the first attempt, sooner or later, one of them will fall a victim to his practised method of meal bunting. I now pass a whole flock of "Tu-wits" on some marshy land, but they don't take any notice of me, for if one is disturbed he only flies about twenty yards before he settles down again. The air now rings again with the noise of "Chack, chack chack," and before I have time to look where it is coming from a flock of Fieldfares rises up in front of me. The fields round here are alive with Throstles, who seem to be very busy looking for worms, while a solitary Robin is trying to welcome me with a little song; he is perched on a hedge to my right. I now reach the village of Poulton, with its old-fashioned stocks and whipping pillar, and after having a look round a friend's birdroom, I retrace my steps homewards, but do not land home before night's shadows have made their appearance, and heaven's lamps have shone bright above me.

"JACK BROWN."

WHY NOT WILD CANARIES IN ENGLAND?

SIR,—This subject I have often thought over. I have an aviary in my garden with a large wire flight in front. It is wired on three sides and at top. My birds have a closed aviary at the back which they have free access to. I keep them out all the winter, and I would not wish to see a more healthy lot of birds. They are all Norwich. Now, what I want to bring to your notice is, that some of them will insist upon roosting out in the open wire run. I have frequently to go out and put a piece of board over them on the top of wire to keep the snow off them. Sharp frosts they do not take any notice of. I had one hen which built her nest in the wire run. A heavy snow storm came on, so I put a board on the wire over her, to keep the snow from her nest. She had four eggs and hatched them all out and reared the young. Now if they can stand this, they are more hardy than we give them credit for being. And I am fully persuaded they would stand our winter. If some of our gentry who have large grounds, or anyone living in the country, would take the matter up, I feel sure they would succeed. But nothing but pure Green Canaries must be tried, as any yellow or splashed birds would be sure to be shot or trapped. My idea is, put the Canary eggs under the Linnet, Goldfinch or Greenfinch (or how would the Redpoll or Siskin do?), first taking their eggs away. They would rear them and teach them to find their food. Being Green birds, they would not be noticed. The following spring they would nest and rear their own young, or some gentleman might try turning out a few pairs of old birds about the end of April, or the beginning of May. I have stated my views, and will now leave it in the hands of a more practical fancier. I am a novice at the business: I have only been at it fifty years. I do hope the matter will be taken up in all parts of England, and at the end of the season, fanciers will send you word how many they have had hatched, and the number flown. I would just mention you must not put them under the Hedge-Sparrow, as I have seen that tried. They hatched out all right, but the parent bird choked them with worms.

H. PETTIT.

BEGINNERS READ THE ANNUAL

PROPOSED SOCIETY FOR SHETTLESTON AND DISTRICT (Glasgow.)

SIR,—A meeting of those favourable to the formation of an Ornithological Society for Shettleston and District (Glasgow), will be held in the Railway Mission Hall, Station Road, Shettleston, this Saturday, 21st March, at 3.30 p.m. prompt. A large attendance respectfully requested.

W. DEVLYN, Secretary pro. tem.

WHERE DOES THE COLOUR COME FROM?

SIR,—"Past Novice" refers me to the "making of the Yorkshire and Norwich" for the origin of the Cinnamon mark. According to his own ideas the green mark must have originated at the same time, but that does not say they introduced the Cinnamon for colour. Now, about this bird that has won all along the line; "Past Novice," kindly tell me what bird you are illustrating and who owns it; I can then perhaps tell you how it was bred. It might surprise us all. The pencilling on a Green is one of its chief characteristics, and by introducing the Cinnamon these pencillings are blurred and smoky. It is, indeed, news to me to hear of the best Greens possessing so much common blood. It is great news for the Green Canary breeders. Respecting the colour in Greens, there are so many shades that the majority of us differ. Maybe, "Past Novice" himself would not agree with everyone. I still maintain that 95 per cent. are bred in Liverpool. There are some come in, but don't forget we do send a winner out now and again to compete against ourselves. With reference to Mr. Thompson's Buff; as I happened to be at the show when this bird was bought, if "Past Novice" says this bird was bred from Cinnamons, I think there is a serious mistake somewhere, because Mr. Thompson and I were given to understand it was bred from pure Norwich. Maybe, "Past Novice" is the breeder of this bird. The Yellow Green hen "Past Novice" speaks about, I will admit is the best Yellow Green hen in existence: but she did not win the special for best Green at the Scottish National, so "Past Novice" should speak from facts. This hen was also supposed to be bred from pure Greens; so somebody must have been misled. The birds from Cheshire are included in Liverpool and District, and I am sure where these great winners come from is also included in Liverpool and District. It is very funny how all these toppers find their way into Liverpool. Do the breeders of these toppers not know their value?

J. W. METCALFE.

THE AGE OF BIRDS.

SIR,—I noticed in "Le Matin," the great French journal, a letter on the age of birds which contains something that may interest your readers. The writer says: Birds of very small size and slender build not only live to a very old age, but in their old age are freer from accidents and sign of senility than is always the case among animals. It used to be said that Crows and Carrion Crows lived over a hundred years. If this statement seems rather exaggerated, there is no question that well-known naturalists speak of Crows of fifty, sixty, and even of seventy years old. Eagles, Horned Owls, and Herons attain similar ages, and Mr. Gurney, the English naturalist, cites a Condor of fifty-two years old, a Horned Owl of sixty-eight, and a royal Eagle that died in its fifty-sixth year. But the record of longevity undoubtedly belongs to the Parrot. Mr. Abrahams declares than an Amazon Parrot reached the ripe old age of 102 years, and M. Levaillat, tells us of a Parrot, Jacko by name, that had lost its memory at sixty, its sight at ninety, and had died at ninety-three. Tame birds live just as long. A Swan reached the age of seventy—a tidy length of days, though considerably short of the 300 years which legends give to the age of Swans. The birds that live the shortest, and are the tiniest, live at least eight or nine years. But this short duration of life is the exception, and not the rule. A life of from fifteen years to fifty is the more common. Canaries have been kept alive for seventeen and twenty years. Nightingales live up to twenty-five years; Bullfinches and Blackbirds over twenty. What can account for this remarkable longevity, which places the ages of birds in general next to that of reptiles? For an answer we must turn to the learned Professor Metchnikoff, of the Pasteur Institute, who has devoted so many years to the interesting study of old age and longevity. M. Metchnikoff says that the reason for this extraordinary long life is to be found in the constitution and the mode of living of these birds. It is known that the large gut is absent in birds. This prevents the accumulation of digested matter, and explains why the crop of certain birds contains but one "microbian flore," and that a very poor one. Thus, they do not become fermented and inflamed by the toxins secreted by those injurious microbes which generate while the excretaries travel through the large gut. It is, therefore, owing to the construction and the condition of their intestines that birds live to such great age.

M. PAILLOT.

THE BORDER FANCY CLUB AND ITS JUDGES.

SIR,—I am pleased to see you have been good enough to allow a fancier to enter this discussion although not a member of the B.F.C., which is right, because your valuable paper has many readers that breed and exhibit the Border Fancy Canary that take no interest in the B.F.C. And I hope that fanciers of this active little bird, whether members of the B.F.C. or not, will have the courage of their convictions and express themselves freely (but firmly), and weed out the dissatisfaction that at present prevails. I am also pleased to see Mr. Patterson have the courage to strike out for freedom. He is acting more admirably, I think, than the few fellow judges he refers to, providing he is not acting as the mouthpiece for them (and I think not). But while I am forced to admire Mr. Patterson's straightforwardness, I am also struck with the tone of his epistles, as he seems to hold that only a very few members of the B.F.C. are capable of judging Border Fancies. Now might I ask Mr. Patterson if he has never met fanciers outside the B.F.C. capable of judging Border Fancy Canaries, or is it the B.F.C. that confers the qualification for judging this variety?

ROBERT LAMBIE.

SIR,—May I, as a member of the B.F.C.C., say that I am very sorry to see Mr. Patterson taking so sorely to heart the passing of the rule which has been and is now under discussion. But he will have to give in to the majority, the same as I have had to do. I don't believe in one man ruling the whole affairs of such a big club, as he was trying to do when he wrote to Mr. Jamieson to call a special meeting, after he had received notice through CAGE BIRDS of what was coming up at the meeting, the same as I did. I was at the meeting and heard it thrashed out, and was satisfied with the result, which was almost unanimous. Mr. Patterson said in his last letter that members of the B.F.C.C. were mostly members of the committee of our annual shows, but he forgets that most of the shows are mixed, and we Canary hands have very little chance to get those we want. We have to give in to the majority. We are all mostly working men; we cannot go on showing at every show under the same judges, and never getting our expenses out of them. But if there were a greater number of judges, we could risk a little. There is a committee of nine appointed from the different districts with power to appoint whom they think capable of judging. So I don't see where the novices will come in to judge our shows. I wish to hear from more capable penmen than myself.

W. H. REID.

[Correspondents must confine themselves to the points at issue. Several purely personal and irrelevant remarks have had to be deleted from this letter.—Editor.]

THE POULTRY WORLD

On Sale Everywhere To-day.

This thoroughly up-to-date and efficient Poultry Journal should be obtained by every fancier and keeper of Poultry. Many excellent Photos and Illustrations in every number. The Articles are written by Experts on their particular variety, and will be found to be a fund of information hitherto unknown in Poultry journalism.

THE NIGHTINGALE IN MID-DEVON.

Sir,—Being a reader of Cage Birds, I see one of your correspondents asks whether or not the Nightingale has been heard to sing in Mid-Devon? Twelve years ago I heard it in the woods at Coombe Raleigh, Honiton, East Devon.

Honitonian.

THE HEATING OF BIRD-ROOMS.

Sir,—In reading Mr. Wear's article in Cage Birds' Annual, I notice he speaks of a simple contrivance for heating a bird-room, and incidentally mentions an attic as a likely bird-room. As the majority of flats have no fireplaces, I should very much like to learn of the apparatus, presuming it is not a secret. Noting that no apparatus is advertised for the purpose, I feel sure there are many Fanciers who would be glad to know of it, and probably there are others besides Mr. Wear who would be glad to have some advice. Henry Tomsett.

[Our correspondent will find some hints on the above subject in the "Novices' Note Book" this week.—Editor.

THE HYBRID CLASSES AT DUDLEY SHOW.

Sir,—In reply to Mr. J. A. Lees' letter in last week's issue, No. 5 and No. 6 in Class 17 were quite in order. When Schedule was prepared, Class 17 was put to read: "Dark Canary Mule, any variety." How the word Hybrid got there I cannot say. It was not intended, hence my birds being entered in Class 17. This I hope will explain all Mr. Lees wants to know as to No. 5 and 6 in Class 17, at Dudley show.

E. Hingley.

Sir,—I notice in your valuable paper a letter from Mr. Johnson, in which he states that Mr. Ward is labouring under a delusion in supposing that a bird bred from a Canary and a Finch is a Mule. If this is so, what about the National British Bird and Mule Club? Are they under a delusion also? In the report of the Foreign Bird Section of the Palace Show, I noticed that when a rare bird was left out of the prizes, Cage Birds said: "Hard lines." Rare foreigners cost a lot of money, but Redpolls and Bullies are cheap enough, and if a fancier should be lucky enough to breed one, I think he should be encouraged. If Mr. Johnson would buy a Redpoll and a Bullie with the money he is spending on stamps, he might get to the top next show season.

Scotia.

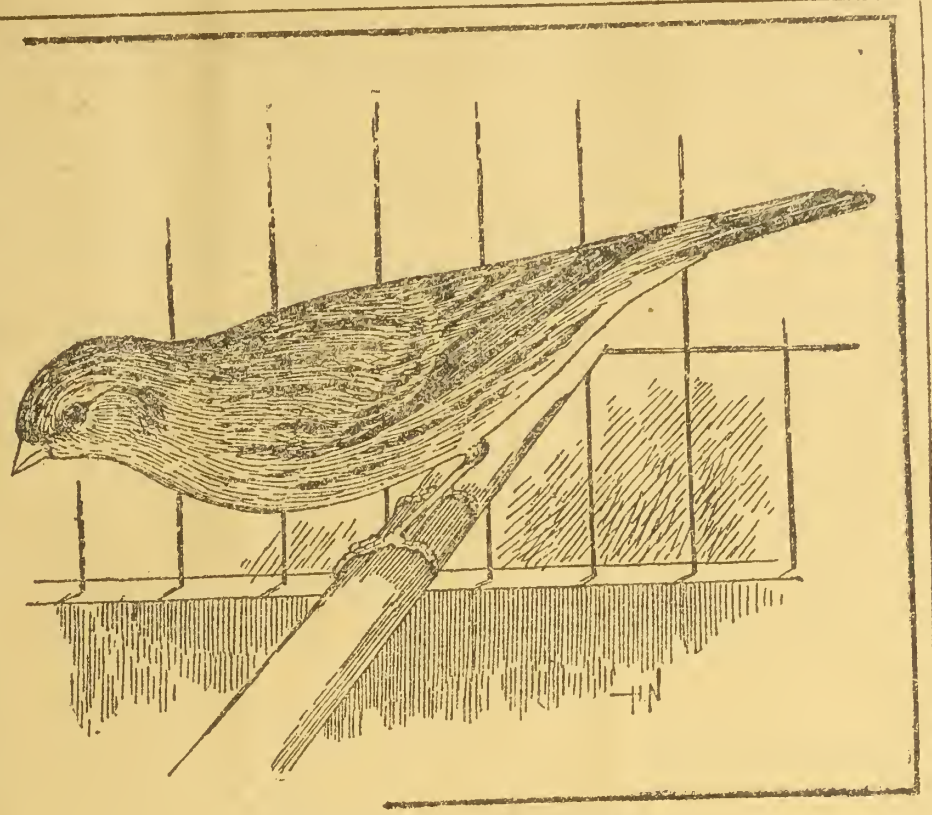
THE FUTURE OF THE BELGIAN CANARY.

Sir,—Mr. Robertson, in his note in last week's issue, deals with the past of the Belgian Canary; but what of its future? It is not bright, but black. The men who have judged, either did not know them, or shut their eyes to the fact that there were a lot of first-crosses being palmed off as Belgians, which must have been visible to the eye. These birds are destroying the Belgian. It was very good of Mr. Robertson to write to your columns and have the bungle thrashed out in public. If a leading fancier shows the same bird in two separate classes, what will others do? The example was bad, and all Belgian fanciers should combine and put an end to this caper. Breed pure Belgians, if they can be bred, and pay good prices for pure Belgians. In the Belgian classes show pure Belgians 'and down with mongrels.

Pure Belgian.

Sir,—The Belgian Canary of 1860—large, erect, heavy-shouldered, massive in frame and rough in feather—is still in demand. But the question of to-day is—where can it be got? Search has been made for the Scotchman's typical Belgian, to assist in putting on heavy shoulder to his favourite, the "Bird of Circle," but it has not of recent years been found. The Belgian of 1907 was small and close in feather, and had become so rare that crosses from the Scotch Fancy were put into cages with one perch, and passed as "Belgians," actually winning prizes. I have seen the day when birds which appeared in the Belgian classes in 1907 would not have been judged, but put aside. The judges have been blamed; but what could they do? They had to deal with what was entered. How the present state of matters is to be remedied is a problem not to be easily solved; the foundation is gone. If, however, a good reliable strain can still be founded, then the founder will be a benefactor. The Belgian in itself and for itself is worthy of cultivation. A really high-class Belgian is a specimen to be desired. Apart from its value (and it is very valuable), an ideal Belgian will attract anywhere. Many breeders would prefer a pair of good Belgians to anything else in the feathered tribe. All honour to the few who are devoting their time and attention to the breeding and rearing of the pure Belgian. They have a task before them. May their efforts be crowned with success is the wish of

A Scotch Lover of the Breed.



TWITE-CANARY HYBRID.

Successfully Exhibited by Mr. W. H. MacDougall (Fort William, N.B.)

GRIMSBY AND DISTRICT ORNITHOLOGICAL SOCIETY.

Sir, — We notice a report of the new Society just formed in Grimsby, which has taken a very similar name to that just relinquished by the old society. We should like to point out the fact that the old society has changed its name, as reported in a previous issue of your valuable paper, and is now called the Grimsby and District Ornithological Society. Financially and numerically we are strong, and having secured Sir Geo. Doughty, M.P., as president, and the distinguished patronage of Lady Doughty an several other wellknown ladies and gentlemen, we feel assured that our success will be even greater in the future than in the past. Moore and Crowston, hon. secs.

A HINT ABOUT CAGE-BACKS.

Sir,—With reference to Mr. John Gillott's Illustrated Idea, published in your issue of February 15 re the joining of boards for a cage back, I have an idea that will be very useful to the working-man cage-maker. My friend would not be bothered gluing his cage backs together, as the wood is all in one piece, and he can get five or six good and light cage backs for three pence. This, you will agree, is not at all dear. Go to any tea dealer's shop, and ask for a tea chest, 3d., which is made of compressed wood. Saw off the lengths required for the cage back. As for red mite or any other insects, they cannot get into it anywhere. The cages I make with them I can fill brimful without losing a drop of water. When enamelled they look very neat.

Ralph Jackson.

A LINNET OF MANY PRIZES.

Sir,—A Linnet, the property of Mr. Thos. Brown, Edinburgh, has been in his possession five-and-a-half years, and been exhibited nearly sixty times. Although it has only three first prizes to its credit, it has only been out of the tickets some half a dozen times. It has also won numerous specials. For superb colour and lacing it would be difficult to find a better. Its only fault is that it is a wee bit on the small side, which no doubt has told against its taking premier honours many a time. It has been once at the Crystal Palace, and has travelled three times to Swansea. It has also been exhibited at the Scottish National five times. The first year it did not get into the tickets, but the next four years it had three thirds and a fourth to its credit, which, considering the strong competitors and large classes, is truly a remarkable performance. No little credit is due to the wife of the owner for the care and attention she bestows on her husband's birds. She is a great believer in keeping the cages clean, and feeding the different varieties of Hardbills on their proper seeds; also in giving the bath and spraying, for keeping British birds in show form. I may mention that its owner has often been offered a good price for it, but always declined, with the remark that a "bird in the hand's worth two in the bush." At present the Linnet is looking in splendid form after coming through a heavy show season.

Thistle Top.

CAGE BIRD UNION MATTERS.

Sir,—Personally it was with feelings of satisfaction that I read the report of the proceedings of the annual meeting of the C.B.U. The workings of a society will, under its influence, be made to run on smoother lines, and what has hitherto caused an anxious time, viz., the fixing of show dates, promises to be a rough place made plain. I should like to see an arrangement some to with regard the Y.C.C., as I know there are others besides myself who have had to sever their connection with that body since the formation of the C.B.U. If the Union allows a person to exhibit at an affiliated show one week, and the next is powerless to prohibit him from exhibiting at a show held under no other conditions and rules except those devised for the occasion, surely it is possible to come to an arrangement with regard to to the Y.C.C., as I know there are others besuch a body as the Y.C.C., whose end and aim are identical with those of the C.B.U. When a member of the Y.C.C. exhibits at a Union show he agrees to abide by the Union's rules, and the Y.C.C. does not seek to restrain him from so doing. Why, then, should not the members of the Union be allowed to exhibit at the Y.C.C. shows, where they would be practically under the same regime in all respects but one? I am in favour of Rule 17 as it stands, but, at the same time, I think a notable exception could be made in respect to the club referred to, and an intermembership agreed upon. It would certainly be a step in the direction of eventually bringing the two into one fold.

E. Woodhead,
Hon. Sec. Hartlepools C.B.S.

Sir,—I would like through the columns of your popular paper to congratulate the thirty delegates, also the chairman and secretary, of the Cage Bird Union, on the successful meeting they held at Manchester on February 22nd. The amount of business got through, and the manner in which it appears to have been performed, are alike a credit to everyone concerned. Before I got far through your splendid report I discerned what I considered an indication of business tact in the proceedings. I refer to that part of the programme which dealt with the appointment of secretary. Yes, gentlemen, I again congratulate you on the fact that you managed to make an arrangement whereby the valuable services of Mr. Lythgoe are to be retained for another year at least. I can imagine this good stroke of work so early on putting the delegates in a good mood, and the better fitting them to cope with the business that was to follow. In regard to the new rule, re clashing of dates, may I be allowed to say, as the author of this suggestion from No. 1 District, that, as Mr. Brown ably stated, it was never intended that such a rule should act arbitrarily at all. But the cases of unnecessary clashing that took place in this district last year so well presented to the meeting by Mr. Brown, I think prove the desirability of such a rule being brought into operation. I am not so sanguine as to think there will be no difficulties to contend with at first, but I firmly believe, if this rule is properly taken advantage of, it will reduce clashing to a minimum, and need not act harshly in any case, but may mean to some societies a successful show which otherwise would have been a failure. The case instanced by Mr. Bradshaw, of Manchester and Altrincham, is somewhat striking, I'll admit. In fact, I believe most of the difficulties to be met with will be found in similar cases where two societies are situated but a few miles either side of the line dividing any two districts. Where such cases do occur, however, the districts concerned might reasonably be expected to arrange that such an occurrence was not repeated. With Mr. Curtis I quite agree that this year preference should be given to those societies who have dates already fixed, and which are possibly of some years' standing. The additional powers given to district committees in regard to cases of fraudulent or discreditable conduct constitute, in my opinion, another move in the right direction, as the local committees are most likely to know, or get to know, the circumstances surrounding such cases. The Executive Council, however, have the veto in all cases, and I have no doubt they will use it with discretion. From Mr. Lythgoe's statement re railway charges, etc., it is quite evident there is only one remedy, but to name it here would probably be considered out of order. The question of late entries I am afraid will not be settled at annual meetings, but by persuading the general body of exhibitors that it is absolutely necessary for them to be in at the date fixed. Rule 17 has the appearance of becoming a hardy annual, but I think the delegates took a wise course in leaving it alone for the present, although I believe the time will shortly come when none but affiliated members will be allowed to exhibit at shows held under C.B.U. rules. That the Council justified their action in allowing advertisements on show and other rules I think the majority will agree. I should have objected as strongly as anyone did I for a moment think there was any favoritism in the business; but such does not appear to be the case at all, competition for same being open and above board. Had they (the Council) not accepted the highest tender, then I could have understood some noise resulting. And to say, because every advertiser cannot be accommodated at one and the same time, or because of petty jealousy on the part of someone, that we should forego this lucrative source of revenue, seems to me financial folly.

Blaydon. D. A. Ogilvie.

THE DULWICH AND PECKHAM C.B.S.

Sir,—I would thank you to allow me space to give publicity to the present position of the above society. It has been such a source of gratification to us to find that we have the support and confidence of such a large section of the Fancy, that we feel we shall now be able to weather the storm, and prove that we are deserving of the trust reposed in us. Several influential gentlemen have come forward with handsome subscriptions to a fund to wipe off the liabilities left us by a section of the late committee, who, after landing the society in grave financial difficulties, leave the burden of debt for others to liquidate, found an opposition society practically upon our doorstep, canvass our members, and make a strong point of the fact that they start with a "clean sheet." Comment upon such action is superfluous, but I would like to call the attention of members to a remark from Mr. Crisp, in a letter which accompanied his donation, as follows: "I, as a unit of your society, consider myself at least morally responsible for my share of the loss incurred." If all members would look at the matter in that light, our task would be considerably less. If they would at least send on their subscriptions, it would materially strengthen the hands of the hard-working committee, the chairman of which is

H. E. Tringham.

Subscription list: Messrs. R. L. Crisp and Dr. Sedgwick, £1 1s.; J. B. Waterman, F. S. Matthes, and H. E. Tringham, 10s. 6d.; D. Mabey, 10s.; T. Boydon, R. Brownlie, F. Johnson, L. J. Richardson, C. T. Maxwell, J. Robson, and A. Cunningham, 5s.; Mrs. Cunningham and Mrs. Cole, 2s. 6d.; J. Hazell and F. Cole, 2s. 6d.; Cranfield, W. Hodson, and E. S. Lugg, 5s.; Messrs. Thomas Holloway, N. A. Meredith, Norman Reed, Frank Bethell, G. Linge, and S. Bennett, 2s. 6d.; Friends, 2s.

PRINTED NOTE PAPER AT COST PRICE

Until further notice we have decided to supply artistic Memorandum Forms with name, address, twelve words of particulars, and block of any special variety, at the following cheap cash prices:—

250 for 2/-, 500 for 2/6.

Carriage paid to any address in the U.K.

Our latest style of note-head has been universally admired, and we will gladly send specimen to anyone enclosing stamped addressed envelope.

F. CARL, "Cage Birds," 154, Fleet St., London.

The Novices' Notebook.

This page will consist of topical hints, addressed chiefly to beginners, concerning every branch of the hobby of bird-keeping, and the notes will be contributed from time to time by various leading experts.

(Continued from page 273).

Later on, when the moulting season is over, the cages might be removed and stored out of the way, the wire partition taken down, and the whole space in the room again converted into one large and substantial flight for all the birds to winter in.

The hardier class of common Canaries would succeed well in the complete structure of shed and open flight with unrestricted freedom of both sections.

For mule-breeding, it might be used in several ways. First, there is the haphazard method of introducing a cock Finch of some kind into a group of Canaries flying loose, which no practical and thorough-going fancier should tolerate for a moment. It is true that Mules might be bred even though they were really genuine mules; this loose method of breeding them is quite certain to throw a shadow of doubt upon their parentage. Really practical and scientific men cannot as a rule recognise them. Mistakes are so easy to make, and it is certainly a little curious that most of what we may term mythical Mules are produced by some such loose plan of mating. It would be wisest to have a definite method in trying for Mules in this way, by which the parentage of the young could be guaranteed.

It is a simple matter after all if one limits one's desire to, say, two different Mules in each season. If one really good bird is produced in each of two different varieties, the fancier has no cause to grumble. To try for two varieties, say we take the Goldfinch-Canary and the Goldie-Bullfinch. All you need do is to introduce the required number of hen Canaries and hen Bullfinches, and three or four cock Goldfinches, and rigidly exclude all other birds, and different sexes of these birds. Then, whatever young are bred, the parentage could be vouched for as certainly as if they had been bred by an exclusive mating in a cage. Practically all kinds of Mules and Hybrids could be bred safely in the same way. Hen Canaries, hen Goldfinches, and cock Siskins would make another interesting combination, as well as forming a pretty collection in themselves, and in this group, if one could not limit the desires to the two varieties, a cock Linnet or a cock Bullfinch—one or the other, but not both—might be added, and thus increase the chances of breeding four varieties, without seriously decreasing the certitude of identification. Still I should advise anyone to be content with two varieties.

A Heating Apparatus.

We spoke above of a heating apparatus, which should render the aviary we have been dealing with capable of successfully housing any type of bird. Fortunately, the materials for the aviary were placed in an ideal position for heating, if one desired to do so without in any way endangering the health of the birds. The system to which the situation lends itself so admirably is the flow and return hot-water pipes, with the furnace and boiler placed outside. A small apparatus could easily be bought to fit the place, but any handy man might construct the bed for the boiler and furnace himself.

If only the wooden shed part was used without the wire open-air flight, I should place this part against the wall at the right-hand side of the shed so that it fits into the angle formed by the front of the aviary and the wall. Of course, this must be built with bricks and mortar to avoid the possibility of fire. The boiler being fitted in that corner, the water pipes should be carried through the front of the aviary, along the end wall opposite the door, to the far corner; then, by means of elbow pieces, turn the pipes and continue them right across the wall which is opposite the window into the next corner, where the connection of the flow and return pipes may be made. By this means the pipes will go just half way round the room, which will be enough for all purposes.

To vary this plan to suit the double shed and open-air flight, as these extended notes have made it, will be quite easy by simply reversing the heating apparatus altogether. In this case you will build the furnace and bed for the boiler in the left-hand back corner, in the angle formed by the wall, and the end of the shed, on the same side as the door into the shed is placed, and carrying the pipes round the back of the house and the end opposite the door, and making the connection in the corner immediately opposite the door.

A Trite Note.

Looking over some old notes recently I came across a note from a prominent Yorkshire breeder which struck me as being so forcibly convincing that I feel it would bear repeating here at this time. Here it is:—"The Spring quarter came in auspiciously. March 22nd, thermometer in any bird-room 46 degrees. March 25th, 40 degrees, and wind blowing north-east." Then the writer adds significantly, "Look out for bright eggs and hens forsaking nests. I have not paired up yet. Shall see what first week in April does, and shall be content with two nests." Let the novice read and digest these laconic remarks thoroughly. They were written some few years ago, but are just as applicable to one year as to any other; and coming as they do from a tried and practical breeder and exhibitor of no mean standing should carry great weight.

The writer of this original note is indeed one of that happy class of fortunate fanciers whose position on a high pinnacle in the exhibition world was at that time and for many years before invulnerable; he was a breeder whom the novice fondly hopes to emulate in his most successful years. Yet let the novice note this well. The dates mentioned extend as late as March 25th, but this experienced breeder had not paired up his stock.

See how this compares with the tyro and the novice whose experiences are still somewhat of a primitive kind. This class of breeder very often feels he is "too late to start" when the middle of March has arrived. On the other hand, this expert and practical hand, who has drunk in success to the full, does not seem to mind it in the least if he gets his birds together during the first week in April. In a very great number of cases the novice has had a round of eggs from the birds by that time. Very often these eggs prove nothing more than mere eggs after incubation, being unfertile, and the energy of the birds has been taxed for no good result—in other words, simply wasted.

Mating Birds too Early.

One of the greatest mistakes the beginner could make is to let his patience become exhausted in waiting for the birds to get into nice fresh breeding condition before putting them together. It matters not what the date may be, whether it is the end of March or the end of April; if the birds are not ready it is utter folly to put them together just because the year is so far advanced on the supposition that being together will make them come forward faster. When it has any effect at all it is in practically every case to cause the hens to dally about and make a pretence of nesting, which never culminates in anything more serious than play or pretence; or perhaps nesting may be accomplished and a clutch, or several clutches, of clear eggs produced, which might just as well never have taxed the powers of the hen.

In the latter case it is the cock that may be suspected of being unfit, and a change to a good, vigorous, stout, singing cock might cause second and subsequent clutches to be filled. But in the vast majority of cases such as these, it may be taken as an axiom that if the birds have not shown signs of coming into breeding trim by the end of March, they are not really in sound, vigorous health, and in all probability there is a screw loose somewhere in the management. That being so, it certainly does not augur well for success in breeding with birds that are in a condition wholly antagonistic to such success.

The novice cannot, therefore, do better than start out with a grim determination not to mate up until his birds are ready, and in such an improbable circumstance as the birds not getting fresh all through the year, to defer any attempt to breed until another season. This last remark may seem a foolishly drastic one to an enthusiastic novice who is all agog to begin, but he may rest assured that it is for his own ultimate good to observe it. Not all temperaments can continue to persevere in the face of a bitter disappointment, so it must be a wise policy to avoid disappointment as far as possible.

A Difficult Question.

To what extent the pedigree of given birds should be taken into account when mating up stock is a question which often arises. It is eminently a difficult one to reply to off-hand. Quite recently we saw a reply to a query which had a distinct bearing on the subject, viz.:—Whether it is best to breed with a good prize-winning bird which had been bred off inferior parents, or a faulty specimen, which had come off typical parents that were great prize-winners. To reply to such a question fully, and with any degree of certainty, it would be absolutely necessary to know the antecedents of the parents in both cases. Thus, in the case of the inferior specimen which had come off good prize-winning parents, it would be necessary to consider first of all whether these winning parents were the product of a carefully arranged plan of pedigree breeding, and possessed in their turn good typical and winning parents and grandparents, and that the side branches—brothers, sisters, uncles, and aunts—showed a good proportion of fine specimens, and that the majority were more or less above the mark of mediocrity, with only a small proportion of inferior specimens. In short, it would be necessary to see that the bird came of a strain that had been bred up to that degree of perfection, when it is usually bred true to type. I should have no hesitation in mating the inferior bird with another which excelled in the particular points in which the bird in question failed.

On the other hand, if this inferior bird's ancestors beyond its own parents were also mostly of a poor type, so that the parents in question were merely a "stray chance," to coin a phrase, among a mediocre lot of wastrels, then nothing should tempt me to waste a season in breeding with the bird in question, and producing, as would be almost a dead certainty, a further lot of useless wasters similar in type to the bulk of its progenitors.

But in the case of a prize-winning bird which is bred off inferior parents, we should have to consider whether this bird is merely a lucky hit from a chance mating, or whether its inferior parents, although not good enough to win themselves, belonged to a strain of carefully bred birds of good type, and were in themselves simply a temporary reversion to an old ancestral type which helped to build up the strain. In the latter event I should not object to breeding with the bird mated to any good, all-round specimen of a suitable type, but, for choice, I should prefer going back to the same strain and mating such a bird with a good, all-round specimen which was also either an aunt or an uncle, as the case may be, or a cousin of the bird. By going back into the same strain in this way after the temporary reversion of the parents of the bird in question, you will be most likely to fix the type that has been formed anew, and prevent this chance tendency to reversion breaking away and becoming permanent, which would inevitably result in the rapid degeneration of the strain.

(To be continued.)

Yorkshiremen Discuss the Length of the Yorkshire Canary.

Experts Debate, and the "Shorts" Have it

After the Norwich Club business had been disposed of, at the meeting called for the purpose at Bradford on March 14th, a discussion on "The Length of the Yorkshire," ensued, Messrs. Shackleton and H. W. Battye taking opposite sides. Mr. Sunderland (Chairman) gave Mr. Battye preference, probably on account of his being armed with the shorter weapon.

Mr. Battye opened his remarks by stating that he was on the wrong side of the hedge, and that his offer was in reality a slip of the tongue. What he had meant to say, and what he had wished to say, was that if any individual would take the "short" side in a discussion, he would take the "lengthy," but having been caught napping, he would have to make the best of it. However, in his opinion, if the members of the various societies would only discuss the matter and get to the bottom of the question, then if the standard was not what was desired, steps could be taken with regard to it. He did not see that there was anything wrong with it. Few birds, if any, were over the standard length, and fanciers would be acting unwisely if they did anything to alter that standard.

The Standard Considered.

At the commencement of the Yorkshire Union's career the standard was formed in order, not to lose the long birds, but to stamp out the strong, coarse-feathered, ugly ones that some were showing at that time—birds that were deficient in type, position and quality, these being the most essential points of the true Yorkshire Canary.

In regard to judging to the standards of the specialist clubs, Mr. Battye thought that if a bird met the requirements as to condition, type and quality, and was not too much on the long side, he should put it in and leave it to other exhibitors to object to it if they thought it was over standard length. If, however, the bird was coarse, large-bodied, with slovenly wing carriage, it should certainly be left out. No judge who knew his work would put in a bird on account of its length alone. He often got blamed for putting long birds in; but fanciers should remember that a bird of 6¾ inches in length (fair measurement) was a big one, and it was hard to leave out a bird on account of length alone, if good in all other properties. He, at least, did not like to leave such birds out.

Type and Positio Essential.

Mr. Battye spoke strongly on the matter of type and position. Many birds, he said, had been put in at this season's shows that utterly failed in position, and as 20 points are allowed in the standard of points for position, he thought it wrong that they should win. What he liked was a bird that stood in the position of the hands of a clock at five minutes past seven, not those that were what he termed the ten minutes to four birds. He had also heard many complaints of drop tails. Many were, however, at the other extreme, standing across the perch with tail sticking up between the wings. Others had snaky and flat heads. All these defects were as important as length, that, in his opinion, not being of such vital importance as some would have them believe.

The bird of type, position and quality, should prevail, length being of quite secondary importance. In fact, the standard only allowed ten points for length and symmetry, and on this alone quality and position should rule. Judges now went in more for type than they did years ago, at the time of the formation of the Union, and the Union had done much good work in connection with the Fancy. Mr. Battye closed with the remark that he could not keep on his own side of the hedge.

6¾ Inches a Normal Length.

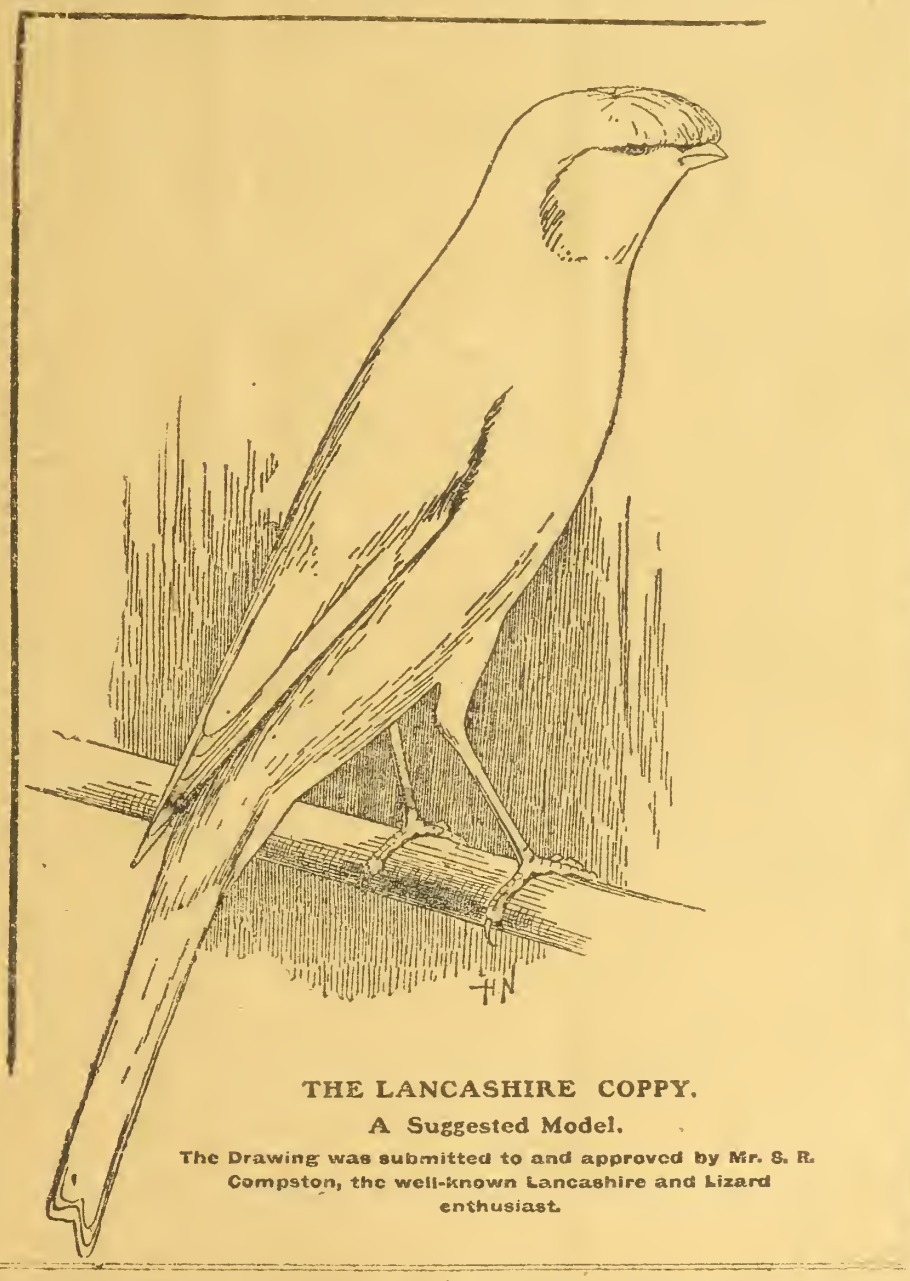
Mr. W. H. Shackleton sets little store upon his propensities for public speaking, and craved indulgence from those present, asking them to take the will for the deed. Proceeding, Mr. Shackleton stated he had been connected with the Fancy (not always Canaries) for from 30 to 40 years, and had spent 20 or 30 years in trying to reduce size, and 10 or 11 years in trying to increase size, so that he could claim some little experience at both ends of the matter.

In his opinion, it was the Southern fanciers who were trying to upset the Yorkshire people, who had been sailing on for a number of years. Very little fault could be found with the birds shown, and those people who complained were those who thought that if the shorter ones were going they would have a chance to win, never thinking that those who had the longer ones also had the shorter ones. In breeding any stock, strict note should be made of the restrictions of the laws of nature, and any fancier ignoring them would have to pay the penalty sooner or later.

Most novices wanted plenty of length, and he himself, in his novitiate days, had birds fully half an inch longer than he had to day; but they did not possess either the quality or style required. In his opinion the fixing of the normal length at 6¾ inches, "not over," was a wise and far-seeing policy, but the mode of measurement was a trifle uncertain. You can measure a horse as it stands, he said, but you cannot measure a bird.

What about the Minimum Length?

If the standard were to be strictly adhered to, a minimum length should also be made.



THE LANCASHIRE COPPY.

A Suggested Model.

The Drawing was submitted to and approved by Mr. S. R. Compston, the well-known Lancashire and Lizard enthusiast.

We heard a lot about the maximum, but the minimum was never mentioned. We could not breed all birds 6¾ inches long, nor yet use all stock birds of 6¾ inches and even then 6¾ inches was only approximate and should only be adhered to in a literal sense, not to exact wording of rule. If larger birds were required and length was to be the chief characteristic, the Lancashire Plainhead would have to be used to keep it up, and this would necessitate the keeping of extra stock birds.

There was no need to bind the judge, and, moreover, to do so was a great injustice, and ought not to be. Also there was no need nor yet any reason why they should be bound down to 6¾ inches. The open door should be as before. Some imagined that large exhibition birds could be bred at will; but no man could go beyond the normal size for any length of time, and birds, in his opinion, were never shown above 1-16th or 1-8th at most over standard length. One standard one type, and we should always try and breed them as long as possible, but those which come unevenly balanced must be thrown out. Fanciers who breed for length only must get their coarse and ugly birds, and they may do it at once with the Lancashire. There are a few isolated cases where "ugly birds" have been put in.

"My policy," he concluded, "is to keep to the standard as near as possible, and there's plenty of scope for work to maintain that size, with type and quality, with the birds I have to-day."

What are those 7½ inch Birds?

Mr. W. A. Cowgill: I quite follow Mr. Shackleton's remarks, and think it a pity we have not the 7½ inch birds from London here. I shall always try to breed as large as possible, and if Bradford cannot exceed 6¾ inches London cannot, especially taking into consideration size, with characteristic feather, position, etc. I have found it impossible to get the essential points on a bird over 6¾ inches in length. Generally such are coarse and drop their "wagger," and one can get a pencil between their wings and tail. Then the one who has to measure them can make them ¼ inch more in neck. Some birds, when caught, throw out neck, others draw in neck, and cannot be measured exact. But we all like a good big one in preference to a little one.

Mr. Chittenden: One thing I would like to ask: Which is easier to maintain, length or shortness?

Mr. Shackleton: I'm sure it is far easier to breed small. Fancy going to the Palace show and hearing visitors ask, "Which are the Yorkshires, and which are the Borders?"

Mr. Battye: I should like to be on the other side; providing 6½ inch birds could win, what price should we get? Plenty of little ones are perfect in quality. What we want to try and get is a good long bird. There is always room to improve and a good big one should always go in. In my opinion, if the standard length was altered in any way we should be standing in our own light and the bird would deteriorate and not improve. Birds cannot be put in for length only; the bird itself must also suit.

Mr. Chittenden: In applications for birds, what is usually asked for?

Mr. Shackleton: I have at present a letter from the South, from a gentleman who after 3 or 4 years' breeding is disappointed and must have length. He requires hen 7¼ inches long (langhter), plenty of leg, etc., etc.

"Pa" Speaks to the Point.

Mr. Sunderland now asked Mr. Mundell to say a few words. "Pa," like Mr. Shackleton, apologised for not being a public speaker, but he can talk when he gets off. Mr. M. thinks the question one of vital importance, and stated that the Yorkshiremen should endorse the standard of 6¾ inches length, and publish it for the benefit of the various societies having the Yorkshire bird at heart in different parts of the United Kingdom. The standard was brought up for the benefit of outside judges—to knock out the large coarse bird of Lancashire Plainhead type. His opinion was th[illegible] shire bird was a made bird, and th[illegible] to-day were qualified to judge t[illegible], etc. It would be a shame to limit birds to 6¾ inches. In fact, no birds shown to-day were above 6¾ inches. The 7 inch birds were not fine enough, and this was known 20 years ago, the 6¾ inch bird being then considered the finest bird and the best moulded, whereas the 7 inch bird was strong in back and had a broad chest. The Yorkshire Clubs would do well to endorse the 6¾ inch standard for the bird, and nothing else.

Mr. T. Ogden (Ogden Bros.): Many birds have been too short, particularly hens during the past season.

The Happy Medium.

Mr. H. W. Battye: When the standard was formed, 6½ inch, 6¾ inch and 7 inch birds were mooted as standard types, and they took 6¾ inches as the standard, and very few birds are over that length. The best bird should win, and those that are thought to be over length should be objected to. The birds to-day are truer to type than those of 20 years ago. Then, big, strong stuff was shown; birds, if not big, were of no use; meetings resulted, and the Yorkshire Union was formed, and a power of good has been achieved since that formation. The stamping out of the big, coarse birds was the chief object of its formation, but no satisfactory manner in which to measure a bird has been devised, and the 6¾ inch stands as approximate only.

Mr. Mundell: So many points are given to each, quality, type, wing carriage, etc., etc., that length and length alone should not win, but must be combined with the other essential points.

Mr. Hammond thought the Yorkshire standard should be strictly adhered to. Anyone, he said, who has seen the stock bird classes, cannot but feel that the true interests of the Fancy were kept at heart when the limit of 6¾ inches was fixed, as, in his opinion, the birds in the stock bird class could not compare in any respect to those shown in the regular classes. They lack,, he said, that symmetry of form so essential to the Yorkshire show bird, are coarser in feather, and lose many of the foatures so well liked in the bird of to-day.

Yorkshire Union Standard Approved.

A lot of minor points were discussed, but the general opinion was that the standard as laid down by the Yorkshire Union was all that was required; that the judges who officiated should do all in their power to judge on the merits of the birds as near to the standard as possible; and also that exhibitors should do their utmost in the same direction, by showing the birds that fulfilled those requirements, and should not expect one feature to outweigh all those other features of the "King of the Fancy," the Yorkshire.

Mr. Sunderland moved a vote of thanks to the leaders of the discussion for their services, giving as his opinion that the 6¾ inch bird was the bird to show, and that all should endeavour to breed up to the standard.

Mr. R. Halliday seconded, and the vote was carried amid loud applause.

Messrs. Battye and Shackleton responded to the vote, Mr. Battye apologising for the poor show he had made on the "short" side. Mr. Shackleton proposed, and Mr. J. Wilcock seconded, that the best thanks be given to Mr. Sunderland for the very able manner in which he had conducted the discussion, thus bringing to a close a very interesting meeting.

YORKSHIRE CANARIES.

HOW TO BREED, MANAGE AND EXHIBIT.

By H. W. Battye (President of the Yorkshire Union) Illustrated by Messrs. H. Norman and A. J. Simpson.

Price 1/- nett. Post Free 1/1½.

This book is absolutely the very best that has been put on the market. It deals fully with the Yorkshire and its sub-varieties, and should, without doubt be in the hands of every breeder of the bird of Grace and Beauty. It contains nstruction upon Pairing, Breeding, Moulting, Exhibiting and how to treat this popular variety in both health and disease.

Popular Book. Popular Price. 1/- nett, by post 1/1½.

"CAGE BIRDS," 154, Fleet St., London, E.C.

The Art of Cage-Making.

BY A. W. CURTIS.

(*Continued from page* 148.)

It is an easy matter to place a plane on a piece of board in a proper position, but it is not so easy to keep it there when in motion. There is the right and the wrong way of using a plane, and the wrong way appears to be more often adopted than the right one, especially by those having but little, or no knowledge on the matter of planing.

The Proper Attitude for Working.

Now to plane up stuff properly, one has to be master of his tool, that is to say, you must persevere to make the plane do as you want it, and not to leave it to chance to take off shavings, just where and when it likes. Always make it a point to keep well behind your plane when using it, and keep it as straight as possible on your board; see Fig. 25 and 26. Do not push your plane in a circular or curved direction, as if you were using a scythe to mow grass, for you cannot expect to get a nice level surface on your wood by adopting this method.

Always keep a firm hold on your plane when working it, putting a fair amount of pressure at front and back of same, and keep it close to surface of wood. Start to plane at end of stuff farthest from head of bench, and before starting, see that you have front of plane down quite flat on your wood, not allowing it to tilt up, or you will dub the end off your stuff. When finishing off other end of board, be sure to keep heel, or back end of plane, flat on surface, or you will again dub end off.

I would suggest to those not having had experience in planing up, to get a piece of soft pine, about three feet long by nine or eleven inches wide by one inch thick, and to practise planing up; never mind if you plane your board nearly all away, as it will be good exercise for you. By laying a straight edge on the edge of your jack plane across your board occasionally, you will be able to tell whether you are keeping your board nice and straight across it. If your straight edge rides on the centre, you will know that you require to plane more from where the straight edge rides. If, on the other hand, your board is hollow, you will have to plane more off towards the edges. If your board is of even thickness, mind not to take more off one surface edge than you do the other, or you will have your board feather-edged, that is, one edge thicker than the other.

Don't be afraid to extend your arms when planing; by this I mean, take off good long shavings, instead of hacking them off in short lengths, but in attempting these long shavings, don't lose control of your plane, by allowing it to jump, or you will find nothing but unsightly notches instead of the nice even surface so much desired.

The jack plane is used to take the rough off wood, and the smoothing, or hand plane, is to finish off with. You will find it necessary to have a little more iron out, or in other words, to set your jack plane a little coarser than will be required for your smoothing plane.

I would here advise my readers not to lose heart, if they find planing not quite so easy an occupation as they anticipated. It may appear quite easy when looking on, to see a joiner fetching off shavings with every stroke of the plane, but novices must not lose sight of the fact that the joiner's easy method is acquired by practice and a knowledge of how to sharpen and set his plane correctly. So a novice must not be discouraged if he fails in his first attempt to prepare his material with the finish of a practical hand.

Fig. 28.

On the Use of the Saw.

I will now proceed to give instructions to those not already in the know, as to the proper way to use a saw. This is a tool that has been used, at some time or other by most men, and I have no doubt but what the majority know that to cut lengthways, or with the grain, is called ripping, and to cut across the grain is called cross-cutting.

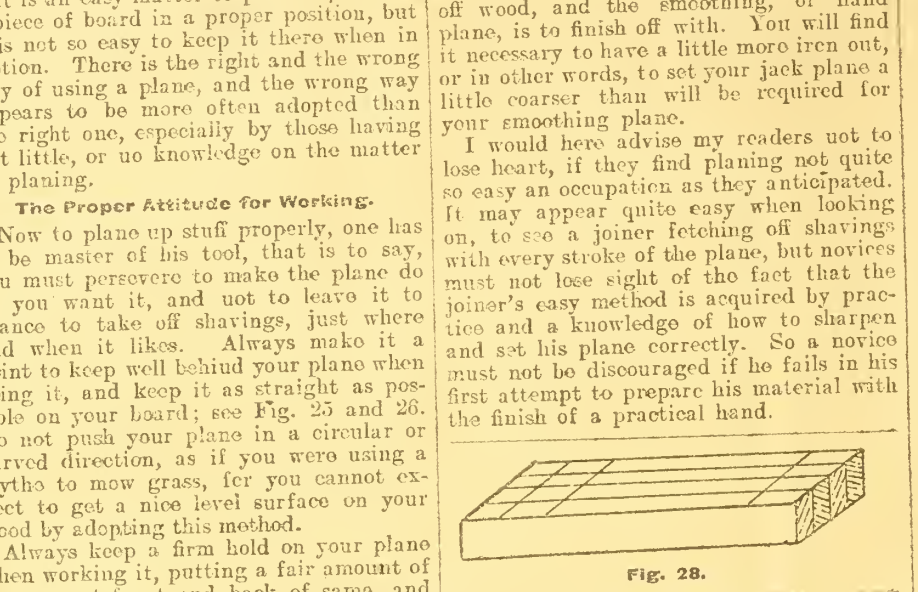
When attempting to rip a board there are not a great number of novices who can successfully cut down a line two feet in length, without running out of it, and when once out, will try all ways but the correct way to get right again.

When starting to rip a board, don't use both hands on your panel saw to start a cut, but with your right hand take a firm hold on handle of saw; your left hand should grip end of board, and your thumb should be raised so as to touch side of saw, and should act as a guide or fence.

Be careful to keep your thumb high enough up to clear teeth of saw, or you may find your wood stained with a colour you had not bargained for.

Having got your saw in the the right position, don't start with one mighty push as if you were going to cut half the length of your board with one stroke, but begin quietly, making sure to keep your saw as upright as possible. When sawing, if you find your saw running out of line towards your right, don't pull the saw over towards you to try and get in the line again, but gently twist the teeth of saw towards the line you have left, still keeping the saw in an upright position. Don't overdo the twist business, or try to regain in an inch or two what you have been losing in a foot, or you may damage your saw.

Here, again, a good plan would be for a novice to get a piece of board and put several straight lines down it, and to practise a few cuts before attempting to cut up good stuff. Any waste pieces of board, such as egg-box boards, will do to practise on, for either ripping or cross cutting. The same advice given for ripping applies equally as well for cross-cutting, but when marking off your board for cross cutting, use your long square and endeavour to keep to your lines, even if you are only doing practise cuts.



UPPER ROW: 1: Commencing a cross-cut. 2: Ditto, with a Back Saw. 3: Starting a Cut for Ripping.

LOWER ROW: 1: Method of using Brace and Bit. 2: Way to Hold 12 in. square on a flat surface. 3: Ditto, 3 in. square on edge of wood.

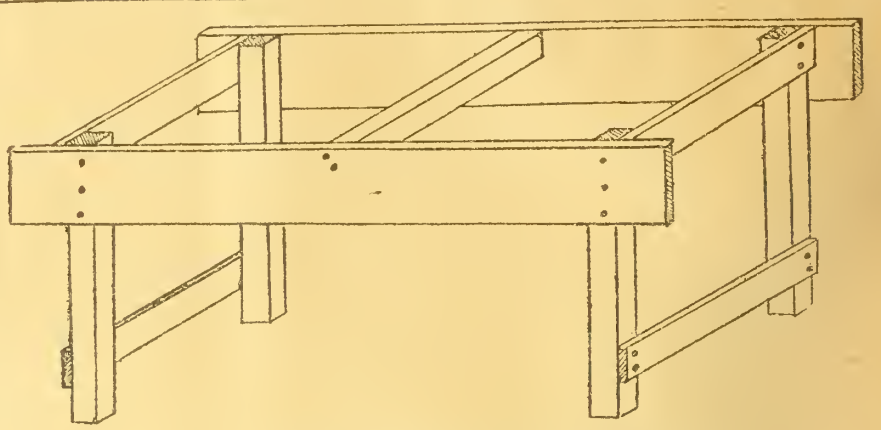


Fig. 30. Fitted Framework of Bench.

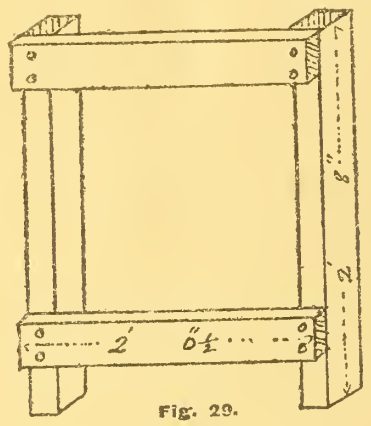

Fig. 29.

Concerning the Bench.

For the benefit of those wishing to make themselves a cheap bench on which to make their cages, I would advise them to have a bench about six feet long by about two feet two inches wide. This can be made very cheaply and easily by working to the following instructions. Of course, space will have to be taken into consideration, and it will be folly for a fancier to start making a bench without satisfying himself beforehand that he will have plenty of room to stand it in when finished.

It will require for the bench legs four pieces of 3in. by 2in. scantling, each piece two feet eight inches long; one piece for centre bearer, 3in. by 2in., two feet and an half an inch long; five 9in. by 1in. prepared, or planed boards, six feet long, three of these being for top and other two for sides of bench; two 9in. by 1in. prepared boards two feet and half an inch long, ripped down the centre to make four rails. As a rule, 9in. by 1in. prepared, when purchased, seldom runs more than $8\frac{3}{4}$ins. wide by $\frac{3}{4}$in. thick, so if legs are kept to width figured on sketch, the three $8\frac{3}{4}$in. boards together should be the exact width of board required to cover top of bench.

First of all mark off the length of four legs to the length given, using your square on face and edge; cut them off to squared lines, and then lay all four of them side by side, with 2in. edges uppermost as shown in Fig. 28. Next measure four inches up, for under edge of bottom rail; now put another mark, four and three-eights of an inch from your first mark, and then at top end measure and mark four inches and three-eighths of an inch down. Now take your 12in. square, and place on your wood, making sure stock of same is touching side of wood next to you, and then put a pencil mark across all four pieces. See Figure 28: this will show you required position of rails.

The next thing is to screw or nail your cross rails to legs, as shown in Fig. 29. I would advise the use of screws in preference to nails, as by using screws the bench could at any time be taken to pieces without damage being done to same, it being very convenient for storage or removal to be able to easily take out the screws.

Put one screw in each end of your two rails and then take your square and place stock of it on top rail, allowing the blade to run in same direction as leg. By doing this you can see if leg is at right angles or square from rail. If out of square, rack it until it is square, then put in your other four screws, as shown, when it will be ready for your side boards.

Having got your two pairs of legs ready, stand them on one side. Next place your two side boards together, face side to face side, keeping them quite level at end. Now measure six inches from each end, make a mark and square over as before. This will give you the distance side board has to project or run past legs. Now take your legs and lay them on their sides, then lay on your side board and put in screw nearest to top edge, making sure to keep mark on edge level with outside of top rail. Now try on your square and set legs square from side rail, and then put in your bottom screws to hold legs in required position.

The centre screws can now be put in. Turn the other sides of legs uppermost and proceed to put on your other side board, going through the same routine as you did with your first. Having finished this, turn your frame over on its feet, then equally divide distance between legs and screws in centre bearer, as shown in Fig. 30, and the frame will be ready for top.

This should be screwed down on to cross bearers, also along edge of side boards. It will require sixty-three 2in. No. 12 screws to put bench together properly, and it would be as well to have a twist gimlet (a little finer than screws), with which to bore your screw holes. Use your rose bit and brace to countersink for screw heads, and your wide pointed screw-driver to turn in screws.

By nailing two or three rough boards to the bottom edge of side rails, a very useful shelf can be formed on which to put your tools when not in use. If required, a drop door could be hung to bottom edge of shelf, and with a lock at top would form a very neat lock-up for tools.

The Feeding and Rearing of Young Canaries.

By C. E. BROWN.

A Lecture Delivered before the Members and Friends of the Bristol C.B.S. on March 1st.

I will endeavour to do my best to inform you how I rear my young birds at that most critical period from the nest. My chief aim is to keep up the spirits strength and vigour of the birds I intend to breed with; yet, on the other hand, I take great care not to strain them, or get their nerves too high by overfeeding on soft food, until they are busy feeding their young. It is not so dangerous then, providing it is wholesome and sweet; but even then I feed very judiciously.

Treatment of Egg-bound Hens.

When I am expecting my hens to start laying, I watch them very closely, and if I see one showing signs of distress I give her a little maw seed last thing at night, and if she is no better in the morning, I treat her for egg-binding in the following way. I very carefully catch the bird and, taking her by the flights and tail, blow up the feathers and drop a little sweet oil into the vent. I also scald a small piece of bread in new milk and give to the hen, putting plenty of castor sugar over the bread. This has generally put matters right with my hens.

I don't like steaming the hens, if I can possibly avoid it. Last year I had one hen that I was bound to steam, and although I held her over a jug of boiling water (with, of course, a piece of muslin over the top of the jug to catch the egg) for fifteen minutes she could not pass the egg. So I took her in my left hand, put a drop of sweet oil into the vent and then placed my finger and thumb on either side of the bird's abdomen behind the egg, gently pressing towards the vent, and so got the egg away; it was a large double yolk egg and very thick shelled.

If any of my hens lay a broken eggery, I keep the eggs, as she lays them, in bran, turning them twice a day. Of course I put a dummy egg in the nest in place of each egg taken away, and if she finish laying her batch of eggs in a week, I allow her to sit. If not, I mark the eggs she has laid and place them under another hen or hens.

I always take the eggs away as soon as they are laid, putting a dummy in its place, until the third egg is laid, keeping them in bran and turning them every day. On the evening of the third day I return them, and by adopting this plan I find the chicks hatch out all together and therefore get their proper share of food from the parents, which they would not get if hatched two or three days after the first chick.

A Remedy for Unfertile Eggs.

If I get a batch or two of unfertile eggs, I part the birds for a few days and feed up again in the usual way. I give them a few extra dandelion leaves, and also from 7 to 10 drops of tincture of steel in their drinking water. I consider this the very best remedy for unfertile eggs.

I always feed on plain Canary seed when the birds are sitting, until about two days before the eggs are due to hatch. Then I give them a little richer food on the evening prior to the date on which the eggs are due to hatch. I put a little hemp seed in the cage and also a very small quantity of egg food.

Great care should be taken in boiling the eggs intended for the birds. I never use a new laid egg if possible; I keep them a few days before using same. I boil them for twenty minutes, and allow them to get quite cold before using them. But if you have to use a new laid egg, you must boil it for at least half an hour, as it takes much longer to cook than an egg which has been kept for a day or two.

When the Young Arrive.

When the young arrive I give the yolk of egg only for the first two days, and on the third day I give equal parts yolk of egg and bread crumbs or Osborne biscuits. Afterwards I use the whole of the egg and its weight in bread crumbs and Osborne biscuits put through a Sandiford mill. The last two years I have used, by way of a change, a certain prepared food advertised in the Fancy Press, with very good results. In fact, I think it is much better than home-made egg-food for rearing young birds as it is not so rich. I also give plenty of crushed hemp and rape, with, of course, plain Canary seed hung on the cage all the time.

When the young are three days' old, I stop the crushed hemp and give it whole, as it keeps the old birds off the nest longer, they having to crack the seed. And this gives the youngsters a little more fresh air than they would have if the seed were crushed for the old birds. I also add a little more bread or biscuit to the soft food and a teaspoonful of castor sugar. On three days a week I mix a teaspoonful of cod liver oil with the soft food, and also a little maw seed.

I give my birds fresh soft food three times a day; the last feed I give them is at night, so that they have food to feed the young with as soon as it is light in the morning.

Soft Food and Green Food.

I very seldom make my soft food up more than once a day; every morning I make up the day's supply, and I have never found it go sour. But perhaps I have an advantage over some of you, as I have a very cool dairy (next to where the milk is kept) in which I keep my soft food. Of course it would never do to put it in a dairy where the milk was cooling, or it would soon go sour. I never leave it in the bird room, and it is a great mistake for anyone to do so, even if they make it twice or three times a day.

For green food, which I start to give the birds on the third day, I have never found anything better than dandelion and chickweed; these I give my birds quite fresh three times a day. Here, again, perhaps, I have an advantage over the town fancier; I never place the green food in water inside the breeding cage (as some fanciers advise), but gather it fresh every time I require it, taking care to wash it and thoroughly dry it with a cloth before giving it to the birds.

If I find a nest of youngsters not going on as well as I should like them to, I transfer them to another hen or hens, if I have others about the same age. Another good idea and one which I have found very useful in the case of a bad feeding hen, is to scald some rape and mix with the soft food. Last year I had two hens start to feed immediately by this method, when they would not do so on anything else.

Sweating of Young.

If I find a hen sweating her young I immediately give her a pinch of Epsom Salts in her drinking water and take the cock bird away from her. If she still continues to sweat her young, I lift her off every day. But I find you have to be very careful with such hens, as frequently the real cause is nervousness, which makes them sit very closely on their young; and the greatest tenderness and patience must be bestowed on such hens until they get over such nervousness.

Some hens are always (by some means or other) pulling their young out of the nest, especially those who jump off the nest instead of steadily rising off the nest. I always look into the bottom of the cages when I enter the room, and if I find a chick there I hold it in the palm of my hand and continue to breathe on it until I can see some signs of life. I have often restored to the nest a chick which, when I took it from the bottom of the cage, was quite cold and appeared to me to be quite dead.

Sometimes you will find the young make no progress, although the old birds pay them every attention. The very best thing I have found for these delicate and wasting youngsters is a few drops of Parrish's Chemical Food mixed with their egg food, and although given through the old birds, I have found this very beneficial. In giving this I have often saved a valuable nest of youngsters. If I find the old birds are feeding mostly on hard seed, which, of course, the young cannot digest properly, I scald the seed for them one day and soak it the next.

Some Hints on Feeding.

One very important thing with me at all times of the year is the use of clean and fresh water. During the breeding season I change the water twice and sometimes three times a day. Perhaps some of you have noticed when you have given fresh water the hen comes down and takes a slight bath, which is found to be very refreshing to her.

When the young are ready to leave the nest I place a numbered ring on each bird's leg and enter the number on the ring in my stud book. Of course, previous to this I number the old birds and also the breeding cages. By these means you can easily keep a pedigree of your birds, which you will find very useful later on. When the young leave the nest, which is the most critical time of their lives, I draw the wire slide between them and the old birds, for should they be something out of the common and get plucked by the old birds, they will be of no use for showing purposes that season. After the wire slide has been drawn between the old and young birds a few days I place a little crushed hemp inside the nursery cage, together with a little plain soft food, for them to learn to feed themselves.

Plain Food for the Young.

As soon as the youngsters can do for themselves I give them very plain food for this reason: The food they have been having has been masticated for them by the old birds; therefore you have to be exceedingly careful. If I use egg I only use half to quite the same weight of bread crumbs and Osborne biscuits that I have been using to a whole egg. But, as I have mentioned, I have used with success a prepared soft food, and I much prefer it for the young birds as it is more natural, and nothing like as rich as egg. I also give them crushed hemp, whole hemp, and Canary seed mixed together, for a time.

I do not force my birds on to hard seed and I certainly think it a great mistake for anyone to do so. I get my youngsters on to hard seed by very slow degrees, as I have found, to my sorrow, that young birds, when they commence to crack the seed, never know when they have had enough. This, of course, makes them very thirsty, and they drink more water than is good for them, the end being inflammation of the bowels, and more than likely a dead bird or two.

I continue to give my young birds soft (or egg) food, very poorly made, until they become thoroughly accustomed, by very slow degrees, to hard seed. In fact I really never leave off giving soft food, and since adopting this way of feeding I have not lost a single young bird, after they have left the parents, through overfeeding.

(To be continued.)

HOUSE'S

CANARY MANUAL

Price ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition, entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." MR. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

The War against Rats.

Rats having committed somewhat serious depredations on the underground railways in London, a campaign has been set on foot with a view to their extermination, and we understand that hundreds of tubes of Danysz virus are being laid down by a special staff of men after the day's traffic is finished. The vessels and docks of several leading steamship companies are also being treated by the same method. Sir James Crichton-Browne, in a letter to "The Field," points out that the use of virus is more human than any other method in vogue for the destruction of these mischievous creatures.

My Experiences in the Hobby.

By DAVID PEDLOW.

Since I was a boy I have always been fond of animals, birds, etc. This was unfortunate for the poor birds, for they came into my possession when I was very young and did not quite understand that the little things needed every care and attention to make their little homes a pleasure. I have always inclined to keeping foreign birds, and have had a good many pass through my hands. I have found a lot of very useful information in CAGE BIRDS week after week.

How to breed Budgerigars; what birds one should keep together in aviaries, etc., are questions that are frequently cropping up. Breeding Budgerigars is the simplest thing in bird life. The beginner should always start with a couple or three pairs of good, strong, healthy birds. But I should advise getting the cocks and hens from different dealers, as in-breeding with birds I strongly object to, after getting your stock. Of course, I am writing of bird-breeding in aviaries. Put up a number of husks and always see that you have two husks to one pair of birds. Give plenty of good, sound seed, such as millet, Canary, hemp, and corn; I always found my Budgerigars very fond of the latter, and being so cheap, it saves a lot of the other seeds. Keep a piece of Cuttlefish in the aviary and also plenty of sand and clean water. Some say that Budgerigars don't drink, but I have seen mine drink.

Often they are very fond of grass in the ear when ripe, and also of spray millet; it is a pleasure to watch them clinging to the spray and picking out the seeds.

Success in Breeding.

My first season in breeding these lovely birds was a successful one. I reared from three pairs about 45 young ones, and I believe I had only two deaths in that season. One hen I found egg-bound, and as she had hidden behind a box, I did not find her until she was nearly dead; death occurred shortly after. I have never experienced much trouble in the way of egg-binding in my aviaries, and find no difficulty after applying one of the usual remedies. I prefer to put a little oil on the vent and then hold the bird over a teapot with hot water. I have a soft, porous cloth to rest it on, and I cover it with a glass dish, so that I can see how it is doing.

Anyone wanting a pet bird could not do better than get a young Budgerigar just beginning to feed, and with a little patience one can teach it tricks. I have often stood in my aviary with 10 young Budgerigars on my hands, one on each finger. It is quite a treat, too, to watch them in the grass. I used to take them out and let them off in the garden before they could fly very well. But, mind you, should you try this, keep a watch on them, as they have a habit of crawling into holes, and if the grass is long, you might have some trouble in finding them.

My next season was also a lucky one; I reared about 30 young ones by two pairs. They laid from five to seven eggs to a clutch, and as they begin to sit, after they have laid the first egg, the young appear in successive days, so that the first hatched are about a week old before the last appear. Although the early hatched ones seem to fill the husk in a short time, I never found a young one killed in the nests.

A Varied Collection.

I might say I always kept in the same aviary three pairs of Cockatiels, two pairs of which reared young just as well as the Budgerigars. I had wooden boxes put up for these, which seemed to suit them very well. They gave no trouble with the same kind of food in the aviary. I often gave them a piece of loaf bread, sometimes dipped in water, which they liked very much.

The other pair of Cockatiels laid eggs and hatched out young, but something was wrong with these, as they died in the nest after a few days. I think this hen was a bad feeder, as she always had most of the feathers off her breast; otherwise she seemed healthy enough.

I also had Weavers and Bullfinches in this aviary; the Weavers never made any attempt at building in my aviary. The Bullfinches did, however, and brought out young which died, I think, for want of more natural wild seeds and buds. Speaking about the Weavers, reminds me of a visit I paid to the late Mr. Abrahams. I was purchasing some Weavers from him, and he advised me to get some wool of various colours, cut into short lengths, and tie it up loosely about the aviary. The Weavers, he said, would use it instead of hay, etc., and would weave most beautiful nests. I have not tried this yet, but I hope to when I build an aviary for Weavers alone, as I believe the other birds would only pull these nests to pieces.

Eggs, but no Young.

Other species I have kept are the Zebra, Green Singing Finch, Gouldian Finch, Avadavat, Silver Bill, Nun (various), Orange Cheek, Corden Bleu, Pekin Robin, Ribbon Finch, Bengalese, Java Sparrow, Ring Neck, Rosella, Rose Cockatoo, the various Doves and also the Californian Quail.

I have obtained plenty of eggs from these, but have only successfully reared Zebra Finches. I have also had the Yellow Budgerigars, but the pair I had were not quite up to the mark, as out of six eggs they only reared one young one. The cock bird died, and the hen paired up with a Green Budgerigar, with the result that in one nest three young Green and two young Yellow Budgerigars were hatched out and reared, which disputes the theory that, when paired together (green and yellow), they will breed back to the green only.

I found the above-mentioned Finches quite hardy; they lived well out of doors, but I never kept them out in winter. I must make the Corden Bleu an exception, as I always found it delicate. I have bought many pairs of these birds, with the usual result—they shortly "kicked the bucket."

I have also kept the usual run of British birds, but have not tried my hand much at breeding. This year I have a lot of hen Bullfinches, with which I intend to run Greenfinch, Redpoll, Linnet, Siskin, Canary, and Goldfinch cock birds in an aviary in order to try my luck at Hybrid breeding. I have also paired together hen Redpoll and cock Goldfinch, hen Bullfinch and cock Siberian Goldfinch, hen Canary and cock Green Singing Finch and also hen Canary and cock Redpoll.

My two favourite birds, a cock Siberian Goldfinch, which I have had for over three years, and a cock Green Singing Canary, are both beauties.

Pekin Robins at Large.

I have also reared and stocked Golden Pheasants, Amherst and Reeves; these I found very beautiful, and no trouble to keep, the usual fowls' seeds and plenty of green-food being their staple diet.

Before closing, a word or two to the inexperienced with regard to purchasing will perhaps be useful as coming from one who has been "bit." I find the deposit system works exceedingly well, but some dealers will not send on this system. There are amongst dealers very many fair and honourable men; these I find out; after which I will buy from no others.

My aviaries have no doors leading directly out; I have to pass through a summer-house, which arrangement I find is very useful, never yet having had one bird escape. I gave liberty to three pairs of Pekin Robins last summer, as an experiment. I kept one in the aviary however, for a few weeks, so that the others hearing its call, always came about the aviaries. After I liberated it, I saw them for about two weeks, after which I lost sight of them altogether. I should like to know what happened to them, and whether they would live in our winter. No doubt being soft-billed birds they would find no difficulty in getting food about gardens in the summer.

HARMLESS TO OTHER ANIMALS.

The Strange House-Keeping of my Firefinches.

By G. CHATTO.

My aviary is twelve by sixteen by six feet in dimensions, slightly raised and covered in at one end. It faces south. I have in it, besides a lot of other different kinds of birds, a pair of Fire Finches. When I bought them, the cock was out of colour, and had lost a lot of feathers, which have since grown in red, so that he is now half in colour and half out!

Not a Marrying Sort.

He evidently had a great desire to set up housekeeping, but his little wife had no thought in that direction. My little cock Fire Finch commenced by building a nest in a cokernut shell. Perhaps he thought his little mate might change her mind about nesting, if she found a snug and cosy little house all built ready for her. He flew on to the entrance of the nest calling to her; he crept in and out of the deftly woven passage way, and I do not know what he did not say to her in his little birdie language. But all to no purpose. She took no notice of him.

What was he to do? Ah! now he has it. She does not like the situation. He immediately pulled the carefully-made structure all to pieces and started to build in another shell. This little game was repeated about a dozen times I should think. Sometimes he would sit in his nest for quite an hour or more, but he could not persuade his gentle wife to take possession of it. I really felt quite sorry for him, although he seemed to enjoy himself.

Papa is pleased.

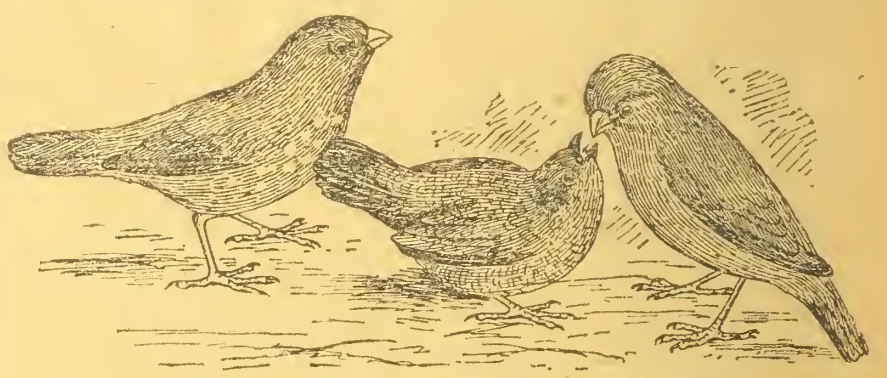
One day while feeding the birds in the outdoor aviary, I picked up a small white egg, the shell being so transparent that the yolk inside made it look pink. The bird that laid it evidently had no nest and did not wish to have one. I did not know what to do with the egg, so I put it into the Fire Finches' nest and waited outside to see what would happen. The Fire Finches were hopping about together, foraging at the time. Presently the cock bird found a pretty green feather, picked it up and flew to the nest with it. He looked rather surprised at first, and then went in to inspect.

By-and-bye, he came out again, chirping joyfully. He seemed very pleased and quite excited: he hopped round his astonished mate and flew to and from the nest taking in feather and hay. Of course, the poor bird thought his wife had laid the egg. The hen still took no notice of the nest. I do not know what the cock thought about her, or whether he thought about anything at all but that egg—anyhow, he incubated it himself.

I never saw the hen bird ever go near the nest during incubation. She may have slept in it; that I do not know, as I never go near the aviary at night, for fear of disturbing those birds which have eggs and young, and it being dark or nearly so they might not find their way back again.

What it Was.

Well, I am losing the thread of the story. The little one hatched out. The male bird fed and tended it most carefully, and when it was twelve or more days old I noticed the hen going into the nest two or three times, and after a day or two she seemed to take as much interest in it as the cock bird did. I, too, was interested in it—in fact, quite anxious to see what kind of bird it was going to be! The first hint was given to me by its lead-coloured legs and feet. You see, I looked at it every day to see how it progressed. Then the brownish feathers were covered thickly with narrow darker lines, the underparts showing a rosey pink. The feathers round the eye appeared crimson.



Firefinches Feeding Young St. Helena Waxbill.

Is It Unique?

There was no doubt left now; it was a St. Helena Waxbill. At length it left the nest. It is full-grown now, and flies about with the other birds. It has become so accustomed to me (looking at it every day, as I did) that it is quite tame, and allows me to stroke or handle it, without taking much notice of me. It is not fond of me personally, but has grown used to me as it has to its feathered companions in the aviary. It's real father and mother took no more notice of it than they would of any other new arrivals in the aviary.

I have heard of the eggs of certain birds being exchanged for others or other birds' eggs being added to their own and the result being satisfactory, but I have never heard before of a case similar to this which I have just related. I wonder if it is unique?

NOW IS THE SEASON.
BUY THE STOCK BOOK.
The Latest Publication for the benefit of keepers of cage birds. Is framed on novel lines and contains many entirely new departures. Is absolutely indispensable to everyone interested in the hobby.
COMPILED BY G. E. WESTON.
MAKES BIRD BREEDING EASY.
This "BREEDING ROOM REGISTER & BIRD KEEPER'S ACCOUNT BOOK (copyright) offers in a handy form a means of keeping—
The complete pedigree and description of every bird in one's room.
A full record of the season's breeding experiences.
An account of every young bird reared, and how it was disposed of.
A register of one's doings at the shows (the most complete and useful yet devised).
A cash account for the year.
A profit and loss account of the season's proceedings, and a balance sheet showing how much one has invested in the hobby.
A series of Registers will thus furnish a concise record of the career of a fancier as a breeder and an exhibitor from year to year, or over any number of years.
Many useful Emergency and other Hints will also be found in its pages.

"Who said Cats."

Some Facts about Macaws.

By FRANK FINN, B.A., F.Z.S.

The Great Macaws, for all Macaws are not large, some being only as big as the common Grey Parrot, may be said to represent Nature's last word in the evolution of colour-effect in animals, for no other living things display such brilliant hues distributed over so large a surface.

Take the ordinary Red Macaw (such as is depicted with such fidelity on the coloured plate, skilfully caught by the artist in a characteristic and delightfully pleasing attitude)—what a wonderful bird he is, coloured in the three primary hues of red, blue, and yellow, and those alone—not a feather of any meaner tint, except a few spots of green sometimes diversifying the great blaze of yellow on the wings. No other bird in the world can show such a display; the Peacock's purples, blues, and irridescent copper-greens are dull by comparison, and though the Gold Pheasant has the Macaw's colours, and a far richer and glossier quality of feather, Nature seems to have run short of the material to finish him off, and so he ends in a speckly-brown tail which rather comes as an anti-climax to the glowing gold of his silky crest.

A Living Banner.

Then the Macaw, unlike these, his rivals, is a bird of powerful, lofty, and vigorous flight. No groundling like them, he haunts the tops of tall forest trees, and flaps, a living banner, above the forest from one haunt to another. Sometimes he may play and wheel about in the air with his friends; at other times the pair alone may be marked high overhead, too far for their splendid vesture to be seen, and heard even before they can be seen at all by reason of their loud screams. Some faint idea of Macaws in flight may be formed by watching the Zoo specimens in their great aviary on the Canal bank; but even in this large space it is evident that they cannot get fairly under way, and need more room to show their wing power to advantage, though the mere heavy flight from one side to another is a revelation of colour-effect.

Not a Match for Cocky.

I have noticed that in this aviary the Cockatoos are masters of the Macaws; the long-tailed bird is much too slow in his movements, and his length of rudder makes it a dangerous handle for ill-wishers. Once I saw a mischievous Lemon-crested Cockatoo seize a Blue-and-yellow Macaw by the tail, and in spite of the piercing shrieks of the victim, who could not get at his aggressor because of the said tail's length, though he did his best to turn on him, bite off about a foot of the feathers attacked. However, on the whole, the large Parrots have done well together and the show has been very fine, though just now there are not many Macaws on view as some have been sent away. I noticed that some of the Red Macaws, after a season outdoors, showed a yellow lacing on the red feathers, especially about the head and neck, evidently the effect of climate, although they were in fine feather, and stood the cold well.

Macaw Mules.

The Blue-and-yellow Macaw has been bred season after season by an amateur in France, who kept his birds in an outdoor aviary; and some years ago some one in Italy raised a brood of hybrids between a Red and a Green Macaw. These found their way to our Zoo in time, and fine birds they were, of large size and great vigour of voice. They followed the green parent in colour, except in having the underparts red, thus showing the cross well. Mule-breeding in Macaws ought to be a really high flight in aviculture, for goodness only knows what colours one might get by crossing, say, the Blue-and-yellow with the Red, or either of these, or the Green, with the Purple Hyacinthine species. There should be a fine fight of colours in the crossing of the Green and Purple kinds!

Management of Macaws.

Macaws are not difficult birds to keep if you have room, and if your neighbours will stand the noise. They are too big for cages, for in no reasonable-sized one can they get wing exercise, and should always be chained, unless, of course, kept in an outdoor aviary, which should have a shelter shed and wired flight so arranged as to give as much flying room as possible. Given space for exercise, they are quite hardy. If they show signs of wanting to breed, a barrel with a good-sized hole in one end and plenty of sawdust inside should be provided as nesting quarters and fixed high up. Although there is no sex difference in plumage, the smaller and rounder head of the hen makes it possible to pick out pairs; young birds can also be distinguished by their darker eyes. Of course a young one is best for a pet, but sex does not matter if one wants a talker, as hens will talk as well as cocks. Macaws seem generally to speak plainly, and talk freely. They need large grain, such as maize, oats, and sunflowers as food, and also nuts, with any green food and fruit available. Water should not be forgotten, and they will benefit by a bath in a shower of rain.

The Leading Species.

Two Red Macaws are imported, the Red-and-yellow (*Ara macao*), and the Red-and-blue (*A. chloroptera*). The former is the one usually seen; the latter is larger, darker red, has green instead of yellow on the wings, and some lines of dark red feathers on the bare face not found in the other. Then there is the splendid Blue-and-yellow (*A. ararauna*), the tightest and glossiest in feather of all of them, and perhaps the most general favourite. The great Hyacinthine (*Anodorhynchus hyacinthinus*), with his self-purple robe, is rare; he has a prodigious beak, and makes no more difficulty over Brazil nuts than a Canary does with hemp. Rare also is the Green, or Military (*Ara militaris*)—though why on earth this is called Military I can't imagine, for I do not know of any nation which favours grass-green as a uniform. These are the most familiar kinds, and a splendid series they form; all come from the warm parts of America, where they are among the greatest of Nature's ornaments.

The most delightful and appropriate Postcards for Bird Lovers on the Market are those published by "Cage Birds."

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "The Eyrie," Salisbury-road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

The Pairing Season.

Winter still lingers, with sharp frost and snow. All nature is ready to exhibit the beauties of spring as soon as the weather permits. No doubt the continuance of severe conditions has saved many a lovely flower from being cut off by later frost, and many a brood of feathered songsters from an early death. One cannot but notice the progress made by the wild birds towards carrying out their summer task. Upon every side we see them in pairs, and if during our rambles we disturb a single specimen we quite naturally look round for its partner. This condition of bird life was very apparent the other day when we stood at the corner of a wood quietly watching the doings of the inmates. Up the green glade the Thrushes were busy among the grass; they were apparently single birds, searching where the few dead leaves had been scattered by the wind across the clearing. But later, when they were disturbed, the half-dozen birds quickly took flight, settling in pairs out in the open field. In the bushes at the foot of an elm tree the Greater Tit, in all the glory of his spring dress (and few birds show more beauty of colouring), was busy as usual. We say "as usual," for one never sees a Tit actually still for any length of time. Other birds will rest and preen, and bask in the sunshine, or in some sheltered nook, for quite a long time, but the busy Tit never has time for idling; he has generally something on hand, and must be an enormous eater, for he appears to be constantly in quest of food. He keeps up a chattering note, his mate answering from the higher branches of the tree. These birds generally manage to rear big families, and to launch them safely upon their own little sea of life. And yet they never appear to increase. There are always a few round the gardens, and a family party or so to be met with in the woods. Who or what are their enemies? They are certainly small birds, but are quite equal to the task of taking care of themselves, although they occasionally form a titbit for the Sparrow Hawk; but not more so than other species. Probably they are short lived, and so the young birds simply fill up the vacancies constantly occurring. We have no means of knowing the actual life of a wild bird, and possibly, for all we know to the contrary, the period of existence of some of the smaller species may be short, much shorter than we imagine. The Chaffinches just now frequent the hedgerows and small plantations. As we wander up the cart road by the edge of the wood we see them, for some distance ahead, shuffling along the ground just out in the field; but as we near them they quickly return in pairs to the shelter of the trees. There is something about the habit of the Chaffinch when on the ground which makes him very different to other birds. He has a peculiar shuffling gait, a cross between the mouselike creeping of the Dunnock and the hop of the Finch. So different is this to the bearing of other Finches that one never has any difficulty in identifying the bird, even when the light is bad so that his colour is not discernible. Further along the road we disturb numerous other birds, the wing-flapping of the big Wood Pigeons startling many smaller species. A tiny Wren accompanied us for some distance and then returned to a big heap of refuse at the corner of the field, where we found him an hour later. Upon the hill there is an acre or so of rough uncultivated ground, where many of our rarer Warblers can be found during the summer. At this visit a single Goldfinch was the only find. He was feeding in the long grass, and rose with his usual twittering call and flew off with that peculiar jerky flight so characteristic of the species. Across the lavender fields we put up a huge flock of Linnets; they will probably nest in this rough patch as they did a few years since, when every bush and bramble contained the cosy home of this little songster.

NOTES AND QUERIES.

The Eagle and its Chick.

The Golden Eagle, and other large rapteral birds which lay two eggs, rarely hatch more than one. If one parent is killed or trapped the survivor will rear the nestling alone.

London Pigeons.

It is said that the London Wood Pigeon is not the same as our wild Ring Dove, but a Foreign species, brought over by the Duke of Edinburgh after a visit to the Czar of Russia. He brought several pairs with him, it is said, which were liberated in Hyde Park. It is also said that these birds are more stoutly built than our own wild ones, although similarly marked.

Rare Variety of the Redwing.

The Rev. Murray Dixon, in the "Field" records the fact that on December 15 he shot a beautiful variety of the Redwing. The plumage was of a pale biscuit or fawn colour, but with the usual markings very pale and indistinct. The flank feathers, however, retained the usual orange-red colour. Varieties of this colour are rare, but the Hon. Walter Rothschild has two similar specimens in his museum at Tring, and Mr. Frohawk states that he has also an example of this variation.

A Colony of Owls.

We clip the following interesting note from a contemporary:—A short time ago I visited the hamlet of St. Botolphs, near Shoreham. In the tower of its quaint old church, standing next to a large farm, is a colony of short-eared Owls. It is a charming sight to stand close by concealed in an old outhouse and watch these graceful birds on a moonlight night seeking their food of mice, etc. It is delightful for bird-lovers to know that two old ladies who reside in a little cottage close by the church most carefully guard these Owls, and woe be to the collector who, gun in hand, should attempt an assault on them. Surely this shows what can be done even in these days for our feathered friends. It is a useless errand, therefore, for anyone to go in search of these birds, so would-be collectors can stay at home."

Return of the Whinchat.

I saw a splendid Whinchat to-day, March 13th, and thought it might interest you to know, writes Mr. G. E. Smith. (This is certainly rather early for this bird, as he does not generally arrive until April.—H.N.)

A Grey-backed Warbler in Kent.

Mr. J. B. Nichols, in a contemporary, gives a short account of a male Grey-Backed Warbler (*Ædon familiaris*), which was killed at Hythe, Kent, on July 15, 1907. This makes the first recorded occurrence of this species in Great Britain.

Bird Life in Italy.

Martins, Swallows, Nightingales and small Warblers are regularly caught and killed while migrating across Italy, and at other times the country is almost denuded of feathered life. At last some of the scientists are beginning to recognise the importance of protecting these benefactors of the agriculturist, but so strong is the habit of bird catching during certain periods that it is very doubtful if even the Government of the country can do much to stop this wholesale destruction. Anyway, it will possibly take years to entirely prevent it.

Nesting Boxes.

Now is the time for bird lovers to fix up boxes for the use of the wild birds visiting the gardens. Many people are under the impression that birds have no difficulty in finding suitable spots to nest in. But this is quite a mistake, for during the Summer we frequently see them attempting to build in places quite unfitted for the purpose, and we frequently hear of them selecting old hats, boots, etc., which they would not do if Nature's nesting sites were more plentiful. Almost any kind of box will do for the purpose (those with a sloping lid to be preferred). They should be placed out of the reach of cats and somewhat sheltered from the elements.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

THE FIRST STEP.

In every walk of life it is THE FIRST STEP ALWAYS THAT COUNTS ! Take your first step in the right direction and your right destination will quickly loom ahead.

The First Step that any beginner in the pleasurable and profitable art of Canary Breeding ought to take is to PURCHASE

THE BEGINNERS BUDGET

consisting of FOUR BOOKS ABSOLUTELY INDISPENSABLE TO THE TYRO and completely illuminating the darkness of ignorance in which he may otherwise wallow.

THESE FOUR BOOKS have been written and compiled by men who have devoted their whole lives and every moment of their time to the study of the problems that beset the breeders of Canaries and other birds. Inside the eight covers you will find

ALL YOU REQUIRE TO KNOW

a grand encyclopedia of bird fanciers' knowledge.

The price of THE BEGINNERS' BUDGET is the moderate one of

(POST FREE) 2/6 (POST FREE)

Here are the names of the Four books and something about each of them:—

Canary Breeding for Beginners - - Post free, 7d.

By Claude St. John.

A practical, up-to-date guide to the cult of Canary breeding, designed specially for the use of the beginner in the hobby. It contains many helpful illustrations, and deals very fully, and in an easily-understandable manner, with the choice, sexing and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the details and difficulties likely to confront the breeder.

House's Canary Manual - - - - Post free, 1/2

This is a thorough and practical guide to the general management and breeding of Canaries, written by a well-known expert and judge. It contains chapters dealing fully with the breeding, etc., of every member of the Canary family, and an illustration of each bird, by the master Canary artist, Mr. H. Norman, reproduced in the finest art style. There are also exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge approached by no other book of its kind at the price.

Cage Birds 1908 Annual - - - - post free, 7d.

The Standard Guide to the Cage Bird Hobby is a title bestowed upon the ANNUAL years ago. And the 1908 edition merits it more than any previous volume. Revised and brought up-to-date from cover to cover, with a lovely coloured plate and many full-page art illustrations, and crammed with valuable articles and unique and helpful features, it is the finest value for money ever offered lovers of birds. Canary, British, Hybrid and Foreign bird enthusiasts alike will find it a Complete Guide to the Fancy.

The Stock Book (Our invaluable "Breeding Room Register.") - - - post free. 7d.

A well-known fancier has said of it:—"It makes bird-breeding easy." This book is one no breeder of birds can possibly afford to be without. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred—keep account of their strong and weak points. It contains both Pedigree, Breeding, Young Bird and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6 according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

APPLIANCES.

OUTDOOR aviaries, bird houses.—Sussex Portable Building Co., 138, Lewes-rd., Brighton.

SELECTED moss picked and washed large bag, 1/-, enough for the season.—Jim Bona, Silver-hill, Otley.

HANDSOME set breeding cages, 3, 6 or 9, slide partition, folds, 7/-; bargain. Miles, 13, Pump-st., Nottingham.

BIRD nests, Dewars unrivalled, leather, lined with Swansdown, 1/6 dozen, post free.—2, St. Patrick-square, Edinburgh.

W. PIPKIN, Higham-rd., Chesham, Bucks., agent for Dobbie's gold medal grit for cage birds, sample 7 lb., 8d., 14 lb. 1/3.

HANDSOME Crystal Palace 4 ft. mahogany aviary; cash offers wanted.—13, Colville-terrace, Bayswater, London.

CAGES.—Four double-breeders, in good and clean condition no reasonable offer refused.—Sprules, 119, Choumert-rd., Peckham.

CRYSTAL Palace aviary, 10/-, large wire flight 4/-, or two 12/-, worth double; approval.—Kearl, Woodstock, Ringwood, Hants.

TEN good breeding cages complete 2/-, 2/6, 3/- each; can be seen after six; cheap to clear.—Lugg, 5, Lonehurst-rd., Lewisham, S.E.

RED mite traps, catches them in thousands, 1/2 dozen, post free; cages, nest pans, etc., send stamp for catalogue.—Rees, Glantaf, Aberdare.

HAND-MADE Palace aviary, much stronger than machine-made cages; three compartments, quite new, three feet long, 15/-.—J. Phillips, Portland-rd., Frome.

A. Fox, St. Helens.

FOR JOINER-MADE CAGES CHEAP.

Breeding cages, single, 18 inches long, 15 inches high, 1/9; 26 inches by 15 inches by 11 inches, 2/10; double, 36 inches by 15½ inches by 11 inches, 4/6; 3-compartment, 40 inches, by 15½ inches, by 11 inches, 5/6; any size made equally cheap; remember made by experienced joiners only, these cages have given satisfaction in the past, and are much improved this season; list of 51 sizes free.—Pass, Cage Maker, 48, Annesley-rd., Hucknall, Notts.

BREEDING CAGES.

There are breeding cages and things they call breeding cages, but I am putting on the market a well finished cage, planed outside and inside, not left rough inside to breed red mite, but made as smooth as the outside, polished outside, mahogany or black enamelled blue inside, fitted with sand trays, food hoppers, nest boxes, sliding partitions, and loose wire fronts, 18 in. 2/-, 20 in. 2/6, 24 in. 3/-; double, 30 in. 3/6, 33 in. 4/-, 36 in. 4/6; all kinds of cages or cases made for the trade.—J. Ashmore, 167, Heath-st., Birmingham.

BREEDING CAGES.

Best quality only, joiner-made, from well seasoned wood, fitted with sliding divisions, with improved arrangement for feeding young birds; loose fronts, sand trays and seed hoppers, stained and polished mahogany, prices from 2/6 each; tinned wire, 2/- half-stone, punched bars 1/- dozen; sanitary earthenware nestpans, with wire hangers, 2/- doz.; thick felt linings for nestpans, 10d. dozen; seed and egg mills, 1/6 each; cutting nippers, 1/- each; send for price list to The Sheffield Wire and Cage Co., 47, Surrey-st., Sheffield.

THE "DURABLE" WIRE FRONTS.

Finish that cage you are making in the best possible way, by using a "Durable" front. Remember you cannot get this quality for lower prices than the undermentioned. Nothing used but the very best punched bar and 16-gauge wire (not pinwire). Prices: 12 inch, 6d., 15 inch, 7½d., 18 inch 9d., 21 inch 10½d.; all 12 inches high; fronts with four crossbars, 14 inches high, 15 inch 9d., 18 inch, 10½d., 21 inch, 1/-; show cage fronts (Norwich, Crest), 4d. each, any size quoted for.—J. Walmsley, 6, Brand-st., Nottingham.

3/6. DOUBLE BREEDERS. 3/6.

36 in. long by 18 in. by 9 in., blue inside, black out, complete with nest boxes, sand trays, sliding division, forming flight cages and fitted up with loose punch bar, wire fronts; every cage washable; made by experienced cage-makers, who know how to make cages. It is impossible for all the imitators combined to produce anything approaching the cage I send out. Have one from elsewhere at higher price, then one of mine, and put them side by side. I shall be perfectly satisfied with the result. Remember, I lead the way for others to follow me.—G. White, 122, Great Hampton-row, Birmingham.

BREEDING CAGES.

Best and most convenient cage on the market. Being a breeder myself, I know what is required. Beware of cages 8 in. wide; they are useless. Note my sizes and compare with others. Two compartments, 35 in. by 15 in. by 11 in., 3/6; three compartments, 53 in. by 15 in. by 11 in., 5/-; four compartments, two top and two bottom, 7/-; four compartments, 70 in. by 15 in. by 11 in., 7/-; six compartments, 10/-; eight compartments, 12/6; all the above are fitted loose fronts, sliding partitions, nest boxes, seed hoppers, etc., and are 11 in. wide. Customers own designs executed. Large bundles moss and hair for nesting, 6d., 9d., 1/-, post free.—Kendrick, Carpenter, 14 Cook-st., Coventry.

BIRDROOM APPLIANCES.

Compare our prices with others. Enamelled tin seed-boxes, fitted with loose glass fronts; 2-inch, 1/3; 2½-inch, 1/6; 3-inch, 1/9; 4-inch, 2/3 per dozen; wire top baths, 3/3 per dozen; glass top baths, 4/- per dozen. Special quotation for quantities. Punched bars, 40 inch lengths, 10d. dozen, 9/- gross; best drawn tinned wire, 4d. lb., 7 lbs. 1/9; also white sanitary nest pans, 1/6 dozen; wires for same 7d. dozen; linings, 7d. dozen. Deposit with CAGE BIRDS, or cash with order. Illustrated price list on receipt of two stamps; free on receipt of memo. and trade card.
R. KREMNER, 96, Gt. Moor Street, BOLTON

RINGS The Oldest Ring Maker in The World.

Don't place your order for rings until you have seen my New 1908 RING, which will be ready in about a week's time. They will have no numbers to fill up with dirt, same as all other makers. I have had my rings copied and have now improved on them, and this new ring is the neatest and best ever put on a Canary's leg. I sold 60,000 of my old rings last season and hope to sell double the quantity of my new rings this season. Prices as before.

SAM DRAKE,
HALEY HILL, HALIFAX.

Wrigglesworth & Sons

J. SANDIFORD, Bird Specialist and Judge,

Telephone 440. PRESTON, LANCS.

MATTHEWS, LINNET KING.

Gentlemen, exhibitors and contest singers, I have the largest and best stock of selected British than any two dealers in England, contradiction defied; over 1,000 in stock, every kind of British you require. I have a grand lot of Linnets, with nut-brown backs, well pencilled, at 1/6-2/-, also a few special giants, beautifully pencilled for keen competition, 3/- each; also a grand lot ready for muling, real giants, with nut-brown backs, blood-red breasts, in full song, 2/6, bargains; also a larger stock of singing Linnets than any man in Englaud, over 200 in stock, been specially trained under my old noted Cheshire champions, 2/- each, with polished singing cage, instructions how to feed, a packet of special mixture, 3/6 lot, bargains. I have a grand lot of house-moulted Linnets, in full song, been specially trained for contests, can win at 4/6, 5/6 and 6/- each, these special birds will soon win for their owners. Goldfinches, Goldfinches, I have a grand lot, with deep square scarlet blaze, well buttoned, and mooned, 5/- each, for muling, 4/-; large yellow Greenfinches, 1/- each; hens, 6d. each; Bramblefinches, real toppers, for show, 1/6, each; Bramblefinches, real toppers, for show, 1/6, each; I have a few grand house-moulted Gold-2/- each. I have a few grand house-moulted Goldfinches for sale, all bred mules last year, and ready for nesting, at 6/6, 7/6 each, bargains; Linnet and Canary, 4/6; a few house-moulted Linnets, bred mules, with hen Canary, 6/0 the pair; Linnets and Redpoll, 5/6; Greenfinch and Canary, Siskin and Redpoll, 5/6; Greenfinch and Bullfinch, 3/6; Twite and Redpoll, 2/6; Greenfinch and Bullfinch, 3/-; Bramblefinch and Chaffinch, 2/6, or any kind of British you require. Plenty in stock; state your wants. Gentlemen, read what others say: From Cowle Cottage, March-by-Sea. Sir,—kindly send me your special guide. The Linnets I got from you have made champions. Perfectly satisfied my custom is yours; from Mr. Snowden to Linnet King. From 30, Frederick-st., Seaham Harbour. Sir, send me your special guide at once. The Linnets I got from you a few months back, they are the best I ever had and the largest I have ever seen. You are honest; wishing you every success. From J. Wilkinson, to the Real Linnet King. Gentlemen, if you want to win in contest singing, or showing, place your orders with me for any kind you want birds, sent by return on 7 days' approval; cash or deposit.—Matthews, Bird Specialist, 44, George-st., Hyde, Cheshire.

HARRY ALLEN,
THE ORIGINAL LINNET KING.

Champion of all Champions, patronised by all the leading exhibitors, mule breeders and contest singers. Beware of spurious imitations. As usual, big fine cock Linnets, well pencilled, very tame, 1/6, 2/-, 2/6, 3/- each; cocks, sure mulers, 2/6 each, cock Linnet, singing beautifully, with singing cage, a packet of special mixture, instructions how to feed, 3/6 lot; house-moulted cock Linnets, singing hard, finger tame, can win, 8/6, 10/6, 15/6 each, with contest cage; house-moulted Linnet and Canary, bred mules, 10/6; cock Linnet and Canary 5/-; cock Greenfinch and Canary, 3/6; cock Bramblefinch, house-moulted, sure muler, 5/6; Redpolls 1/6 each. I have a few cock Chaffinches to clear; been caged since December, singing hard, in excellent feather, 1/6 and 2/- each; Rose Cockatoo 10/6; German Bullfinches 0/6 each, one hand-reared 10/6; Java Sparrows, 2/- each, 3/6 pair; Cockatiels 10/6 pair; green cock Budgerigars 4/- each; 4 packets of my special mixture, 1/-; Book of Secrets 1/6 post free. Don't have any imitations. Kindly read these. 3, Princess Terrace, Southend. Sir,—Birds arrived quite safely and quite satisfactory, indeed, I am quite pleased with them.—W. Raines to H. Allen. 17, Wilson Street, North Shields. Sir,—I must say you have sent me three handsome birds; I am very pleased with them, and thank you very much for your honesty.—R. Watson to H. Allen. 18, Milton Street, Edinburgh. Sir,—I am very pleased with bird; thanking you for sending me such a nice one, and quick despatch.—R. Cairncross to H. Allen. — Central Boot Shop, Forfar. Sir,—I thank you very much for the very nice bird which I received from you. I think you have been most generous in your dealings with me. I shall have much pleasure in recommending you to my friends. — A. M'Kay to H. Allen. 60, Rudmore Road, Landport, Portsmouth. Sir,—Received bird quite safe; am quite pleased with it; it started singing the day it arrived.—C. Clark to H. Allen. Victoria Road, Aldershot. Sir,—Received the two contest Linnets, and am quite pleased with them; kindly send me the following. — A. Vint to H. Allen. I have hundreds of testimonials. Every bird I send out gives satisfaction. Please give me a trial order and you will be delighted, as hundreds of others have been. I have hundreds of every kind of British in stock; been specially selected and caged months, not fresh caught rubbish, direct from the catchers' nets. All my birds are on seven days' approval; cash or deposit; state wants; correspondence a pleasure. — Harry Allen, Bird Specialist, City Aviaries, Beckett-st., Leeds.

Approval, cash or deposit. Give me a trial. Satisfaction guaranteed. List free.

R. HANFORD, Osmaston Road, DERBY.

J. C. BARNES,

149, Duncombe-st., Walkley, Sheffield. Challenge Cup winner 1905, 1906, 1907, having finally selected own breeders, has still few grand pairs to spare, 30/- upwards; also few choice hens, yellows, 15/- to 20/-; buffs, 10/- to 15/- each; one or two cocks, rather on the small side, but bred off big stuff, 10/- each; every bird guaranteed my own breeding; typical and full of colour and quality; inspection invited; approval with pleasure.

GRAND LARGE NORWICH.

Notice.—Write or call, and see my splendid stock of Norwich. These are grand, large, round, chubby Bullfinch type birds. I have a large stock of every colour. Every bird feather like silk and in splendid condition. Every cock warranted singing; all on six days' approval, on receipt of P.O., or deposit note. Yellow cocks, 8/6, 9/6, 10/6, 12/6, 15/6, buff cocks, 8/6, 9/6, 10/6, 12/6, 15/6, Yellow hens, 3/6, 4/-, 4/6 5/-; buff hens, 3/-, 3/6, 4/-, 4/6.—Note the address, Wm. Shaw, 97, Essex-rd., Islington, London, N. Five doors from Cross-st., green cars pass the door.

SILK'S CHAMPION NORWICH.

More winners produced from this strain than any other. Birds sold by me have won at most of the all-England shows in keenest competition, and a great number were bred from stock pairs supplied by me. Some of the champion exhibitors owe their success on the show bench to this wonderful strain; procurable only from me. I can supply the champions and give satisfaction, and I will place the novice and amateur on the same footing by giving him exactly the same high-class Norwich at moderate prices. My pairs at 40/6 have no equal, and cannot be bought elsewhere at double; in fact, every bird I send out is double value. Why be disappointed with unreliable strains? Pairs properly matched by an expert and breeder. Special attention given to see that the cock and the hen have the necessary points to breed really high-class specimens. All orders have my personal attention, and fanciers can rely upon getting exactly what they require at moderate prices. Giant stock pairs, 20/6 to 40/6; Yellow cocks and hens, 12/6 to 25/6; ditto Buff, 10/6 to 22/6; approval to any part of the British Isles. A few choice Crests, Crestbreds and Yorkshires. Cream of the fancy reasonable.—A. E. Silk, Whitstable.

MACKLEY BROS.' Gigantic Stock of Canaries

Read the following. One of the latest to bear out our statement from numbers received during the last few days:—

Stoke-on-Trent. Have been taken in so many times.

Stoke Workhouse, Loudon Road, near Newcastle, Stoke-on-Trent, 17th March, 1908, writes:—I am thinking of trying you (Mackley Bros.). I am sorry to say that I have been taken in so many times It don't give me much faith to trust anyone. I want a pair of good Norwich that will do me some good. Yours truly, Thos. Finikin to Mackley Bros.

(After Order Executed.)

The Best he has seen for a very long time.

Stoke Workhouse, London Road, near Newcastle, Stoke-on-Trent, March, 21st, 1908. Birds arrived in the pink of condition this morning. They are a grand pair; your dealing is most straightforward. I can assure you they are the best that I have seen for a very long time. They look like a pair which should turn out some very good youngsters. Thanking you for sending such a pair. Yours faithfully, Thos. Finikin to Mackley Bros.

It is a well-known fact no person can give the quality we can. All our customers are more than surprised at the marvellous value we are sending.

The safest and most reliable house in the Kingdom. Awarded 9,000 prizes. A world's record.

Under the distinguished patronage of H.I.M. The Empress of Germany and The Sultan of Turkey.

Postal and Telegraphic Address: **MACKLEY BROS. (Jacob Mackley), NORWICH.**

National Telephone Nos, 44 and 844.

W. RUDD, THE Bird Specialist, **NORWICH.**

J. BERTIE,

cage bird judge, has one of the finest collections of Norwich in the Fancy, but at present has not much time to exhibit. But can supply sure winners and stock birds at very reasonable prices. Those short, stout, deep-chested ones, with tail and wings to match, good size, with grand head, and well filled in neck. The kind that do win under a judge that knows his business; stamp; approval with pleasure.—The Cottage, Steedman-avenue, Mapperley, Nottingham.

I do not claim to have all the Birds, what I do claim is that I have a lot of the best Typical Norwich it is possible to Purchase.

If you pay higher prices elsewhere you cannot get better birds. My prices are within the reach of all, and when you take the quality of the birds into consideration, you will be convinced they are by far the best and cheapest. Having over 1,500 birds to select from, I can supply you with odd birds or pairs that will give you every satisfaction. Call and inspect my stock: or let me send you birds carriage paid on 7 days' approval, at my risk.

I have a large stock of Good Typical Norwich in sound Healthy Breeding Condition. **Norwich Plainhead Cocks 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-** each; **Norwich Hens, 3/6, 4/6, 5/6, 6/6, 7/6, 10/6** each; Properly matched Breeding Pairs **8/6, 10/6, 12/6, 15/-, 20/-.** Special Bargains in Show Specimens and Pairs to breed sure winners, **25/-, 30/-, 35/-, 40/-** per pair including winners. **Crests and Crestbreds.** Cocks **8/6, 10/6, 12/6, 15/-, 20/-** each. **Hens 6/6, 8/6, 10/6, 12/6** each. Properly matched breeding pairs **15/-, 18/-, 20/-, 25/-, 30/-.**

18, New Road, Winning, Durham. March 14, 1908.—The Norwich cock you sent me is a very good Bird; you will have more orders from me.—W. Thompson to Miss Storey.

We have won thousands of prizes.

NORTHERN AVIARIES,
ORMSKIRK ROAD, PRESTON.

CAN I SEND?

Can I have the pleasure of sending you a genuine, highly-trained Roller, carriage paid to your address, on seven days' approval, at my risk? I undoubtedly have the largest stock of singing Canaries in England. High-class St. Andreasberg Rollers in full song by day and artificial light, with long, waterbubble runs, harp, bell and gong notes, long, deep, hollow rolls, etc., etc. Prices according to quality of song, cocks, 8/6, 10/6, 12/6, 15/- each; pure Roller hens, 3/-, 3/6, 4/- each; properly matched breeding pairs, 11/-, 12/6, 15/-, 17/6. I also have a large stock of specially selected cock birds, in full, loud, free song. The right birds where a lot of noise is required. There are a lot of really good cheap songsters; cocks, 6/9, 7/6, 8/-, 8/6, 10/6 each. Neat, joiner-made breeding cage, with loose wire front, all complete, ready for use, 2/9 each; travelling cages for birds, 3d. each extra. I have many thousands of unsolicited testimonials from delighted customers open for your inspection, of which the following are samples:—"Albany House, Coleshill, Llanelly, 14th March, 1908.—Bird arrived safe, in perfect health and condition. It is singing lovely, and is a credit to you; it would be cheap at double the price you charged. I am highly pleased. E. Sutton to Miss Storey." "76, Earnsham-lane, Conisbro', Rotherham, 13/3/08.—Roller arrived in pink of condition, and is a champion songster, his notes are simply beautiful. M. Birch to Miss Storey." "Union-st., Gt. Aberspchan, Mon.—I require another Roller for a friend. He has some good birds, but would exchange any two for the one you sent me. I won first and special, value £3 3s., with many points to spare, for best songster, and have had numerous inquiries for price of bird, and have referred them to you for the same quality of Rollers as mine at reasonable prices. J. Jones to Miss Storey." "High-row, Fair Hill, Haltwhistle.—Received H.M.R. on Thursday, and must thank you for same. It is an extra good bird for the money, commencing to sing as soon as unpacked. There is no need to wait for approval. H. Pearson to Miss Storey." "55, Old rd., Ashton in-Mansfield.—The Roller is a little champion. I would not like to part with him for twice the price I paid you for him. Mrs. Johnson to Miss Storey." I send all Canaries carriage paid on seven days' approval, at my risk. New illustrated price list of birds and cages; send stamp for postage; neat travelling cages 3d. extra.—Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

CHAMPION ROLLERS.

Notice.—I have a splendid consignment of those extremely musical St. Andreasberg Rollers; these are splendid day and gaslight songsters; they are delightful, with their deep bass rolls, hollow rolls, sweet silvery trills, water bubble runs, piccolo trills, bell, sharp and gong notes, etc.; these are splendid quality, and are certain to please you; all on 6 days' approval, on receipt of P.O., or you can deposit the amount with the Editor, 8/6, 10/6, 12/6, 15/6, hens to match 3/-, 3/6, 4/-, inspection invited. — William Shaw and Son, 97, Essex-road, Islington, London, N.

TO WISE MEN

a word is sufficient. I have just received my last consignment for this season of the celebrated "Leipzig" Rollers, of which I am the sole importer. All are in magnificent condition, fit for immediate breeding, and cocks in full song, with long, hollow and double rolls, hollow bell rolls, waterbubble runs, soft roulades, sweet, silvery trills, bell, harp and flute notes, etc., etc., and are guaranteed entirely free from Titlark or any other harsh notes whatever, prices, cocks in full song, 7/6 and 8/6 each; Schoolmasters, 10/- and 12/6 each; hens, guaranteed same strain, 3/6 each. I have also received a few special "Seifert" contest Rollers, in full song. These birds are exceptionally soft and mellow in song, and excel in the hollow bell, deep bass, and shaking rolls, and among them are birds which have formed part of contest winning teams this year in Germany, prices, cocks 15/-, 17/6 and 21/- each; pure Seifert hens of same strain, 4/6 each. Anyone desirous of improving their stock, or of securing a Schoolmaster of the purest song, should try one of these contest birds, as nothing finer has ever been imported into England at double my price. The following few testimonials will prove quality of my birds:—"12, Bantling Old-row, near Annfield Plain. March 7th. Sir,—Roller arrived safe, none the worse for his journey, although it is snowing heavily here. He sang half an hour after arrival, and is a cruiker. Thanking you for way you packed it. Yours, B. McKenna." "6, Long-lane, Dublin. March 4th. Sir, —I am pleased with Roller, which arrived safe, I think it only right that you should know that I tested him side by side with other Rollers that cost three times the price, and he is by far a better bird than any of them. He started singing within ten minutes of arrival. You certainly deserve to be better known. Yours, M. Hopkins." "Bermuda Cottage, Warren-rd., Guildford. Sir,—Rollers arrived safe. I am more than pleased with them. Thanks for sending such good songsters and straightforward dealing. Yours, T. Moore." "5, Branch-st., Higher Ince, Wigan. Sir,—Birds to hand. I thank you very much for the way you treated me. I went to station as you advised me to, and when I got there I could find neither stationmaster nor porter, but I could hear my bird singing packed up in the office, and he has sang ever since. Yours, W. Kaye." "15, Opposite Ashbrow Mills, Bradford-rd., Huddersfield. Sir,—Received bird safely on Saturday. He is a most splendid Roller, of excellent quality. His voice is quite rich and mellow, Thanking you for same. Yours, W. Tinker." "1, Fort-st., Roath, Cardiff. Sir,—Received bird quite safe, and am pleased to state I am quite satisfied, and will tell my friends where I bought it. Yours, J. Thomas." "Barrow-in-Furness. Sir,—Roller arrived safe. Many thanks for such a splendid bird. He commenced singing directly I put him in another cage; he is also singing splendidly while I am writing to you. I shall give you another order shortly, as your birds are as good as the advertisement. Yours, John Williams." "Harryville, Ballymena, Ireland. Sir,—Roller arrived safely, and commenced singing directly. Allow me to thank you for kind treatment and honest dealing, and I hope to circulate the quality of your Rollers in this district, as I am perfectly satisfied. Yours, Frank Falls." "138, Brettell-lane, near Stourbridge. Sir,— The Leipzig Roller I had from you a few weeks ago is a splendid bird, singing his lovely notes night and day. Thanking you for prompt attention. Please send following. Yours, J. Hill." "1, Albion-place, Pontnewynydd. Sir,—Please send me following. I am pleased to say the Roller I had from you last year is a splendid bird, and much better quality than I had from a prominent dealer for almost double the price. Yours, S. Plaisted." "27 St. Helens-rd., Dorchester. Sir,—Have instructed Editor to pay you deposit. In one word, the bird is excellent. Many thanks. Yours, Hy. Batchelor." "Dinnington. Sir,—Birds give every satisfaction. My friend is very fond of the cock bird, he is singing all day long. Yours, Wm. Kenny." "2, Hill Cottages, Killiney, co. Dublin, Ireland. Sir,—Please send following. The Bandmaster you sent arrived safe, and I am well pleased with him. Yours, J. Colclough." "28, Sussex-rd., Ford, Devonport. Sir,— I had a Bandmaster from you in December, 1905, and am glad to say that his song is in perfect condition still, singing day and night. Yours, W. Davis." "3, Commercial-row, Kirkstall, Leeds. Sir, —I am well pleased with the Seifert contest master you sent. He is singing nicely. Please send hen to match. He is such a sweet singer that I am going to try and breed a few like him this season. Yours, W. Watson." "Ashleigh House, Poeklington. Sir,—Roller arrived safely, and I am very pleased with him. He sings nearly all day, and I thank you for quick despatch. I shall certainly deal with you in future. Yours, A. Dunwell." "85, New Village Creswell, near Mansfield. Sir,—Bird to hand and I must say he is best Roller I have ever had, and I can assure you that you will get my future orders. Yours, J. Brewster." "Victoria Building, Hillstown, Bolsover. Sir,—I have had three Rollers from you, and am satisfied with all. Please send another Bandmaster, also hen to match. Yours, J. King." Later Mr. King again writes: Sir,—Received Bandmaster and hen in pink of health, and am pleased to say am highly satisfied with them." "Inglewood, Heves-lane, Alderley Edge. Sir,—Roller arrived safe and began to sing within half an hour. He is the sweetest songster I ever heard. No approval is needed with such birds as these, as they are what you represent them to be. Yours, G. Birken." Please note all testimonials are entirely unsolicited, and full name and address is given, so that any sceptical person may make fullest enquiries. All birds are sent safely and warmly packed with food and water, entirely at my risk, on full week's trial, either on receipt of cash, or CAGE BIRDS deposit system, and cash refunded in full if birds fail to prove entirely satisfactory. So confident am I that these Leipzig Rollers are absolutely best strain on the market that I cordially invite any person to have one on week's trial, and one from elsewhere at any higher price, test them side by side, and unless mine is far better at less money return it, and I will refund everypenny of their money. I claim to be largest Roller retailer in United Kingdom, and it is the sheer merit of these birds that has gained for me this enormous trade.

W. GORE, DIRECT IMPORTER,
131, GOOCH STREET, BIRMINGHAM.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can he obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London.

NOTICE. NOTICE. NOTICE.

E. Power has just received the following:—1,000 pairs of Cutthroats, Combassous, Cordon Bleus, Waxbills (Red and Orange Cheek), Grey and Green Singing Finches, Ribbon Finches, Bishops, Silverbills, Bronzewings, etc, etc., all arriving in the pink of condition. Price all at 2/- pair, or 9/- dozen, mixed. Also just received the first special consignment of No. 1 Bohemian Rollers, specially imported from Boheme, Austria-Hungary. I defy any class of Canary to equal it in its mellow singing; each bird been trained by the flagolet and organ, with most melodious tones, and have 20 distinct changes of song. People that are fond of a good musical box, have their chance now to purchase a real Schoolmaster for rearing their young birds. Special cold room kept for these songsters. Note, these should be heard to be believed; there is no bluff about this. You will oblige by visiting my premises and hear them yourselves before purchasing elsewhere. Price, 12/6 each. German tame Bullfinches (Pipers), pipes most magnificent tunes; price, 10/- each, a bargain. If these birds do not pipe tunes, I will willingly return money. No. 1 Hartz Mountain Rollers, £2 16s. per stick of seven. These are not imitation No. 1's, as other dealers advertise them at less price than they can be imported from Germany. No. 2 Hartz cocks, £2 9s. per stick of seven. No. 3 Hartz cocks, £2 2s. per stick of seven. Genuine Hartz hens, guinea a dozen. 3,000 Canaries in stock; to be seen and heard, and no bluff.

THOMAS, Amblethorn, Near Halifax.**

HUDSON CHAMPION YORKSHIRES.

are what you want if you want to breed your own winners, bred from or related to winners at most of leading shows, Bradford, Windhill, Shipley, Laisterdyke, Palace, etc. I have a few pairs in clears, ticked, marked, colour-fed and natural colour cocks, 8/6, 10/6, 12/6; hens 6/-, 7/-, 8/-; pairs matched to breed winners at 10/6, 12/6, 15/-, £1; cold room bred and kept ready for breeding. I have received scores of testimonials for this strain, three days' approval. I desire no man's money who does not get satisfaction; stamp reply.—Hudson, Confectioner, Thackley, Bradford.

YORKSHIRES

All in Breeding Condition.

If you want Yorkshires of the correct type, length, position and quality of feather, give me a trial and I guarantee to please you. Read these testimonials:—From 4, Bosvigo Road, Truro, Cornwall, March 22nd, 1908.—Yorkshire Cock arrived in grand condition and sung at once, as soon as I put it into a cage. I am highly pleased with it.—W. H. Broome to J. Taylor. Another from Hale View, Lloyd St., Altrincham, March 21st, 1908.—Received the three Yorkshires a few days ago and I am more than satisfied with them; all who have seen them are surprised at the quality and type for such low prices. More orders will follow soon.—W. Trevor to J. Taylor. Another from George St., Cellardyke, Anstruther, Scotland, March 21st, 1908.—Yellow Yorkshire Cock arrived quite safe and I am highly satisfied with him.—Jas. Scott to J. Taylor. Over 200 high-class Yorkshires in stock yet and all

guaranteed untried. Orders sent off same day as received, carefully packed in neat travelling cages, with sufficient food and nourishment for the journey. Safe delivery guaranteed any distance, and all on seven days' approval at my risk. Champion Yellow Yorkshire Cocks at 7/-, 8/6, 10/6, 12/6, 15/- 20/- each; Buff Cocks, 6/6, 7/6, 8/6, 10/6, 12/6 each. All on Full Song and seven inches long. Clears, Ticked, Variegated, Cinnamon Marked and Clear Pink Eyed. Champion accurately matched pairs for breeding at 10/6, 12/6, 15/-, 17/6, 20/-, 25/- a pair. All guaranteed unrelated, and ready to nest at once. Extra good Yellow Hens at 4/6, 6/-, 7/-, 8/6, 10/6, 12/6 each. Buff Hens at 4/-, 5/-, 6/-, 7/-, 8/6, 10/6 each. Inspection invited at any time. Illustrated price list post free. Travelling Cages 3d. extra. Terms: Seven days' approval at my risk. Only address—

J. TAYLOR,

9, NORTHDALE ROAD,
FRIZINGHALL, BRADFORD.

Shaw, 97, Essex rd., Islington, London, N. Five doors from Cross-st. All cars stop at Cross-st.

THE NOTED PARAGON YORKSHIRES.

Having won the much-coveted £21 Yorkshire Challenge Cup, 1908, for the fourth time, is ample proof that the "Paragon Strain" is what the name implies, viz., the best of its kind the world can produce. I am the only exhibitor that ever won this valuable trophy outright, namely in 1903-4-5. I did not compete the two following years to allow others to come to the front. In 1906 I secured the Cinnamon-marked Trophy, and in 1907 I won the "Amalgamated Yorkshires," 25 guinea Challenge Trophy. In two successive years at the Crystal Palace my birds were awarded 13 firsts, and other prizes, including about 20 cups, medals, and specials, such a record has never been equalled by any other firm or fancier of the present day. The above are incontrovertible facts, and are not wild, exaggerated statements of advertising bluff and bounce to catch the inexperienced fancier. My birds come to the front year by year with the same regularity as one day follows another, thus proving beyond question that pedigree breeding is the royal road to success, as blood is bound to tell. I have bred and sold more noted winners during my career than any other firm. One client alone who had all his birds from me, won in his first season 63 specials and prizes. Further comment would be superfluous. I have for disposal some of the best that money can buy for length, style, position, and quality they cannot be excelled. Cocks, hens, or matched pairs to breed the best, prices reasonable; three days' approval; stamped address for particulars.
W. H. SHACKLETON,
South Bank House, WIBSEY, BRADFORD.

If you require birds of the correct type, upstanding, lengthy, tight feathered Yorkshires, allow me to send you Birds Carriage Paid on 7 days approval. I have a large stock of High-Class Birds at reasonable prices.

My stock of Canaries do not require any idle bounce to sell them they are the finest stock of pure bred Yorkshires it is possible to see, all bred from and related to winners, over 1,500 birds to select from. Inspection Invited. If you cannot call to see them send your order by post it shall receive every attention and you have all Birds on approval.
Yorkshire Cocks 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, each; Yorkshire Hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, each; Yorkshire Songsters 7/6, 8/6, 10/6 each. Properly matched breeding pairs 8/6, 10/6, 12/6, 15/-, 20/-. Special Bargains in Show Specimens and Pairs to Breed sure winners at 25/-, 30/-, 35/-, 40/- pair, including winners.

If anyone can give you satisfaction it is Miss Storey who has many thousands of unsolicited testimonials open for your inspection; read one or two of the many received last week.

32, Etruscan Street, Etruria. March 14, 1908.—Received birds quite safe, in splendid condition. I am highly pleased with them; you don't see many Yorkshires like these. Thanking you for the straightforward way you have dealt with me.—G. Kaine to Miss Storey.

Underwood, Notts. March 13, 1908.—I received bird alright, and I am sure you will have more orders from here. My friends are so satisfied, like myself, are highly pleased. I have seen a good many but not one to equal what you sent. I am writing Editors to tell them how highly satisfied I am.—A. Taylor to Miss Storey.

19, Vine Road, Sheffield. March 14, 1908.—Received birds all right, and I am more than pleased with them. I thank you very much for treating me so well.—T. Lister to Miss Storey.

Gas Works, Frodsham. March 14, 1908.—Received birds in good health, and am highly satisfied with them. Many thanks for your kindness.—F. Parlin to Miss Storey.

West Gate, Tickhill. March 13, 1908.—Received birds all right, and am very pleased with them; my friend is also highly satisfied with those you sent him. In fact, they all are grand birds, especially at the price.—F. Glasby to Miss Storey.

P.S.—**I am sure to give you the same satisfaction if entrusted with your orders.**

Neat Travelling Cages 3d. each extra. **All Canaries carriage paid to your door** on 7 days' approval at my risk. New Illustrated Price List of Birds, Cages, etc. 1d stamp for postage. Illustrated Price List of Birds, post free.

The following are merely a few examples out of hundreds received during the past week.

How you can supply such for the money, etc.

Peddeston Ctg., by Cromarty. March 16, 1908.—Received bird alright and in the pink of health and condition. How you can supply birds like what you sent me at the money is more than I know. Should I require any more birds I will send to you and recommend you to my friends. — Jno. Robertson to W. Rudd.

First-class value.

2, Burleigh Street, South Shields. March 18, 1908. — Received birds this morning in splendid condition, and real pictures, and first-class value. Thanks for such prompt dispatch.—F. Ferguson to W. Rudd.

Success it thoroughly deserves.

Cowdenheath, Fifeshire. March 21, 1908. — Received the breeding cage, and I must say that I am well pleased with it. I could not have got one as good here for the money I pay you for it. Trusting that your business will always meet with the success it thoroughly deserves.—T. D. Ryles to W. Rudd.

Best I have ever had.

The Square, Crewkerne. March 20, 1908.—I am glad to say that the bird you sent me is the best I have ever had. I am sending you another order, as I am sure I cannot get better value for money elsewhere.—R. Bendells to W. Rudd.

"Wanted to buy it."

591, Liverpool Street, Platt Bridge, near Wigan. March 17, 1908.—I am pleased to tell you that I received bird safely, for which I thank you very much. I have shown it to a friend to-day, and he says it is a splendid bird, and wanted to buy it from me—but I refused.—W. Mason to W. Rudd.

As one out of a hundred, etc.

10, Dens Brae, Dundee. March 19, 1908.—I now take the pleasure of letting you know I received the Roller hen all safe in the best of health, also the Roller cock I had last month is a first-class bird and sings from morning till night. I may say when I was removing it was singing in the street, and a man (a stranger to me) offered me £1 for it, but I would not part with it. He is a marvel. When I want more birds, or know of anyone that wants a good bird, I will recommend you to them as one out of a hundred that gives satisfaction.—Jno. Hogg to W. Rudd.

Another that does not know, etc.

4th Middlesex Regt., Bhurtpore, Tidworth. March 16, 1908.—Received birds quite safe. I don't know how you can sell such birds for the money.—Bandsman W. Straine to W. Rudd.

Kind and prompt attention.

70, Alexander Street, Kirkcaldy. March 16, 1908.—Bird arrived quite safe, and I am highly satisfied with it. Many thanks for kind and prompt attention.—C. Hamilton to W. Rudd.

Trade terms on application

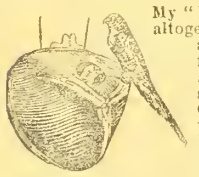
PEARSON, Wholesale Cokernut Merchant,
GREENWICH MARKET.

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.



My "Improved secure" husks are altogether different to any others advertised. Not one year, but for 16 years they have been acknowledged unequalled for successfully rearing Budgerigars Competition and comparsion always increases their popularity. Principa Zoos and parks in the Kingdom use them. CAGE BIRDS says they are "far superior to the old husks." Feathered World says "undoubtedly the new husks are far superior to the old." Exchange and Mart says "they are very superior to the old style which often fall to pieces.' They have distinct advantages, and are absolutely unbreakable. Price **4/6** dozen. Smaller quantities **5d.** each. Instructive pamphlet, entitled "Budgerigar Breeding," free on application. Superior Cockatiel box nests, **1 6** each. **HARPER, Adelaide Villa, Dudley Road, WOLVERHAMPTON.**

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimouials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

Advertisements continued on page 336.

SINGING CONTESTS.

BLACKBURN.

The Blackburn Linnet S.A. held week-end contest March 21, at Old Red Lion, Snig Brook, Blackburn. Winners: 1, W. H. Topping; 2, G. Rostron; 3, R. Topping. Judged by Mr. J. Dobson.—RD. HAYHURST,

DURHAM.

A Linnet sing took place at the house of Mr. J. Grey, when a very large company attended. The judge gave every satisfaction, and some grand singing took place. A silver cup and two splendid pipes were offered as prizes. Winner, Machin; 2, Minns; 3, Blenkison.—D. HANN.

LEEDS.

Usual contest held at King's Head, Shannon-street, on March 21st, when 14 birds sang. 1st and 2nd prizes shared by C. Biss and S. Hardcastle; 3rd prize, C. Biss. Judges, Messrs. Crane and Fisher. Also March 22nd, when 24 birds sang. 1st prize, C. Biss; 2nd, T. Summers; 3rd, T. Johnson. Judges, Messrs. Cooper and Crane.—T. SUMMERS, Hon. Sec.

ELSECAR.

The Elsecar L.S.S. held usual week-end contest on March 14th at the Crown Inn, Elsecar, when 16 birds sang, a novice member getting first prize:—1st, G. Newton, 3 min. 57 sec.; 2nd, T. White, 3 min. 30 sec.; 3rd, S. Vaines, 3 min. 29 sec. Timekeeper, Mr. A. Watkin; marker, Mr. J. Denton. Another contest March 21st, at Barley Corn Inn, when 17 birds entered:—1st, S. Vaines, 4 min. 5 sec.; 2nd, T. White, 3 min. 57 sec.; 3rd, A. Marples, 3 min. 49 sec. Timekeeper, Mr. E. Charles; marker, Mr. J. Denton.—E. CHARLES, Sec.

SHEFFIELD.

Linnet singing contest held at Don Inn, there being a large attendance and 24 competitors. First winner, Coleman, 55; second, Watson, 54; tie for third place, Booker and Knight being 52 each. Judges, Blackhadder and Roberts.—H. TIMMS, Secretary.

YORK.

Usual Linnet contest held at Crown Inn, North Street, March 21, when 30 birds sang. 1, Firth; 2, Buckle; 3, 6, Stothard; 4, Lambert; 5, Bean; 7, Horwell. Judge, Mr. Perry; timekeeper, J. Mason.

Usual Linnet contest held at Bricklayers' Arms, Palmer Lane, Hungate, on March 21, when 28 birds faced the judge, whose awards gave entire satisfaction. Result:—1, Chaplin; 2, Massheder; 3, Moley Warp; 4, Sykes; 5, J. Limbert, jun.; 6, Laverick. Judge, Mr. Jno. Paver; timekeeper, Mr. J. Limbert, senr.—WM. EMPSON.

SKININGROVE.

Skiningrove Linnet S.S. contest was held on March 7, when 15 birds faced the judge. The champion singing of the season was heard, birds singing their full five minutes. 1, Leng; 2, Hodge; 3, Fox. March 14, 12 birds put in window. Winners: 1, Jackson; 2, Dobson; 3, Fox. March 21, cup contest; time singing, best bird in five minutes: 1, Jackson; 2, Whelford; 3, Fox; 4, Leng; 5, Dobson; 6, Womack. Timekeepers, Havelock and Jackson; judge, F. Deadon.—M. DOBSON, Secretary.

HULL.

The Hull L.F.A. held a dominoe match at the North Bridge Hotel on March 18, the proprietor, Mr. Sam Saul, being known as a real lover of the quality singing Linnet. The first prize, a beautiful Roller Canary, was presented by another real lover of the Linnet, Mr. R. Dearlove. The room was literally packed. The Linnet King, Mr. Harry Allen (Leeds) was especially invited. The first prize was won by a gentleman representing Oxo; second prize, J. Scarfe, who caused great amusement in the match; third prize, the Linnet King; 4, R. Dearlove; 5, Mr. Saul; 6, F. Brackley; 7, R. Mawer. After the match Mr. H. Allen sang some of his songs, his rendering of "Coming in and Going out" causing roars of laughter. Everyone present, including 40 members, spent a very pleasant and delightful evening.—R. DEARLOVE.

THE SHOWS.

CHELTENHAM C.B.S.

A very successful table show was held at the end of the last meeting. Over 30 birds faced the judges, and a very instructive discussion took place afterwards. Mr. Grant judged Crests, and Mr. Hiles the other varieties.

CRESTS: 1, 2, Hands; 3, Hayling. NOR.: 1, 3, Harvey; 2, Child. BORDERS: 1, 2, 3, Lewis. BRIT.: AND MULES: 1, 2, Pounsett; 3, Stevens.

GUISBROUGH PRIORY C.B.S.

A members' pair show was held at monthly meeting, March 14. Mr. G. Jobling judged, and placed the awards as follows:—YORKS: 1, 2, Cook; 3, Hall. NOR.: 1, 2, Atkinson; 3, Jackson. HYBRID: 1, Atkinson; 2, 3, Jackson. BRIT.: 1, Cook. A.O.V.: 1, Chappell. CREST.: 1, 2, Hall; 3, Blackburn.—H. HOOD, Secretary.

BIRKENHEAD C.F.A.

This association held a most successful show of British birds in the Temperance Rooms on March 17th. Mr. J. M. Moss judged. The quality was good throughout, many of the exhibits being noted prize winners. The majority were well shown, and in the pink of condition.

GOLDFINCH: 1, Richardson; 2, Tweedle. LINNET: 1, 3, Richardson; 2, Morton; vhc, hc, Whittington; c, Dyson. GREENFINCH: 1, spl, Richardson; 2, Lloyd; 3, Morton; vhc, Dyson. CHAFFINCH, ETC.: 1, 2, 3, spl, Morton; vhc, Richardson. REDPOLL, ETC.: 1, spl, Morton; 2, Lloyd; 3, Dyson; vhc, Lloyd. LINNET (WILD CAUGHT): 1, Dyson; 2, Richardson; 3, Tweedle.—J. RICHARDSON, Sec.

NEW BILTON AND DIS. F.S.

A members' show was held at the Royal Oak, New Bilton, on March 16, when there were some nice exhibits staged. Mr. E. Tysall secured silver medal for best British bird, with a nice Bullfinch, and Messrs. Farn and Laburham silver medal for best bird in Canary, Mule, and Foreign bird classes, with a nice Bishop Finch. There were many Fanciers and friends present. Mr. T. G. Hough judged, and his awards gave every satisfaction.

CAN. A.V.: 1, Jones; 2, Tysall; 3, Wood. BRIT. (except Greenfinch): 1, spl, Tysall; 2, Farn and Laburham; 3, Tysall; 4, Smith. GREENFINCH: 1, 4, Wood; 2, Harris; 3, Farn and Laburham; vhc, Tysall. MULE OR FOR.: 1, spl, Farn and Laburham; 2, Smith; 3, Jones.—JOHN GREATREX, Sec.

SWINDON AND DISTRICT C.B.A.

Monthly meeting held March 14th in Chorus Room (Mechanics' Institution). Mr. Manley (Horfield, Bristol) was the judge at the matched pairs show. He also read an interesting paper on "The Breeding and Management of Canaries." The birds turned up in goodly numbers, and keen competition occurred in most classes.

CREST OR C.B.: 1, Greenwood and Burson. NOR. P.H.: 1, 2, 3, Bywater; vhc, Pinnell; hc, Smith; c, Dodd. YORKS.: 1, 2, 3, Smith. A.O.V.: 1, Dodd. MULES OR HYB.: 1, Greenwood and Burson; 2, Hopkins and Allsopp; 3, 4, vhc, Fulbrook; hc, Brewer; c, Mackay. GOLDFINCH, ETC.: 1, Fulbrook; 2 Leavers; 3, vhc, hc, c, Hopkins and Allsopp. LINNET, ETC., 1, Fullbrook; 2, Pennell. A.O.S. BRIT.: 1, Fulbrook; 2, Leavers. Mr. Manley's Paper was most interesting, and much discussion took place, Mr. Manley answering all questions satisfactorily.—E. ALLSOPP, Sec.

COVENTRY O.S.

A members' A.V. Canaries Pair Show was held on March 18th. Members judged, and awards were decided by points, every member giving the reasons for his decisions. A pleasant and instructive evening was spent. The following were the awards:—1st, W. Davis; 2nd, G. Turrell; 3rd, J. A. Lucas; reserve, G. Peters; vhc, F. W. Harris; hc, W. J. Rowley; c, J. Hadley.—G. PETERS, Hon. Sec.

NORTH LONDON C.B.A.

Monthly meeting held at headquarters, Public Library, Stoke Newington, on March 18; also a table show for Britishers. Unfortunately, entries were short, owing to the misinterpretation of a new rule regarding entry fees, many of those present having misread same. This was all the more regrettable owing to the fact that all points gained at these shows were counted in conjunction with young stock and annual shows for point specials, which this Association offer for each section. Great interest is taken in these shows, and it was very gratifying to see such a splendid muster of members present. Mr. G. Mortlock judged, and his awards appeared to give every satisfaction, although in the Goldfinch class it was a difficult task to separate the winners, several noted winners being shown in this class. The same remarks are applicable to the Linnet class, where Mr. Pike's bird secured first, being the sixth occasion of receiving that award under some of our best judges. After judging, Mr. Mortlock gave his reasons for placing the awards, to the general satisfaction of all present, it being well-known that he is a past-master in this branch of the Fancy. Special for best bird in show was secured by Mr. S. Williams with a grand Chaffinch, and steady as a rock. GOLDFINCH: 1, Williams; 2, 3, Pike; res, vhc, Hale; vhc, Marley. GREENFINCH: 1, 2, Marley; 3, Pike; res, vhc, Williams. LINNET: 1, res, Pike; 2, 3, Marley; vhc, Hale. A.O.V.: 1, Williams; 2, Marley; 3, Neal; res, Williams.—R. P. HARPER, Hon. Sec.

YORKSHIRE CANARIES.

HOW TO BREED, MANAGE AND EXHIBIT.

By H. W. BATTYE (President of the Yorkshire Union) Illustrated by Messrs. H. Norman and A. J. Simpson.

Price 1/- nett. Post Free 1/1½.

This book is absolutely the very best that has been put on the market. It deals fully with the Yorkshire and its sub-varieties, and should, without doubt be in the hands of every breeder of the bird of Grace and Beauty. It contains instruction upon Pairing, Breeding, Moulting, Exhibiting and how to treat this popular variety in both health and disease.

Popular Book. Popular Price. 1/- nett, by post 1/1½.

"CAGE BIRDS," 154, FLEET ST., LONDON.

CLUB REPORTS.

STRATFORD & EAST LONDON F.S.

A committee meeting was held on March 12th at headquarters, Workmen's Hall, with Mr Smith in the chair. The election of officers resulted as follows:—Chairman, Mr. Smith; vice-chairman, Mr. Croxon; treasurer, Mr. Reeves; and Mr. Marshall on committee in place of Mr. Reeves. Will members who have removed since last year's book was issued, notify the secretary, Mr. S. L. Sheldrick, 86, Grove-road, Bow, E. Next meeting, March 26th.—G. MAY, assist.-secretary.

RUTHERGLEN AND DISTRICT O.A.

Monthly meeting took place on March 16th, Mr. Manson, vice-president, in the chair. A very interesting conversation took place, mostly regarding pairing matters and prospects for the coming season. The secretary reminded the members that at next meeting the preliminary arrangements in connection with the first feather show would require to be made, so as to have everything in order in good time. As the date of next meeting falls on the spring holiday, it will be postponed till Monday, 27th April.

SCOTTISH METROPOLITAN OPEN DERBY O.A.

This Association is now in full working order, and since the 17th inst. there has been sent out per post a very large number of our membership cards, giving full explanation of rules, etc., to Scotch Fancy and Belgian breeders. We anticipate that the outcome of perusal will be that many will decide to become members. Already we have a good number, which is always being added to, and should we continue to progress as we are doing the success of our Association will be assured. If any Fanciers have been omitted, will they kindly forward name and address for copy of rules per return?—J. R. MEIKLE, Secretary, 51, Lothian Road, Edinburgh.

LONG EATON AND DISTRICT C.B.S.

General monthly meeting was held on March 14th, in the Co-operative class-room, Station-street, when Mr. O. Clark, chairman, presided over a good attendance. It was proposed and seconded that Messrs. S. R. Turner and J. B. C. A. Caunt be on the committee. Mr. H. Schofield was elected treasurer for the forthcoming season. It was then decided to hold the members' show on December 26th. The society has gone well ahead, and great credit is due to the past committee for getting the society into such a good, sound condition. Several of the members offered to give lectures; we hope the younger fanciers will gain much interest from them. A hearty vote of thanks was accorded the chairman, and this brought a very pleasant evening to a close.—E. BARKER, Joint Sec.

YORKSHIRE C.C. OF SCOTLAND.

First committee meeting was held on March 20 at 65, West Regent Street, Glasgow, the President, Mr. R. Eastman, in the chair. It was decided to have four classes at first feather show, viz.:—Clear or ticked Yellow; clear or ticked Buff; var. or Cinn. marked Yellow; var. or Cinn. marked Buff. It was also decided to grant patronage to the following open shows, provided they give Yorkshire classes, open to Scotland only:—Glasgow and West of Scotland, Perth, Bathgate, Aberdeen, Ayr, and Paisley. The meeting approved of a proposal to open a subscription list to provide a cup for annual competition, to be held by the member gaining most points at shows under club patronage, the club to present the winner with a gold medal. Four new members were elected, these being Messrs. J. Smith (Partick), A. Hendry (Garnethill), T. Mackie (Hill of Beith, Fife), and A. Jardine (Kirkcudbright). —F. BOWMAN, Secretary.

ROCHDALE O.C.

A large number of members attended to hear a lecture on the "Pairing and Breeding of Lancashires, Lizards, and Yorkshires." After the reading, questions came on, and the following are some of them:—Lancashires: Would you advise double Buff coppying, and what benefit do we get by doing so? Is there any advantage in pairing Buff Coppy cock and Buff Plainhead hen? Is it advisable to pair two Plainheads? What benefit should we get by pairing two Yellows together? Is the Lancashire a good feeder? Lizards: What should we get by pairing two Silvers together? Would you advise putting two Golds together? Which do we get the best spanglings from—Golds or Silvers? Are dark-bodied birds the best to breed with? Would you pair two Clears, or pair Clear and Broken? How old should the young be before you start colour-feeding? Which colour-feed do you consider best? And then someone asked which came first—Canary or the egg? This question was not answered. These lectures are becoming so popular that we decided to have another on March 25, at 7.30, on "Pairing and Breeding of Norwich Plainhead; also Mule Breeding."—J. BUTTERWORTH, Secretary.

YORK C.B.S.

At the usual monthly meeting, held on March 9, the Chairman (Mr. T. Wright) gave a paper on how he fed and reared his Norwich Plainheads. There were a large number present. The lecturer said: First, I must mention my cages. I am in favour of double breeders. My own are 34in. long, 17in. high, and 11in. wide. This makes a nice double breeder. I like placing the cock in one end and the hen in the other for a week or two, as I think by this means they get used to each other, and you prevent a lot of unnecessary fighting. As soon as I see them feeding each other through the wires I then draw the slides. The nest pan is best fixed between the perches. If put here the old birds have a much better chance to feed all round the nest. I always take away the eggs as laid, and replace them on the evening of the day when the third egg is laid. Just before sitting the hen, I give the nest a good dusting with insect powder, and feed the birds on Canary seed only up to the evening of the thirteenth day. Then I give the yolk of an egg mixed with three Osborne biscuits for the first three days. I then put in the whole egg and five Osborne biscuits, and feed at this strength right up to the time of taking away the young, which I usually do when they are about 28 days old. I place them at one end of the cage, and the cock will finish them off, while the hen is busy with her second round. Along with egg food I give German Summer Rape and hemp seed. For greenfood, personally, I like chickweed, and give a little two or three times a day. One thing you have to be particular about, and that is, leave no stale food about, and also see that everything is kept scrupulously clean. Follow this very simple method, and new beginners will not go very far astray. Questions from the novice and amateur came thick and fast, which shows how keen they are to learn all they can from a man of wide experience. Mr. T. Wright answered all the questions to the satisfaction of all, and a hearty vote of thanks closed the first lecture of the year, everybody having spent a most enjoyable evening.—A. WAND, Hon. Sec.

CROOK ORIGINAL C.B.S.

At a meeting held recently, Messrs. T. Hill (Thornaby) and T. Wallace (Durham) were elected to judge the first feather and young stock show on July 25. A vote of sympathy for the widow and family of the late Jno. Trevor, recently killed in the pit, and who was a member of the Society, was unanimously passed.—A. BOWES, Secretary.

BATH AND DIS. F.A.

A general meeting was held at the Foresters' Hall, Bath Street, Bath, Mr. Tom Stone presiding over a good number of members. After a long discussion, it was unanimously decided to extend the radius for membership from five miles to fifteen miles. This will tend to increase the number of members, and also to make the competition keener at the two half-yearly members' shows. This radius will include Bristol and suburbs, thus bringing the Bath F.A. in line with the Bristol F.A. in regard to membership. It was also decided to hold a smoking concert on the next meeting night.—HY. TURTLE, Hon. Sec.

WELSH C.B.C.

The Club will hold their annual meeting early in April; date and place will appear in these columns later. If any member has a proposition to bring forward, will he send it on at once, to be placed upon the agenda? Otherwise it cannot be dealt with (as per rules). Two silver medals will be given for best washed birds, one open to champions, the other to those who have not won more than three first prizes in open competition; competitors to find their own birds. Cups and medals and the balance-sheet will be presented. The annual subscription is now due; kindly forward same as early as possible. Fanciers wishing to join can do so by sending 2s. 6d. at once. They will be eligible to compete in washing competition.—D. H. TEDSTONE, Hon. Sec.

CITY AND SUBURBAN A.C.B.

Mr. Norris's lecture upon the "Roller Canary" drew a large gathering on March 23, at headquarters. Mr. R. J. Watts (Watford) was nominated for membership. The notice of motion standing in the name of Mr. A. C. Burn, viz., that the case of the rejection of Mr. Pile for membership be referred back to the Council for reconsideration, was unanimously carried. In consequence of the growing nature of the ordinary business it was decided that the same terminate at 9.30 p.m. on the occasion of a lecture taking place. The payment of prize-money and presentation of special prizes won at the recent British and Foreign Bird show took place, and a pleasing feature was the return of 11s. 6d. by several generous winners, and a donation of 3s. by Mr. F. Wyse towards the heavy expenses. The chairman presented to Mr. J. Pooley a lovely oil painting of a Crest, given by Mr. A. J. Marley for the best pair at the recent pair show.—V. WYNN, Hon. Sec.

NORTHERN B.B.M. AND F.B.C.

The annual meeting was held on March 21, a good gathering of members being present. Balance-sheet for 1907 was read and adopted; it showed a nice little balance on the right side. The Club has also £3 7s. 6d in hand towards Cup Fund. It is intended to raise three cups, one for each section, to be competed for this 1908 season. Also we shall give three medals to each show where patronage is given. The President (Mr. J. W. Taylor) kindly offered to make up the deficiency in Cup Fund, should there be any. The following officers were elected:—President, Mr. J. W. Taylor (Newcastle); vice-presidents, Messrs. J. T. Porteous (Hexham), Wm. Nicholson (Stockton), W. C. Duncan (Coldstream), G. Davidson (Carlisle), Dr. O'Niel (Sunderland), T. Robson (Newcastle); chairman, Mr. J. Sheppard; vice-chairman, Mr. Wm Curry; committee, Messrs. J. Maddison, A. Story, W. McKenzie, Wm. Curry, G. Taylor, J. Irving, Bailey, and Lockyer; treasurer, Mr. J. Bertram; auditors, Mr. Taylor and Mr. Curry. It was decided to hold another table show at our next meeting, April 15, having three classes, Soft Bills, A.O.V., Goldfinch, Bullfinch, Chaffinch or Bramblefinch, and A.O.V. Hard Bill, field-moulted. Entrance, 6d. per cage. There was also an alteration in Rule 13, re partnership, where father and son living together and having one stock of birds, only paid one subscription. Medals were presented to successful members present. The meeting terminated with a vote of thanks to chairman, treasurer, and secretary for their services during the past season.—J. R. STACK, Hon. Sec.

SOUTHERN NORWICH PLAINHEAD CLUB.

A committee meeting was held on March 16th, Mr. Crisp in the chair. Eight new members were elected. Specials for 1908 and 1909:—Champion section: £10 10s. silver challenge cup, to be won three times, not necessarily in succession; £3 3s. trophy, to be won outright, for most points in the season (no member to win this trophy more than once; members that have won this trophy before 1908 and 1909 abide by Rule 5, 1907, but all members that have won, or will win, the £3 3s. trophy must compete for £10 10s. silver cup and £1 1s. trophy afterwards in each season until challenge cup is won three times); £1 1s. for second most points, to be won outright in the season; 15s., 10s., 5s. trophies for 3rd, 4th, 5th most points in the season. Points that count for silver challenge cup will count for £3 3s. trophy. Novice Section: Teapot value £1 1s. for most points at each show, providing there are not less than four club members exhibiting, no member to win more than once in a season; 2s. 6d. for 4th prize winner at each show; 2s. 6d. for vhc winner at each show; Mr. Ramsden's specials—handsome teapot, value £1 1s., for most points during season for birds moulted on R.P. Pepper; miniature goblet for second most points; Mr. F. S. Matthes' special for novices winning most points during the season; £1 1s. cup, electro on nickel silver (conditions as to counting points will be up to novice entering champion section as per C.B. Union definition). Patronage to be given at six open champion shows and six open novice shows during the season. Cages are to be 12 inches long, 11½ inches high, 4½ inches wide, perches of club pattern, samples supplied by secretary at cost price, which must not be tipped or marked, drinkers painted black, usual size. Canary seed only to be used in the bottom of show cages. Mr. Newley has been appointed cage-maker to the club. All contest arrangements will be issued in Press, and money prizes will be allotted by the N.P. Club and ourselves. Members who have not paid their subscriptions will not be entitled to partake of any of the benefits of these specials as per rule book. A vote of thanks to chairman and Mr. Pretty concluded the business. Any Norwich fancier wishing to join the society kindly send on name to the secretary before May.—F. S. MATTHES, Hon. Treas. and Sec.

USE OUR PICTURE POSTCARDS

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges Terms for insertion on application.

W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate

J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.

W. P. BARNES, 12, Launder Terrace, Grantham. Judge of Canarics and Cage Birds. Norwich, Crests, Cinnamons, Lizards, Speciality. Life practical experience.

GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. 30 years experience. Terms moderate.

J. BERTIE, The Cottage, Steedman Avenue, Mapperley, Nottingham. Judge of Canaries and Cage Birds; all classes; 30 years' practical experience.

W. G. BULL, 8, Victoria Road, Redfield, Bristol. Judge of Canaries and Cage Birds. Life experience. Terms moderate.

W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over 25 years' practical experience. Terms moderate.

A. G. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.

J. DIXON, 58, King Street, Wigton, Cumberland. Judge of all varieties of Cage Birds. Specialist in Mules and Hybrids.

J. DOBSON, 14, East Road, London, N. Judge of Canaries and all kinds of Cage Birds.

J. W. DRIVER, (Adnitt & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.

JOHN FROSTICK, Endlesham Road, Balham, S.W. Expert and Specialist Judge of British, Hybrids and Foreign Birds. 30, years' practical experience.

GEO. GARDNER, 11, Haverstock Road London, N W Judge of all kinds of Cage Birds.

C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow Judge of Canaries, Mules, British and Foreign Birds.

F. MARWOOD, 1, Barnard Street, Thornaby-on-Tees Mules, British and Foreign; British a speciality. 18 years exhibitor. Terms moderate.

W. R. MILES, The Aviaries, Chichester. Judge of Canaries and Cage Birds. Life experience.

W. MUNDELL, 6, Carlisle Place, Manningham, Bradford. Judge of Canaries and Cage Birds.

H. NORMAN, The Eyrie, Salisbury Road, Carshalton, Surrey. Hybrids and British Birds.

J. NORTH, 435, Oxford Road, Reading. Canaries, British and Foreign Birds.

J. PATTERSON, Chirnside. Judge of Cage Birds All varieties. Wide practical experience. Specialist Border Fancy Judge.

J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.

The Nightingale in March (?)

A well-known farmer of the Burgess Hill district, whose knowledge of country life, says the "Sussex Daily News," cannot be disputed, writes on March 18th that the Nightingale there has been in song for the past week or two, and goes on to state that every year in his district "they have the Nightingale several weeks before the recognised time for those feathered songsters." This statement is remarkable, as authorities, local and otherwise, cannot be persuaded that the Nightingale is to be heard even in such a sunny district as Burgess Hill before the 10th of April. Had the correspondent been less acquainted with country life it might have been thought the song of some other bird had been mistaken for that of the Nightingale, but the assertion that the early visit of the Nightingale is no novelty to the favoured district of Burgess Hill makes the communication extremely interesting, and raises the question: Do Nightingales, under exceptional circumstances, open song in Sussex in March?

TWITTERINGS.

Kindly note my change of address from 29 to 47, Toxteth Street, Liverpool, writes Mr. T. Ryno.

The annual show of the Leith O.S. has been fixed for 31st October, writes Mr. George Brown (secretary).

We hear that it is the intention of the Kendal and District Society to hold a show before the year is out.

I have removed to 11, Albert Square, Clarence Street, Old Trafford, writes Mr. W. Jackson, hon. secretary of the Pendleton and Salford O.S. Will fanciers please note.

Kindly notify that I have removed to 54, Welbeck Terrace, Dunstan's Road, E. Dulwich, writes Mr. G. F. Woolhouse, where I have increased facilities for my hobby.

Mr. J. W. Jones is the secretary of the Carnarvon show, writes Mr. David Roberts. The next meeting of the committee is on March 30th, at the usual place.

The attention of members of the London and Counties A.C.B. is directed to the Extraordinary General Meeting called for Monday next, March 30th.

We note that at the next meeting of the Yorkshire Union Council, the question of a working arrangement with the Cage Bird Union is down for consideration.

The judges for our annual show, writes Mr. W. Quantrell (secretary, Watford and District C.B.S.), are Messrs. C. A. House for Canaries, etc., and J. Frostick for British.

The next show of the Cockermouth and District F.S. is fixed for Friday and Saturday, December 4th and 5th, under C.B.U. rules, writes Mr. G. Oglethorpe.

We have appointed Messrs. T. Heath and J. H. Payne as judges at our annual show, writes Mr. A. S. Treasure, hon. secretary, Cheltenham C.B.S.

I have been appointed secretary of the Burnley and Dis. C.B.S., and all correspondence must be addressed to me, writes Mr. G. Watson, 6 Kirkgate, Burnley.

The Lowestoft Fanciers' Society has fixed upon November 11th and 12th as the dates of their annual show, we hear, and engaged Mr. J. H. Payne as judge.

We are requested to ask Mr. Stevenson, late of Key Hill, Hockley, Birmingham, to communicate his address to Mr. W. Eyears, 2, Angel Square, Briery Hill, Ebbw Vale.

Mr. J. McGillivray (Boness) writes that Mr. Thomas Scotland has bred a fine young Siskin Mule, which is now on the perch and doing well.

I claimed the first prize Cinnamon Marked Cock at the Palace Show that you gave such a good illustration of in last week's CAGE BIRDS, writes Mr. R. Philpott (Guildford).

Our advertisements in CAGE BIRDS have have always proved satisfactory, writes Mr. W. S. Bennett (Cambridge). Answers to same keep coming in by every post.

Kindly let fanciers know, writes Mr. C. Baker, that after 17 years in Herbert Street, Bedminster, I have changed my address to 8, Clarence Road, Bedminster Bridge, Bristol.

No person who keeps birds should be without CAGE BIRDS each week, writes Mr. S. Hill (Belfast), for it always contains such valuable information.

Messrs. Cowgill and Wellings will judge our open show on December 11th and 12th, writes Mr. W. Jackson, hon. secretary Pendleton and Salford O.S., and Mr. W. A. Bladon our First Feather Show, June 27th.

According to a daily contemporary, a Humming bird's nest containing three dead fledglings was found in a stalk of bananas which formed part of a consignment received at Kettering.

My birds are all sold out for this season, and I thank my many patrons, and wish CAGE BIRDS every success, as it is the best paper going for advertising in.—George Walker (Walker and Stirling, Brechin).

The Accrington and Dis. C.B.S. have engaged Mr. H. W. Battye and Mr. A. G. Davis to officiate as judges at their open show on October 23rd and 24th, writes Mr. J. W. PHILPOTT, secretary.

My address is now 15, High Street, Manchester, writes Mr. S. W. Birchley. I shall be most pleased to do anything in my power to help exhibitors or societies in the county Palatine by way of information, etc.

We have elected as judges for our open show, on November 28th, Mr. W. Vardy (Canarics), and Mr. W. G. Poole (Mules, British and Foreign), writes Mr. W. H. Bray, hon. secretary of the Coventry Godiva C.B.S.

Report of the Lancaster Primrose C.B.S. pair show did not credit me with the honour of winning the Novice Special. I won 2nd and Novice Special in A.O.V. class.—William Walsh (Great Harwood).

Will you kindly convey through your paper, CAGE BIRDS, my thanks to all who wrote me for my birds, as the letters are too numerous to answer, writes Mr. H. Goodland (Bournemouth). I sold all my birds the first week. Letters came from all over the country. This speaks well for CAGE BIRDS.

HEALTH & STRENGTH

Deals with all kinds of Athletics, including **Football, Wrestling, Boxing, Weight-Lifting, Fencing, Running, Ju-Jutsu, Gymnastics** of all kinds, **Swimming, &c., &c.** Gives free advice on all questions of Health, Diet, &c., to all readers.

EVERY THURSDAY, 1d. Sold Everywhere.

Cage Birds Charts:

How to Judge Exhibition Birds.

NO. 2: THE YORKSHIRE CANARY.

[See Full-page Drawing and Explanatory Notes on pages 332 and 333 this week.]

A remarkable outburst of appreciative welcome greeted the chart published with our recent Birthday Number, dealing with the exhibition points and failings of the Goldfinch. In response to this, we have decided to issue a series of such charts, so that

EVERY EXHIBITION BIRD

of note may be dealt with in the same helpful and educative manner. In this issue No. 2 of the series appears. It deals with the Yorkshire Canary, and we venture to think will be even more highly appreciated, if that be possible, than its predecessor. The care and time bestowed upon this drawing by Mr. Norman will be apparent to the most casual eye. To the lover of the Yorkshire Canary, and especially the beginner in its breeding, the value of the chart is inestimable. He has only to keep it in his birdroom to have always before him the ideal to breed to and produce, while the faults to be avoided can never escape his eye.

Breeders of this and other members of the Canary family, and lovers of many other species of exhibition birds will, in due course, find their favourites made the subject of one of CAGE BIRDS CHARTS.

The same great pains will be taken to ensure the completeness of every chart, and its accompanying letterpress, and the deft fingers of our artist will portray the excellencies and deficiencies of the birds with the same precision and clearness. The value of CAGE BIRDS latest feature to the novices and amateurs in our hobby will be obvious to all, and we ask our many kind friends to bring

CAGE BIRDS CHARTS to the notice of everyone interested in Bird-keeping and breeding

Impress upon them that they must on no account miss any one of the series to be issued in the near future, or they will miss a TRULY HELPFUL AND EDUCATIONAL feature never previously put before bird-keepers.

CAGE BIRDS CHARTS may be had beautifully printed on stiff art card, with eyelet holes, for hanging in the bird-room, price 3d. each, post free. The explanatory notes and scales of exhibition points are printed round the margin. No. 1, the Goldfinch, and No. 2, the Yorkshire Canary, will be on sale early next week.

SEND YOUR ORDER AT ONCE.

We have only advertised the "Vin Red Mite Powder" in your columns for a fortnight, but have received orders from all parts of the country, some of them coming from the best-known fanciers of the day.—THE JULIAN POWDER CO. (Northampton).

I have to acknowledge receipt of your handsome framed painting, writes Mr. Wm. B. Cobb (Leeds), which I won for most points in Scotch Fancies at the recent Palace Show. It is a worthy tribute from both donor and artist.

The schedule of the Vale of Conway and Dis. F.A.'s members' show, to be held April 18th next, at Conway (to hand from the secretary, Mr. A. T. Johnson), provides an excellent classification, and there are some very good specials, including cups and medals.

We were very pleased to see the reproduction of our Palace first prize winning Yellow Cinnamon Marked Yorkshire cock in your excellent Spring Number, and I am sure we esteem it a great favour.—T. Ogden (Messrs. Ogden Bros., Bradford).

Please thank all who have answered my advertisement, writes Mr. J. Cue (Pendleton). I am unable to answer all cards and letters. The hen Siskin is sold to a Mule breeder at Higher Crompton, near Manchester.

We are sorry to hear that Mr. A. Lawrie, of Roslin Midlothian, has had the misfortune to lose through fire the whole of his stock of Border Fancy Canaries, together with his outdoor bird-room. The cause of the conflagration was the over-heating of the stove-pipe.

The Wath and District C.B.A. (near Rotherham) have arranged for a lecture by Mr. Wadsworth, on "Canary Breeding," this Saturday, March 28th, at 6.30 p.m., at the Cross Keys Hotel, when they will be pleased to welcome all fanciers and friends who can attend.

Mr. S. Drake (of Halifax) is once again advertising his well known marking rings for Canaries and other birds, and from the samples we have seen we anticipate these thoroughly practical articles will be as popular as ever during the coming season, some special improvements having been made in them.

Owing to an oversight, in the names of winners of silver medals for the Scottish British Bird and Mule Club, writes Mr. A. W. Watson, the secretary, Mr. Barclay should be credited with two, also the Mr. G. Brown mentioned should be G. Thomson, which please correct.

At a general meeting of the Troon and Loans P.P. and C.B.S., held on March 23rd, our show was fixed for 29th August, writes Mr J. Ferguson, secretary. With the number of new members enrolled this year the show promises to be quite as successful as those of the past two years.

A members' show in connection with the Tunbridge Wells and Dis. F.A. will be held on April 1st, in the Camden Hall, Camden Road, writes Mr. H. G. Whibley, hon. sec. The prizes will consist of: First, 40 per cent. of receipts in each class; second, 25 per cent., and 3rd, 10 per cent. Judge for cage birds is Mr. A. Goddard. Entries close March 28th.

A magnificent catalogue of seeds, plants, and appliances reaches us from Messrs. Rogers and Co., the Royal Leamington Seedsmen, Leamington Spa. In it is listed everything the gardener requires, and the prices are extremely moderate indeed, especially so seeing that every article is guaranteed of the highest possible quality. All readers fond of gardening, or who possesses an allotment, should send a postcard for a copy of this excellently got-up booklet which is beautifully illustrated from photographs. Messrs. Rogers offer a £100 cash prize in connection with their Leamington Giant Onion Seed, in addition to sixty other

I have been a reader of your valuable paper for three years now, and can tell you I look very eagerly for my copy on Friday mornings. I have it to thank for my knowledge of Canaries, as it has been very beneficial to me, I can assure you. I have had two advertisements in CAGE BIRDS recently and had very good results.—J. Thorpe (Sheffield).

The following gentlemen have been appointed to judge Kirkcaldy C.B.S. show on November 14th, writes Mr. J. Wilson (secretary): Scotch Fancy section, Mr. D. Brown (Edinburgh); Border Fancy section, Mr. P. McKenzie (Kelso); Norwich section, Mr. A. Chalmers (Kirkintilloch); and British and Foreign sections, Mr. Pettigrew (Glasgow). With these popular judges we hope to have a good entry.

The North London C.B.A., the secretary of which is Mr. R. P. Harper (26, Brighton Road, Stoke Newington, N.), have issued a tasteful manual for 1908, containing an excellent programme of coming events of interest to lovers of the hobby, and this booklet reflects credit on those responsible for its production. The membership roll is a very good one.

It may interest many fanciers in this district, writes Mr. J. Tristem (Bristol), to know that when I was paying a brief visit to Bath I was informed that the Bath Fanciers' Association had decided to extend their radius from five to fifteen miles, which will take in Bristol, Frome, and district, in which there are fanciers of all kinds. I think the Bath fanciers may reasonably be congratulated upon their venture. Although an association heard little of, I was surprised to hear they have a membership of upwards of 100, and as on their cage bird section they have such whole-hearted fanciers as Messrs. Andrews, Biss, Tayler, Folwell, Jones, Russell, and others, I think we may look forward to seeing some of the finest shows of the West being held in the little city known as "Bristol's Sister."

Southern Yorkshire C.C.

I should like to inform members of the S.Y.C.C. that the annual general meeting will be held at the Napier Tavern, High Holborn, W.C., on April 10th, at 8 p.m. sharp. Presentation of prizes and important business, as per agenda.—J. W. RENNIE, hon. sec.

A New Book on British Birds.

There is now due to be issued a most comprehensive and beautifully produced book dealing with the order *Passeres* of the Birds of Great Britain and Ireland. This is an event of considerable interest to our readers, because this sumptuous work not only deals fully with the wild life of the birds concerned, but supplies first-hand, up-to-date information on their keeping in captivity, a plan never before carried out, we believe, in a work of this class. The letterpress is by that well-known ornithologist and bird-keeper, Dr. A. G. Butler, and the book comprises well over 100 full-page, specially-prepared coloured plates of the birds, and 255 coloured figures of eggs, by those noted exponents of the art of bird delineation, Messrs. H. Gronvold and F. W. Frohawk. The beauty of the plates and the scope of the accompanying matter can be judged by readers themselves on filling up the form found in the advertisement of the work appearing on another page (or by sending a postcard, mentioning CAGE BIRDS on it) to the publishers, the Caxton Publishing Co., Clun House, Surrey Street, London, W.C. The two volumes comprising the work can be had for a first payment of 4s., the balance of price by monthly instalments of 5s. The birds dealt with cover practically all species of interest to bird-keepers—Thrushes, Warblers, Finches, Tits, Larks, Pipits, Wagtails, and other familiar birds. Readers should make a point of seeing the prospectus and specimen plates; write for them at once.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

The ANNUAL for this year is grand, and I must say it is the best ever published; very useful to secretaries and everyone in the Fancy. It is simply A1.—J. Smith (Mansfield).

I am very pleased to see the ANNUAL back to its old shape, this being much more convenient. It is brimful of interest and information invaluable alike to the beginner and the old hand in the cage bird Fancy.—E. L. A. CROW (hon. secretary, Lowestoft F.S.).

One of the post-cards comprised in the "Matched Pairs for Breeding" series, given away with last week's Spring Number, soon returned to us embellished with the following neat verse by Miss H. B. Rutt, of Folkestone:

"I do not like you, sir," she said,
And looked the other way;
But when an hour or two had passed
She coyly named the day.

I was greatly surprised, and no less pleased, to see the illustration of my Twite Canary Mule in your issue of March 21st, writes Mr. W. H. Macdougall (Fort William). It is a 1906 bird, hatched in August and bred of a large Buff Yorkshire hen. The father Twite is the oldest bird I have, and a great favourite. After many attempts to get a cross from him I had almost given up hopes, as he was so anxious to know what was inside the eggs, and smashed many before I could get them away. I left him with the hen for the last nest (two eggs), and strange to say he did not touch them. In due time I tested them, and found them fertile. I removed him, with the result, one dead in shell; the other is the bird shown in your valuable paper.

CAGE BIRDS ANNUAL is really invaluable this year, and it teems with information.—E. S. Lugg (Lewisham).

I have received the CAGE BIRDS ANNUAL. It is the best I have ever had, and a grand sixpennyworth for any fancier.—David Roberts (Carnarvon).

A very neat and efficient egg and soft food mincer, very cheap at sixpence, the price asked for it, is being advertised in our columns this week by Messrs. Cox and Son, Guildford Street, Lozells, Birmingham. The specimen mincer sent us well justifies the claim that it is "clean, strong, and simple," and we anticipate it will find a place in a great many bird-rooms.

Kindly thank all who answered my advertisement in your valuable paper CAGE BIRDS, writes Mr. P. Harrower (Alloa). I had letters from all parts of England and Scotland, and I answered all who sent a stamp. The rest being so many, I had not time to answer. All birds I advertised have been sold, and I could have sold three times as many, if I had them. I have been a reader of CAGE BIRDS since the first number, and would not be without it.

Some residents in a house near the top of Washington Street, Bradford, are having some trouble with a pair of Rooks, who have taken posssession of the chimney top on which to build their nest, writes Mr. Samuel Dean (Great Horton). Several ineffectual attempts have been made to smoke them away, but without result. Cayenne smoke made the hen rather dry, but after adjourning for a drink to the spout she returned to her nest apparently none the worse. This warfare is being watched with interest by the birdy men of the district.

How surprised I was on opening my CAGE BIRDS last week, writes Mr. G. Edwards (Leominster), to see my Pied winning Bullfinch so well drawn. I think it a true picture of him, and reflects great credit on the artist. His exhibition at the Palace show was his first attempt out, and I think that at such a show he did well. I hope with care and attention during his next moult we shall hear more about him. He is admired very much by all who have seen him, and think him a most beautiful bird. I may say I am trying him with a Pied Cinnamon hen, and they seem to agree very well and look like settling down to duties, and I trust I may be able to have a little luck with them.

Cage Birds Annual

—For 1908—

The Standard Guide to the Fancy, IS

A MARVELLOUS SIXPENNYWORTH

—absolutely the best ever put before the Fancy.

LETTERS OF APPRECIATION REACH US BY EVERY POST.

A charming new cover, many beautiful illustrations of winning birds printed on art paper, a lovely coloured plate for frontispiece, a complete revision of all the popular features, and the addition of strikingly useful new features, mark this 1908 issue.

The articles, too, have never been excelled, and both Canary, Hybrid, British and Foreign bird keepers have been specially catered for. The needs of the beginner have likewise been given the fullest consideration.

OUR NORWICH PLAINHEAD COMPETITION.

The Result.

In our Crystal Palace Show Number it will be remembered that we published a Puzzle Picture, containing half-a-dozen Norwich Plainhead Canaries, and that among these six birds were hidden certain parts which, if cut out and pasted together, would make one good exhibition specimen. A prize of 10s. 6d. was offered to the reader who could solve this puzzle, and in the event of two or more being correct, the nearest attempt was to take the prize. Another competition in connection with the same picture specified that all the entrance fees of sixpence each sent in by competitors should be given as the prize (less five per cent.) to the winning attempt, conditions the same as above-mentioned.

To our regret, these competitions seem to have met with considerably less favour from readers than the one previously promoted in connection with the Yorkshire Canary; the entrance fee competition, in fact, can only be written down as a complete failure, but 26 entries being received for the same. The competition on the ordinary lines attracted a very large number of competitors, it is true, but the huge entry received for the "Yorkshire competition" was not nearly approached. We are afraid the "puzzle" set was of rather too difficult a nature, and its complications calculated to deter readers from sending in solutions. In this opinion we are borne out by the fact that

NOT ONE SINGLE COMPETITOR IN EITHER COMPETITION SUCCEEDED IN GETTING THE BIRD CUT OUT AND PASTED UP CORRECTLY.

Under these circumstances the task of adjudication became one of exceeding difficulty, and the only way out lay in taking a tracing of our artist Mr. Norman's key picture, and awarding the prizes to the two attempts which came nearest to it.

In competition No. 1 the winner is :—
Mr. H. W. Tomsett,
34, Endwell Road,
Brockley, S.E.
to whom a cheque for 10s. 6d. will be forwarded in due course.

This gentleman was run very closely by Messrs. T. Robson (Newcastle-on-Tyne), and H. G. Brooks (Leamington).

In competition No. 2 the winner is :—
Mr. E. J. Checkland,
4, Buxton Road,
Norwich.
to whom a cheque for 13s. (no deduction being made from the entry fees), will be sent in due course.

Mr. Norman's key to the exhibition specimen was as follows :—Beak from No. 1, head No. 3, chest and one leg No. 2, back and wings No. 4, lower part of tail and one leg No. 5, upper half of tail No. 6.

CLUB NOTICES: continued.

Reading and Dist. C.B.S.—April 1, Palmer Hall, 8. Remarks on the Breeding Season: Introduced by Mr. C. J. Howlett.—G. A. Charles.

Rotherham C.B.S.—Mar. 28, College Inn, 7.45. Special business; election of judges for First Feather and Open Shows.—W. Brotherton.

Reigate F.A.—April 1, Lucas's Tea Rooms, High Street, Reigate, 8. Annual General Meeting, and election of officers, Cage Bird members specially invited. Business important.—A. W. Bacon.

Rochdale O.C.—Mar. 30, Club Room, 8. Committee Meeting.—J. Butterworth.

Rochdale Good Intent C.B.S. — Mar. 28, John Bright's Statue, Town Hall Square, 2. Ramble in Littleboro' district; all fanciers welcome.—S. M. Clayton.

Sheffield and Dist. C.B.S.—April 2, Wentworth Cafe, 8. Night of questions.—Lindsay and Bingham.

Stoke Newington F.A.—Mar. 31, Devonshire Square Church, Stoke Newington Road, N. Lantern lecture, entitled "British Birds and their Nests," by Mr. J. Robsou; fanciers invited; admission free.—G. Dowden.

Stockton-on-Tees and Dist. C.B.S.—April 2, Leeds Hotel, 7. Election of judges for Open Show and Members' Pair Show. Mr. Hill (Thornaby) judge; fanciers and friends invited.—J. W. Lowes.

Torbay O.S. (Paignton).—April 7, Newman's Room, Committee meeting: business includes drawing up of classes for the First Feather Show; samples of Cage Bird Foods; with booklets, will be distributed.—J. N. Jeffery.

West London F.A.—April 2, Bush Hotel, Shepherd's Bush, 8. Mr. J. Rohson will read lecture on Breeding and Exhibiting.—J. Dewhurst.

West Bromwich and Dist. C.B.S.—Mar. 31, Dartmouth Hotel, 8. Fixing date for Annual Show, etc. —T. Duffield.

Wath and Dist. C.B.A. — Mar. 28, Cross Keys Hotel, 6.30. Lecture on Canary Breeding, by Mr. W. Wadsworth (Skelmanthorpe).—H. A. Watson.

Widnes and Dist. O.S.—April 2, Grosvenor Hotel, 7.30. Meeting room and other important business. —S. Andrews.

Wombwell Darfield D.C.B.S.—Mar. 28, Royal Oak Hotel, Church-st., 7. Business important, for the election of committeemen.—J. Hill.

Yorkshire Union of C.B.S. — Mar. 28, Market Tavern, Godwin Street, Bradford, 6.30. Old Council meeting. Working arrangement with the C.B.U., etc.—F. Hammond.

OUR ESSAY COMPETITION RESULT we hope to announce next week.

CLUB NOTICES.

One notice of any forthcoming Society meeting inserted free. It should reach us by Tuesday morning's post. Specially printed Club Notice Postcard may be had free on application to our Manager. Secretaries should always use them.

Accrington and Dist. C.B.S. — April 9, Central Conservative Club. Young Show, and lecture on British Birds, by Mr. D. Bentley (Gt. Harwood). Fanciers cordially invited.—J. W. Philpott.

Ayr and Dist. C.B.C.—April 4, Wallace Tower Hall, 8. Enrolment of country members, etc.—C. C. Irvine.

Blackburn and Dist. C.B.S.—April 2, Meliora Restaurant, 8. Business important; classification.—J. W. Marsden.

Brighouse and Dist. C.B.S.—Mar. 31, Round House Inn, 8.—F. Mitchell.

Belgrave (Leic.) and Dist. F. and F.S.—Mar. 31, New Inn, Loughborough, 8. Table Show of Canaries A.V. (Non-fed). General business.—W. H. Riley.

Broughty Ferry C.B.S.—April 1, Baker's Room, King Street, 8. Staging for Open Shows on October 10.—R. Whitton.

Bingley and Dist. O.S.—Mar. 31, Co-op. Rooms, Chapel Lane, 8. Business important.—A. Livesey.

Battersea Open C.B.A.—April 1, Duchess of Devonshire, 8. Table Show of Finches. J. Dewhurst, judge; all fanciers welcome.—F. Easterling.

Blaydon-on-Tyne and Dist. C.B.S.—April 4, Co-op. Hall, Blaydon, 7.30. General business.—D. A. Ogilvie.

Cambridge C.B.S.—April 1, Forester, Burleigh Street, 8. Smoking Concert.—T. S. Moore.

Crook and Dist. C.B.S.—April 4, Horse Shoe, 7.—W. Rutherford.

Clitheroe and Dist. C.B.S.—April 2, Bennett's Tea Rooms, Moor Lane. Business important.—R. Lambert.

City of Bradford O.S.—Mar. 28, Fying Dutchman Hotel, 8. Mr. C. Whiting will open a debate on the Yorkshire Canary. Fanciers and friends cordially invited.—F. Rhodes.

City of Dundee and Dist. N.M. and B.B.A.—April 1, Doig's Rooms, 8. Nomination of judges for Open Show.—A. Miller

Carlisle and Dist. O.S.—Mar. 31, Viaduct Hotel, 8. Business—Selection of judges and correspondence re next show. Members please attend. — W. H. Wright.

Crook Original C.B. R. and P.S.—April 1, usual place, at 7. Business, First Feather Show, and nomination of judges for Open Show.—A. Bowes.

Dulwich and Peckham C.B.S.—April 2, Montpelier Hotel, Choumert Road, Peckham, 8. Leaves from the Diary of a Well-known Breeder of the Norwich Plainhead. Fanciers and friends welcomed.—W. Hodson.

Darlington C.B.S.—April 1, Half-Moon, 8. Table Show of British Birds, 8 classes. F. Marwood, judge. Go die, Bullie, Greenie, Linnet, Chaff., or Bramble, Siskin, etc., A.O.S. Finch, A.O.V. Cage Bird.—E. Brunskill.

Edinburgh Western.—April 2, Reigo Street Hall, 8. Election of judges, booking of hens, prize cards, and other business.—J. Thomson.

East Bowling and Dist. B.F.A.—Mar. 28, Barley Mow, 7. Lecture, by a friend; fanciers and friends invited.—J. Hudson.

Edinburgh N.C. and M.B.S.—April 2, 142, High Street, 8. Booking of hens, notice of motion that we consider part of the minutes of last general meeting, last meeting for new members.—J. Welsh.

Forfar and Dist. C.B.I.S.—April 4, Airlie Arms Hotel, Kirriemuir, 6. Passing of Rules, dates of members' first feather shows and appointing judges for same. All invited.—W. Grewar.

Greenock, Port-Glasgow and Gourock O.S.—April 1, Victoria Hall, 8. Business important.—W. H. Stodter.

Glossop, Hadfield and Dist.—Mar. 31, Howard Arms, 7. Table Show, pairs matched for breeding. Classes for Canaries, and Mule or Hybrid; also judging competition; the whole open to novice members.—Fred. Greig.

Hetton-le-Hole and Dist. C.B.S.—Mar. 28, Crown Inn," 7. Arrangements for Nest Feather Show, and other important business.—A. J. Notley.

Hamilton (Cadzow Oaks) O.S. — April 4, Royal Hotel, Room 5, 7. Business important. Fanciers invited.—A. Cant.

Hartlepools C.B.S.—April 1, Y.M.C.A. Rooms, 8. Balance sheet and other important business.—E. Woodhead.

Kelty and Blairadam C.B.A.—Mar. 28, Gothenburgh Hotel 7. Handing out of books; also general business.—J. Ford.

Keighley and Dist. C.B.S.—Mar. 31, King's Head Hotel, 7.30. Selection of specials and lecture on Yorkshire Canary, by S. Dean, Esq. (Gt. Horton).—W. Wright.

Llanelly and Dist. C.B.S.—Mar. 28, Bird-in-Hand, 7.30.—J. Simon.

Leicester and Leicestershire Hand-in-Hand C.B.S. —Mar. 31, White Swan Hotel, 8. Smoking Concert; friends cordially invited.—C. Draper.

Longton and Dist. C.B.S.—April 7, 8. Mr. C. Birks' Paper on "The Breeding and Rearing of the Norwich Canary." Judges for the Annual Show to be chosen.—T. J. Siers.

Lancaster and Dist. C.B.S.—April 4, Market Hall Coffee Tavern, 7.30. Business important.—C. J. Cafferty.

Lowestoft and Dist. C.B.S.—Mar. 30, Fox and Hounds. Please note alteration in date. Important business, 8.30.—W. Nichols.

London and Counties A.C.B.—Mar. 30, "The Bay Malton," Great Portland Street, 8.30 p.m. Extraordinary Special General Meeting. To discuss motion moved by Mr. P. Adamthwaite, and alteration of rules, as suggested by the Committee. The attendance of all members is requested. — R. J. Pretty.

Larkhall C.B.C.—April 4, Miners' Hall, 7. Reconsideration of Rules.—G. Kirk.

Loughborough and Dist. C.B.A.—April 1, Cross Keys Hotel. Lecture on "Selecting, Muling and Exhibiting British Seed Eaters." By H. J. Chick (Nottingham), 7. All interested cordially invited.—W. P. Foster.

Northern Yorkshire C.C.—April 1, Lockhart's Cafe, 65, Grainger Street, Newcastle. First Feather Show, specials, classification for patronage; novice classes.—T. C. Crawhall.

Nottingham and Notts. O.S.—April 1, Cobden Hall, Nottingham, 8.30. Election of judges, and other important business. G. E. Wilkinson.

Newcastle-upon-Tyne C.B.S.—April 2, Lockhart's Monument, 7.30. Lecture on Yorkshire Canary, by T. C. Crawhall; intending members and fanciers invited; subscriptions now due. Curry and Hutchinson.

Northern Crest Club.—Mar. 31, Cafe, Fawcett Street, Sunderland, 7.30. Subscriptions due; new members invited.—J. G. Hutchinson.

Queen's Park and Dist. C.B.A.—April 2, Emmanuel Hall, Harrow Road, W., 8. Paper by Mr. F. Easterling: Subject, "Is it Bird Fever?" Visitors cordially invited.—J. C. Birch.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct nome of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper ond enclosed with the query. In no case must the address appeur on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of puper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or uny other matter for publication.*

(5)—*The department to which the queries refer must be stoted in bold letters on the left-hund corner of the query.*

(6)—*If an answer in the some week's issue is desired, queries must be posted to reoch us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of deuth (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence ond an addressed stumped envelope. Queries of un ordinory noture will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, und enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

Queries will be answered under the following conditions:—

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

A Doubtful Question.

New Beginner, Liverpool.—The Canary hatched last May ought certainly to have sung long ago, but perhaps the fact that "it has never heard another bird sing," by which I assume the bird was isolated from others when quite young, may partly account for its silence. Had not you said that it had commenced singing fairly well in the last month I should have doubted its being a cock. Anyway, you would have done better to have kept it unmated until it was stouter in song. From your suggestion that the cock is continually chivvying the hen about I imagine they are progressing all right. By the time you see this they will probably be settled down, and perhaps busily occupied with nesting. As soon as they have gone to nest cut off the egg food and mixed seed, and give a little of the former only twice a week. (2) Certainly the cock will get his full voice without hearing others sing, but he cannot be expected to become a good singer. He may not sing at all when nesting has progressed a little further.

Temperature for Breeding.

"Temperature."—As you are not using any kind of artificial heat, it is more a question of time to mate than temperature that affects you. And now the weather may be reasonably expected to keep up at least a mild temperature indoors you may mate up the birds as soon as they become ready. If you were employing artificial means to maintain a certain heat, then from 55 to 60 degrees would be best for you to aim at, and not lower than this. Your experience of birds improving in condition and throwing off troublesome colds on their removal from a room where the heat was very variable to a cold room where the temperature was unvarying, but low, is quite a usual one. As I am fequently pointing out, a low temperature that is regular is infinitely preferable to a temperature that is always banging up and down between "summer heat" and "freezing point."

Laying Pure White Eggs.

"The Cuckoo."—It is certainly very unusual for a Canary to lay pure white eggs, and more especially so for her first nest of the season. The tint and density of the grey speckling varies a good deal, and usually gets decidedly paler at the end of the breeding season, but pure white is, I imagine, extremely uncommon. The most remarkable clutch I ever had was laid by a yellow Norwich, and h a distinct band of hedge-sparrow blue around the centre of each, the two ends being of the normal colour. Of course, I am assuming that your bird is a Canary. Coming as it did to you there is just the possibility of its being an escaped foreigner of some kind. In any case, it would be interesting to hear the result of these pure white eggs. Glad to hear of your success, and that you attribute so much of it to the guidance of CAGE BIRDS. That is encouraging to us.

Got the Dry Moult.

Adam McBride.—I'm afraid I do not quite know what "dry moult" is. It is, or the term is, new to me. But I do know that your Canary appears to be the victim of mismanagement. The Fancier who advised you to put him in the entry as a means of curing him was probably in a facetious mood, or was "pulling your leg." Try the following treatment for a month. First of all examine the cage for red mite—it is no use looking about the bird for this pest. Keep free from draughts and chills, and comfortably warm, but do not overheat. Give tepid baths every second day if it will bathe. Slightly anoint bare places about the head twice a week with boracic ointment, and keep eage perfectly clean and provided with gritty sand. Feed on Canary seed only as a staple, give a little green food daily, and twice a week give a small piece of bread dipped in milk, squeezed nearly dry, and a few drops of cod liver oil, emulsion for choice, dropped on it. Sprinkle it with maw seed if the bird does not take to it at first. In the water give for the first week as much Epsom salts as will cover a threepenny piece and six drops of lemon juice every second day; for the second week give six drops of aromatic sulphuric acid every second day; third and fourth weeks, give twenty drops of chemical food every second day. Shall be glad to hear result at end of this time.

Mating and Colouration.

No Name.—Your questions are not very clear. You ask what would be the best mates for a "Norwich cock (orange) and two Yorkshire hens," and go on to say you would like to breed a few Hybrids. If you mate Norwich and Yorkshire Canaries together the young will be neither Mules nor Hybrids, but cross-bred Canaries. Hybrids are bred by mating two distinct species, such as a Goldfinch and Bullfinch. You might breed cross-bred songsters by mating the Norwich cock alternately with the two Yorkshire hens. If you wanted mates of their own varieties, then if the Norwich is a clear, mate him with a ticked buff; if he is himself marked put him to a clear buff. You do not even say whether the Yorkshires are yellows or buffs, so I cannot even guess what mates might be suitable. 2. You cannot influence the colour of your Norwich now by colour food. Wait until the moult is about to commence, then begin to give a little tasteless red pepper daily. You will see plenty of advice on the subject in our columns at the proper time.

Egg-Binding Troubles.

J. W. French.—One reason for your birds being so badly troubled with egg-binding is that you paired them up too early. As you do not appear to use any form of heat in your attic bird-room—rooms by the way, which are usually very cold, and subject to great fluctuation of heat at this time of year—you ought not to have mated the birds before the end of this month at the earliest. Another cause is that the birds are not very strong. Any birds that do not yet show signs of mating I would advise you to separate for a fortnight, or until they are ready for mating. Meanwhile, treat as follows: Omit the linseed from your staple diet altogether. Give the cocks a little egg food and a few grains of hemp twice a week and a leaf of dandelion daily. The hens, give a little sponge cake slightly moistened with sherry, and with four or five drops of cod liver oil emulsion well mixed in it twice a week, and also twice a week half a teaspoonful of inga seed per bird, and a spray of watercress daily. In the drinking water give six drops syrup of buckthorn every second day for the first week, at the end of week six drops aromatic sulphuric acid for one day only. During second week give on alternate days: First, twenty drops of chemical food in the water, and next day ten drops of glycerine and ten of whiskey. When the hens begin nesting again give a small pinch of inga every second day until the clutch of eggs is laid.

Got the "Pip."

J. Chamberlaine.—What you call the "pip" is simply the bird's gland for secreting the oil wherewith it dresses its plumage, as Nature intended it should. I do not expect there is anything at all the matter with it. Your feeding is decidedly bad, as you give too much egg food and too much hemp and niger. Put the bird on the treatment advised to "Amateur" in this issue, but give the hen watercress instead of daudelion for green food. In the drinking water give as much Epsom Salts as will cover a sixpence, and a few drops of lemon juice every second day for a week, and the following week give fifteen drops of Chemical Food every second day. Do not interfere with the oil gland at all. To clear out the grey lice, well dust the bird with pyrethrum powder, blowing it well into the feathers; wrap the bird up in a small handkerchief, leaving just the beak and nostrils free, and keep it thus for a few minutes. Afterwards give a bath daily with a few drops of quassia extract in it. Also give the cage a good cleaning, as there may be red mite about as well as lice.

An Egg-Eating Hen.

W. Noon.—When a hen commences this vicious practice, unless she is a valuable specimen and specially useful for breeding, the most satisfactory treatment is to despatch her to that bourn whence no traveller returns. Chloroform is best; more humane. But if you wish to keep her, it is probable you may find some advice on our Novices' page. Give her a couple of mealworms daily while nesting, as these may help to gratify the unnatural craving which causes her to devour the eggs.

Shell-Less Eggs.

A. W.—You mated the birds much too early, and probably before they were ready, which is largely the cause of your ill-luck with the first nests. You did quite right to separate them under the circumstances. Keep them separate for another fortnight, and feed on Canary seed only as a staple, with a half-teaspoonful of rape seed twice a week. In addition to this, give the cock a similar quantity of hemp twice a week, and the hen a small pinch of niger every third day. A small quantity of egg food may be given twice each week, and a spray of watercress daily. Do not give the hen dandelion, as it will only aggravate her trouble. Keep her well supplied with cuttlefish bone, and twice in each week add as much Epsom Salts to her water as will cover a sixpence, and on each of the other days during the fortnight give twenty drops of Chemical Food in the water. After this course of treatment she may breed all right this year, but if she has a similar experience with her next nest do not try her again this season.

Preparing for Mating.

"Amateur."—As you have yet to acquire the most elementary knowledge of Canary breeding, you would do well to invest in a copy of "Canary Breeding for Beginners" (7d.), from this office. Also read up our Novices' page since January. Providing your birds are in good health, all you need do now is to feed on a staple diet of two parts Canary to one part summer rape; give a teaspoonful of egg food twice a week, a pinch of hemp twice a week to the cock, and for the hen give the egg food as above, and a pinch of inga twice a week. Give both birds a leaf of dandelion daily. If you have a two-compartment breeding cage, put one bird in each side, separated by the wire slide, and keep thus until the cock is in good song, and the hen, responding promptly to his calls and popping to the slide for him to feed her through the wires. Then put in a nest-pan and withdraw the parting slide. A few days later when you see them going in and out of the nest pan and calling to each other, put in a nest bag. Stop giving egg food when the hen has laid. If you cage in a single compartment put the hen in it, and hang the cock close by where he can see the hen and feed her through wires. As soon as this takes place put him in with the hen. On no account put them in different rooms before mating them. Any time now, when the birds are in the above fresh condition, you may mate them.

Birds out of Condition.

W. H. P.—I do not think the samples of seed you send are likely to cause your birds to be out of condition through being fat. The sample of Canary seed is a very poor, badly flavoured quality, that I should not care to use at all. It is also very small. The paper marked No. 2 arrived quite empty; its contents being distributed in the wrapper amongst portions of other samples; therefore, I cannot give an opinion about it. Samples should either be sealed in small envelopes or have the package tied round with cotton, to keep the paper from coming unfolded. Get a better quality of seeds for the birds, and for the next week treat them as advertised to "W.F.," for bowel trouble. At the end of the first week, continue to feed in the same way, and give twenty drops of Chemical Food in the water every second day. Examine the cages well to see whether red mites are at the root of the trouble. A bath should be given two or three times a week, and in this mix a few drops of quassia extract, if you find any signs of mite. I presume you keep the cages supplied with clean gritty sand.

Gone off Song.

A New Reader.—Certainly I could give you a reason, or a dozen reasons, why the Canary you bought when it was "supposed to be in song" has not sung since. A change of diet, for the worse; or temperature, ditto; or it may be kept in a draught; and many other suppositions might account for it. I note you say it was "supposed" to be in song, so perhaps after all it was not, and perhaps also it will never sing through being of the wrong gender. See that it is kept quite free from draughts, and feed on a mixture of three parts Canary to one part rape. Give a spray of watercress, or a small dandelion leaf daily, and once a week a small piece of bread dipped in milk. You may vary this last item occasionally by giving a pinch of hemp, or inga, instead. In the drinking water give twenty drops of whiskey and ten of glycerine for a few days, and if it is a cock it should soon begin to make the fact known.

All Seem too Fat.

"Dirty Dick."—No. 1: You must limit the quantity of Canary seed, and give only a small teaspoonful each day, supplementing this with an unlimited supply of green food-watercress, or chickweed preferably, if you could get the latter. Continue giving the Epsom Salts every second day, adding twenty drops of whiskey to the water twice a week, and at the end of each week omit the salts one day and give six drops of aromatic sulphuric acid instead. Treat both Nos. 2 and 3 the same; but No. 3 will probably require a shorter course of treatment, and No. 2, a rather longer course than No. 1. In a general way, see that your birds are protected from chills and draughts—the former either resulting from cold currents of air or excessively cold baths. If the birds do not improve on the above treatment in the course of a fortnight, write me again, and say how and where the birds are kept—that is, whether in warm, or cold room, indoors or outdoors.

Hens out of Condition.

W. E., Hull.—If the diet you mention is what you have been giving all winter, it is probably the case that the hens are overfed. The mixed seed and egg food should only be given twice each in one week. For the present drop the egg food altogether for the hens and give the hens three times a week for a fortnight a small piece of sponge cake slightly moistened with sherry. In the drinking water give six drops of syrup of buckthorn every alternate day for a week, and on the intervening days six drops of aromatic sulphuric acid. During the next week give twenty drops of Chemical Food every alternate day. The cock, of course, you will not treat at all, as he does not seem to require any treatment. The drug you enquire about is a very useful tonic to brace up the system generally; you will most frequently notice it prescribed to follow a course of purgative treatment.

Brevities.

Roller Not Singing (Novice No. 40).—If the Roller is not an "alderman" now, he is probably doing his best to become one. Feed him plainly, and give as much Epsom salts as will cover a sixpence in his water two days in every three for a fortnight, and at the end of each week give six drops of aromatic sulphuric acid and ten of whiskey in the water for one day. Give a little green food daily—watercress preferably.

Seed Samples (Novice No. 40).—No. 1 Canary is an excellent all-round sample. A proportion of the grains are rather small, but all is very plump and of good quality. No. 2 Canary is also of very good quality, but is very small in size. Its small size is the only point against it. I should prefer No. 1, the bulk of which is of good size, even if it cost a trifle more per peck. No. 3 Summer Rape: This again is an excellent sample all-round. No. 4 Niger or Inga: Is just a trifle rusty in colour, but is of good size, plump, and quite sweet. Altogether, you have got hold of a very good sample of seeds.

Crest Dropping Out (Constant Reader).—Examine the bird well to see if it is troubled with grey lice, and the cage to see if red mites are present. In either case they must be eradicated. Add a little quassia to the bath once or twice a week. Anoint the bare places slightly with sulphur ointment twice a week, and give the bird twenty drops of chemical food in the water every second day for a week or two. If the bird appears healthy and vigorous in all other respects, save for the crest feathers dropping out, I should not hesitate to breed with it. But do not be in a hurry to mate it. Wait and see the effect of the above treatment before doing so. Glad you like "Canary Breeding for Beginners," and think it "a good sevenpennyworth."

Roller Moulting (H. Holderness).—The kitchen is probably subject to great fluctuations of heat, which keeps the bird continually moulting. In your case it would doubtless be better in a room without a fire, and free from damp and draughts. Feed on a mixture of two parts Canary and one part rape as a staple. Give a small piece of sponge cake with a few drops of sherry on it twice a week, and a dandelion leaf daily. Discontinue all other foods. In the water give for the first day twelve drops of syrup of buckthorn. Afterwards give twenty drops of whiskey, ten of glycerine, and as much ammoniated citrate of iron as will cover a threepennypiece every second day for a week or fortnight, as may seem necessary. Stop it when the moulting ceases. A couple of mealworms a day would do this bird good.

Feeding Rollers (E. B.).—As a staple give a mixture of two parts Canary to one part rape. In addition, give the cock a few grains of hemp every other day, and twice a week a small teaspoonful of egg food, and a leaf of dandelion daily. A pinch of gold of pleasure seed would help him further if he still keeps backward. Give the hen a little egg food, and a pinch of inga twice a week, and a spray of greenfood, watercress preferably, every second day. As the birds are in a cold room you will probably be the gainer by their not coming very forward just yet. If they are fit to mate by the end of the first week in April you will still be in good time to get two broods of young.

A Mixture (P. S. Pratt).—Unless your aviary is a very small one it is not necessary to remove the two Mules whilst the Canaries are breeding. They will probably not interfere at all. Leave them in, and keep your eye on them during the first nest, and remove them if they appear very meddlesome—not otherwise. Do not attempt to breed the Budgerigars in the same aviary as Canaries, unless the aviary is a very large one. The mixture may succeed, but the chances are all in favour of the Canaries being found with broken legs and missing scalps.

Prospect not Rosy (F. Yardley).—Am afraid you will do little good with the Green Crest hen. Your management is not good, or you would not have mated them so early. The bird is probably over-fed. Give plain Canary seed only, with plenty of green food, for next fortnight, and during first week give six drops syrup of buckthorn in the water every second day. At the end of week give six drops of aromatic sulphuric acid for one day, and continue the next week with twelve drops Chemical Food every second day. After that, treat as advised to "Amateur," giving only one-half the quantity of egg food, named; using watercress instead of dandelion, and let the hen come into breeding form gradually. Do not try to hurry matters, even if it is late before she can be paired up again. But do not expect much good from her.

Not Breeding (A Regular Reader of "C.B.").—Am inclined to think the cause of your birds not attempting to breed is that they are all hens. Do the supposed cocks sing at all? You might give them six drops of syrup of buckthorn for a couple of days, and afterwards twenty drops of Chemical Food every second day, for a week, and meanwhile feed and treat as advised to "Amateur." If they show no signs of wishing to mate by the middle of April, at the latest, I should advise you, considering the birds' ages now, to get rid of them at once and start afresh with one or two undoubted pairs of birds.

Sample of Sand (A.R.W.).—The sample of sand you send is quite suitable for either cages or aviaries, and if breeding pairs are well supplied with cuttlefish, as they should be, you need not trouble to supply any other kind of grit, as this sample contains plenty of grains quite as large as the birds require for digestion. For use in small cages it would be an advantage to give it another rinsing in clean water to prevent it soiling the birds' tails, as I expect it would do otherwise, as it stains the fingers a little when rubbed between them in a moist state.

Soon Gets Tired (Glasgow).—Give the Border cock five drops of syrup of buckthorn one day, and ten drops of Chemical Food the next, and continue to repeat them on alternate days for a week. At the end of a week give six drops of aromatic sulphuric acid for two or three days. Of course, give all these things in the bird's drinking water, not direct into the beak. Drop the linseed and niger out of the mixture you mention. You do not say how often you give this mixed seed; but about twice a week, every third day, would be sufficient.

Bowel Trouble (W. F.).—Such elaborate mixtures of seeds and biscuit as you send a sample of are not suitable for regular use for caged birds. Feed on a mixture of three parts Canary seed to one part summer rape, and give a very small piece of bread dipped in milk once a week, and a spray of green food daily. In the drinking water give as much Epsom Salts as will cover a sixpence, ten drops of glycerine and twenty drops of whisky every second day for a week. At the end of that time give six drops of aromatic sulphuric acid for two or three days.

Seed Samples (G. Tate).—The sample of seed you send is quite sweet and good, but it is very thin, so that the quantity of husk is rather out of proportion to the size of the kernal. A plumper grain would come cheaper, even if it cost a little more to buy. Give the birds that shell the seed and not eat it a little Epsom Salts for one day and afterwards give five drops each of tincture of gentian and dandelion juice every second day for a week.

More Seed Samples (F. L.).—1: Spanish Canary is a very fair sample. Its only fault is in being rather small. Still the quality is all right, and it is not dear at the price you name—2s. 10d. per stone. 2: Summer rape is also a nice mild sample, but seems rather new. It should be improved by a few months' proper storage.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Chaffinch-Canary Hybrid.

F. Harrison.—No doubt you saw my reply last week to another querist concerning this bird. The fact that it says: "Pink, pink," "unmistakably like a Chaffinch," as you put it, does not go to establish its genuineness, as you appear to consider, but exactly the contrary—it makes me more convinced than ever that it is a rare-feathered Chaffinch, purely and simply.

Feathers Coming out by Dozens.

E. H. Jones.—It certainly is not the proper time for moulting. Your bird is deep in what fanciers term a "cross moult." You can do nothing now except wait patiently until the renewal of the plumage is completed. Stir a small teaspoonful of Parrish's Chemical Food in two tablespoonfuls of drinking water every other day; this will assist. Feed him generously (see reply to "Mid" last week and follow the advice there given). Possibly you bought a Linnet which had been previously kept in a hot room, and yourself kept him in a cold room (or vice versa). Changes of temperature like those are practically certain to induce cross-moult. Sometimes even the changeable weather will cause a bird to start dropping feathers. You should now keep the Linnet in a not too cold room (a little heat would be beneficial), and quite out of draughts. The box cage is the best you could use. What do

you want to use the hen Canary for? I must know this before I can advise you how to feed her. If for Linnet-Canary Mule-breeding, then I gave the information in our last issue.

An Aviary, and a Lark.

R. S. Dawson.—It is quite correct that British Finches are, on the whole, not suited for keeping in an aviary of the Crystal Palace type. The only way to get any satisfaction out of them when housed in this way, is to obtain very steady birds at the beginning—and these are expensive, more or less, as a rule. Even then, between one or another of the ought-to-be-happy family there is sure to be bickering, and perhaps serious fighting. If anyone asks me about the stocking of a Crystal Palace aviary, I am conscientiously compelled to advise them to avoid Britishers, and go in for a varied collection of the smaller Foreign seedeaters. My friend Mr. Page will, if you write him, gladly give you a list of cheap and suitable species. You could venture to keep a Goldfinch, Linnet, and Bullfinch with them, I feel sure (you should have stated size of aviary, however). Your feeding of the Lark is fairly good; but it would be vastly improved if you gave the stock mixture advised "Larnov" last week. German paste, bread-crumbs, and crushed hemp are things I only occasionally offer Larks of my own. If your bird is steady, and does not sing in a week or two under the new regime, then I should certainly think it is a hen.

Sunflower Seed.

W.P.—I do not invariably give my Goldfinches a daily feed of sunflower seed; often only three times or so a week. Siberian Goldfinches I give it oftener and more liberally. About a dozen (not less) seeds form my average offering to one bird. My Bullies I give it to practically regularly, as they get no hemp seed (except the hens up for breeding). Whether the sunflower should be cracked depends on the individual bird. Some British Goldies won't crack it; others do so readily. The same remark applies to Bullies, though they, as a rule, are devoted to sunflower once they taste of it. It is only necessary to roll a jam jar lightly over it. It need only be shelled (or shelled and broken) while one is trying to coax a bird to taste of it.

Is it Thistle Seed?

Jack.—No; the sample you send is certainly not the kind of thistle seed that should be used as food for birds. No bird-seed merchant ought to sell it to you as such. If anyone has done so, probably they themselves are not aware that this is not the right seed, for it is a kind of thistle after all—one of the ornamental thistles, I understand. The proper thistle seed is similar in shape to that you send me, but not more than one-third the size, and a light gray (a warm gray) in colour; further, *it is never ribbed*, but always smooth. Send for a small quantity of the latter from one or other of the seed-dealers using our advertisement columns, and you will be safe for the future. You can congratulate yourself on the Linnets and Goldies refusing to touch the other. One or two correspondents have assured me that they have lost birds by reason of giving it to them.

Concerning Linnets.

F. Yardley.—1: There are some Linnets of a fidgety disposition that no treatment can make really steady ("finger tame," as the phrase goes). But these "always on the move" Linnets are not necessarily bad singers (that is, not free singers), but on the contrary are often very fine singers indeed, though oft-times inclined to be shy while human beings are near. From the description you give I should say the "slim, Yorkshire-Canarylike" Linnet you describe is a hen. If it seems to be thickly pencilled (heavy, streaky-looking lines) on breast and flanks, then you can take it as a certainty. Many hen Linnets are very nice-looking birds—much nicer looking than most cocks, so far as markings go. 2: Yes; it is quite possible to breed Mules from a Linnet whose beak does not turn blue-black; some birds' beaks get a much deeper colour than others. But a deep blue-black bill is a grand sign that the bird is properly "sprung"—give me a bird which possesses it.

Wheatear's Leg, etc.

J. P.—I have found Zambuk a very good dressing, and recommend you to use it twice daily on the leg of your Wheatear. Provide two perches, at least, and a dish of water for bathing on suitable days. The best food is that described in reply to "Dahlias lucinia" last week. I think highly of cold boiled (mashed) potato to mix into the food of insectivorous birds, and use this (and carrot) freely personally, and with the best of results. Use very coarse-cut pine sawdust for the cage bottom (free from the fine dust) if you cannot get peat moss litter broken up very small.

Goldfinch Ailing.

W. H. P.—Never mind about the Finch living almost entirely on hemp-seed; let him eat what he will. You should supply good teazle, and maw and niger in plenty. Give him a day on sulphate of soda—as much as will just lie on a shilling, dissolved in two tablespoonfuls of drinking water. Place this in his cage at night (last thing), and replace it with plain water the next night. The following morning well stir 6 or 7 drops of chlorodyne into the same quantity of drinking water, and give fresh daily for 3 or 4 days. This may quite likely pull him round. You should keep your eye on his excreta and regulate strength of chlorodyne (it is very powerful) by the state of the bird's bowels.

Concerning a Goldfinch Mule.

F. S.—Nothing in your letter affords a clue to solve the mystery. I should say, off-hand, that the behaviour is simply due to old age—or, at any rate, to weakness. Do you know the age of the Mule? You could give a teaspoonful of mixed maw and niger seeds (equal parts), now and again, as a special treat. A good tonic and recuperative medicine is the quinine wine (or orange and quinine) sold at most chemists, or high-class grocers. Stir a small teaspoonful into two tablespoonfuls of drinking water every other day (plain water in between), for three weeks or so. Any wine left over you will find personally "comforting," if not exactly "grateful."

Four Questions too Many.

A Boy.—As you are a new recruit, I will forgive your overdose of queries this time. 1 and 2: I should mate cock Greenfinch and cock Goldfinch with the two hen Bullies; cock Linnet with hen Goldfinch; cock Goldfinch No. 2 with the hen Canary No. 3. You could very well divide the flight cage in the centre, and use it for two pairs. Let a Bullie hen have it, if you devote the whole to one couple. 4: The packet seeds put up by any good firm are "reliable" enough. 5: The Bullies should have the same stock mixture as the Linnets, but a dash of sunflower seed should be added. The Greenfinches will also do well on the same, with plenty of sunflower and a little hemp. 6: I doubt if they will eat mealworms now, though when in the moult British Finches often show a great partiality for them. Hide a few tiny ones in thistle heads, or in knapweed knobs. They may eat a few good ants' eggs soaked in new milk and drained before being offered. See they are always fresh and sweet. 7: Note the reply to "A. McWatt," which appeared in last week's issue. Thanks for good wishes.

Brevities.

Sex of Thrush (Skib).—From what you say, I am of opinion the bird is a male, and will sing out as soon as you get any "balmy spring" in your quarter of the globe. Hang him in the sunshine (when available), by all means.

Hemp Seed (W.H.P.).—I overlooked this sample when making other reply. It is only a just fair sample of hemp, too many of the corns being old and stale; cut through, the kernel shows discoloured and dried up. It is not clean and bright looking seed, as it should be.

In-breeding (C.K.).—As "in-breeding" is not unknown, under given circumstances, in a state of nature, I don't think you need have any scruples on the ground cited. If there be anything in your objection, then some of the Royal families will have a deal to answer for.

Concerning a Linnet Mule (W.E.W.).—Try gently anointing the place with a light smear of Zambuk twice daily (morning and evening). It will at least remove the irritation. Let me know in 10 or 12 days' time if the place does not seem improving. Thanks for kind remarks.

A Mixture (Railway).—The following seed mixture will suit the birds you name admirably: Canary three pints, teazle two pints, hemp one pint, summer rape, charlock and linseed half a pint each. Reduce the linseed to a quarter-pint during summer; or drop it altogether, if you like. Give the packet Finch mixture for a change; also a little wild seed mixture, maw, niger, thistle, dandelion, etc.

Thrush's Spoilt Plumage (Daily Mail).—Alas! I know many more "disreputable looking" Thrushes, and some of them, like your own, "whistle lovely." But their disreputable appearance is not always caused by their wildness. Unless your Thrush is steadied, he is likely to always have broken plumage. To do this you will have to take him indoors to a room wherein people move about freely, and endeavour to overcome his shyness. The broken plumage could only be remedied by extracting the damaged feathers, and this I advise you on no account to attempt. He will come slick and span at the moulting season. Let him bathe freely.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Rearing Young Grey Parrots.

"Parrot."—So long as the birds are kept out of draught the temperature of any ordinary living room will be ample. Note: The losses among young Greys are very numerous and discouraging owing to the insanitary conditions existing during importation; and the deaths usually occur from septic troubles, which are infectious, so that after a death a cage must be thoroughly sterilised before being used again. As soon as young Grey Parrots can eat freely of the following seed mixture—canary, oats, hemp, wheat, dari, and sunflower seeds, of the four latter kinds only use half the bulk of two foremost kinds—stop all soft food; till this happens you must feed on boiled maize (this only keeps fresh one day, and food vessel must be kept strictly clean), gradually weaning off this when the seed mixture is being eaten freely. In addition, you must supply ripe fruit, nuts, plain biscuits, and keep a clean piece of cuttlefish continually in the cage. The Amazon is more hardy than the Grey, losses are not so numerous, and the treatment is practically the same.

Seed Eaters for Outdoor Aviary.

J. McG.—All seed-eaters, or nearly all, need some soft food when rearing young, and some species will not rear without insects also. However, the following will thrive well and breed if treated much the same as Canaries during the breeding season, and get in addition a liberal supply of millet and spray millet; fresh green food is very important, and a fresh supply should be given twice daily during the summer. You do not give me the size of your aviary, nor yet your county, so I can only suggest a few of the more hardy species, and state that each breeding pair should be alloted two feet of the frontal measurement of aviary. Zebra, Ribbon, Yellow-rump and Ruficanda Finches, Java Sparrows, Diamond Doves (very beautiful and minute for Doves), Spice Birds, and for display of colour, say odd males of Madagascar, Napoleon and Orange Weavers. If you require rarer species, please supply your county and size of aviary, and I will try and help you further.

Breeding Cutthroats, etc.

Novice.—(1) There is no reason why the Cutthroats should not breed in your cage. Do not lose patience if they do not do so early in the season, as they often defer breeding till autumn in this country; supply ants' eggs and soft food, in addition to seed, when they have young. The nest in a cage is apt to become infested with lice, so it must be removed and a fresh one inserted as soon as the young begin to perch. (2) A C.P. aviary is too limited to expect two pairs to breed therein; at the same time, such is not impossible. I do not think the Spice Birds will breed in a cage, but the Zebras will do so. Put in one of the wire partitions and leave the Zebras the larger space. (3) If you have a spare room, that is the best place for them, as they are more likely to be quiet and undisturbed there, and breeding will be more probable. They must have plenty of fresh air without draught. It would disturb breeding birds too much to lift them out and bring them in daily. Wish you luck.

What Parrot?

E.J.H.—It is either a female Ring-necked Parrakeet or a young male of the same species in immature plumage. Most of these birds talk very clearly, are good mimics, and also many of them, alas! good screamers into the bargain. However, properly trained, and checked while young, they should not become a nuisance in this respect. Keep it where it hears plenty of conversation; see that it is not irritated in any way, and it should do well. You will find the full diet given in replies to other correspondents in this issue, with this reservation that your bird does not require any drugs. Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food.

Pekin Robins, Rosellas, etc.

"Sorosis."—(1) There is but little outward difference in the sexes of the birds, the chief difficulty arising from the variation as to degree of intensity of colour, which is more or less common to all species birds. I can only say that the bill of the female is slightly narrower at the base, and broader at the tip than that of the male, but the difference is not striking; hen plumage is also not quite so brilliant as that of the male, the yellow areas round the eye or chin and throat being paler. This is also the case with the red edgings to the wing feathers. (2) As regards the Rosella, I know of no constant outward distinction between the sexes. It is claimed that there is a small green spot on the crimson of the nape of the female. While this may be so, and is with some individuals, it certainly is not constant; providing the birds were of about the same age, I should pick a larger and small bird, and also, if possible, secure the small one with colours not so intense as that of the larger bird. The beak of the female is a little broader at the base, and also slightly shorter than that of the male. At the same time, I must confess that if I came across a bird with the small green spot aforementioned I should accept it as a female. I have a true pair at the present time, neither of which possesses the said green spot. They do not always settle down to breeding at once; will probably not do so till next season. Cockatiels and Rosellas agree well together. (3) No, I do not think the Necklace Dove hardy enough for the conditions you name; in a larger aviary, with a suitable shelter shed attached, they would be all right. They would be all right in your outdoor cage from May to September, but would then require to be brought indoors for the winter.

Java Sparrow in Poor Plumage.

E. Wright.—I should cage this bird up separately, and lightly anoint the bare parts with clean vaseline; make its drinking water just saline with Epsom salts for one day, and follow this by well colouring the drinking water with Parrish's Chemical Food. If it will eat a little sponge cake that has been slightly damped and dipped in flour of sulphur, this will help matters a little. Supply it with Canary, millet and spray millet, a few crushed oats, green food; this must be fresh, and not gathered at this season till the sun has cleared away all frost. Crush some cuttlefish to the size of millet seeds, and scatter a little over sand tray daily. Gas will not harm birds, providing they are kept below the level of the lights. Sudden changes of temperature, such as from a warm room to a cold one, are very bad for all species of birds.

Rearing Grey Parrots.

Maconechy.—If you have a spare room, and could erect a strong cage, say six feet square, and of the same height, or a little higher, you should have a reasonable chance of success, but you must protect walls and woodwork with wire-netting. Other conditions and furnishings would be the same as given in previous reply. If out of doors, they would need a sound and weather-proof shelter shed to retire to when they felt disposed. These birds, some years ago, where given their liberty in the grounds of a gentleman in one of the Northern counties, and they did well till they began to wander further afield, and then they soon suffered the fate of all uncommon birds at the hands of so-called sportsmen.

Java Sparrows, Waxbills, etc.

Distressed.—(1) Treat this bird as per our reply to E. Wright in this issue, and there should soon be an improvement if the bird is not really diseased, which does not appear to be the case. With your bird try crumbling the sponge cake, very slightly moist it, and then dust it with flour of sulphur. (2) It all depends on the size of your aviary, and as to whether there is a sound and weather-proof shed attached to your aviary. If that is so, they should be perfectly safe out of doors, providing the aviary is sufficiently spacious for them to take plenty of exercise; it is this latter condition which enable Foreign aliens to combat the vagaries of English weather. The shed should also be well lighted, so that food might be placed therein during the winter months, though there should always be an outlet so that the birds can have ready access to the flight when they so desire. Half-inch mesh wire-netting is plenty fine enough to confine even Zebra Waxbills, but see that you get this, as ¾-inch mesh is often innocently sold as ½-inch by many dealers.

Budgerigars Outdoors.

"Aigburth."—Your aviary is rather narrow, but you can put in it one pair each of Green and Yellow Budgerigars and Cockatiels. It will be necessary for you to dispose of any young reared as soon as they can look after themselves, as your aviary does not provide accommodation for more than three pairs. You must have double the number of nesting husks you have pairs of birds. As regards water fountains, you cannot do better than get one of Jones' sanitary water fountains (see advt. columns), and for seed hoppers I shall not attempt to advise you as to one to fix on the outside, as I don't believe in them at all for an outdoor aviary; and for the birds named ordinary glazed flower pot saucers answer as well as anything. Far better than hanging a hopper outside the wire netting is a small flap door in front of aviary, just large enough to get food and water vessels in and out.

Baby Parrot Ill.

E.P.—I much fear your bird is suffering from some malignant septic malady contracted during importation, and also fear that in its present weak state, but little can be done for it. However, unwholesome it may be, you must perforce give it a little milk sop (rather sloppy) and put a teaspoonful of Benger's or Mellin's food with its daily supply. Continue to use the glyco-thymoline and cold mixture. If it lives, as soon as you can, get it on to the diet regularly advised in this column. Give it a few drops of castor oil, not more than six, direct to the mouth. You had better report progress in a week or ten days' time, but I very much fear the bird will be dead before this reaches you. It is always best to ascertain when purchasing a bird how it has been fed, and even if this is somewhat unwholesome to continue with it a short time, gradually weaning it on to the correct diet.

Budgerigars with Others.

A.M.M.—It will be safer if you keep the Budgerigars for a week in the coldest part of your dining-room; then you can with safety remove them to the top-room mentioned. It is the sudden change from warm to cold that has to be guarded against, otherwise these birds are quite hardy. Choose a day when it is warm and sunny and appears fairly settled, and if you make the change early in the day no harm should result. Your treatment is correct, but I do not expect they will attempt breeding while the male is out of condition. Get from your chemist the following mixture: Oxymel of squills, Ipecacuanha wine and glycerine in equal parts. To two tablespoonfuls of water, add one teaspoonful of the mixture; supply this daily for a week or more, not supplying any drinking water during such period. I have never found the Pekin Robin interfere with any of its companions however small, and though I have never kept it under such conditions, I know those who have, and nothing amiss came from their association with smaller birds in such a cage. But there is so much individualism in birds, that where large and small birds are kept together in a cage they should be watched and any pugnaciously disposed individual caged separately. I do not care to mix Softbills within the limits of a C.P. cage, and should not care to hazard a selection; though a pair each of Grey Cardinals and Pekins would be most likely to agree together, or one or two odd cock Weavers with a cock Pekin would make a bright display.

Feather Plucking Cockatoo.

Western.—Your diet is all wrong, stop milk sop, tea and table scraps at once, and possibly the bird may leave off this annoying habit. Put one teaspoonful of Dinneford's magnesia in its drinking-water (two tablespoonfuls) twice a week, giving 3 or 4 doses in all; when not giving the magnesia, well colour its drinking-water with Parrish's chemical food and continue same for some time. Spray the parts the bird is in the habit of plucking with quassia solution; this will make the plumage taste bitter and so act somewhat as a deterrent. If the day be cold or raw, see that no draught reaches the bird after spraying till it is thoroughly dry. There is nothing for it but patience; this habit of plucking is not readily given up. Diet: A seed mixture of Canary, oats, hemp, small maize, wheat, dari and a little sunflower seed. Also give ripe fruit, little boiled potato (dry), green food, nuts, plain biscuits, and keep a clean piece of cuttlefish continually in its cage.

Brevities.

Breeding Javas (Anna Duke).—Javas usually prefer a box, say about 6 inches square, with a circular hole cut in it for entrance; or a box similar to the one figured under "Illustrated Ideas" In a recent issue of CAGE BIRDS would fully meet the case. I have had them successfully rear young in a husk, but when they have the choice my birds have usually chosen a box. Leave the husk in the cage, and put in a box at the other end, and they should settle down in one or the other, and successfully reprodnce their kind.

Song of the Pekin Nightingale (Lover of Song).—The song of a good performer is nearer that of the Blackcap than the Nightingale. I do not think the most ardent admirer of these lovely birds would think of comparing their song with that of the British Nightingale. The merit of individual birds in this respect is very variable, but even a moderate performer is a beautiful and entertaining pet, and not difficult to keep in condition, providing its cage be a roomy one.

Treatment of Grey Parrot (Constant Reader).—As a constant reader you are aware of the diet we advise for Grey Parrots regularly in these columns; diet yours on same lines. You do not say how you are feeding. Do not give tea, coffee, or milk slops, or any kind of animal food. Make the bird's drinking water quite saline with Epsom Salts for one day, repeating same after a three days' interval. Put a few chilies with its seeds daily. Keep it warm and out of draught, but not in a vitiated atmosphere. If the cough gets no better, put one teaspoonful of the mixture, as below, in drinking water (two tablespoonfuls) daily until relief is given. Mixture: Ipecacuanha wine, oxymel of squills, and glycerine in equal parts.

Feeding Singing Finches (Jerome).—Both Grey and Green are natives of Africa, as also are Silverbills. The treatment of all three is similar—Canary, millet, and spray millet, with greenfood, grit and water ad lib. for drinking and bathing should suffice to keep them in health. Greenfood must be fresh, clean, and thoroughly sound. It must not be given when covered with frost; grit must also be supplied freely, and a piece of clean cuttlefish kept hanging in the cage. I cannot call to mind any recent article, but my book on Foreign Birds will be published very shortly.

A Feather-Plucking Roseate Cockatoo (Binley).—Your diet is correct, but I much fear it will be a work of patience, seeing it has now become almost confirmed in the habit. I can only advise you to persevere with the remedies advised to "Western" in this issue, of course, in your instance, not altering the diet in any way.

A Feather-Plucking Ringneck ("Roller").—I am of the opinion that your bird will be all right again in a short time, and so long as there are no sudden changes of temperature it is immaterial whether you keep it in your living or sitting room. Otherwise treat your bird as advised to "Western" in this issue, but make no change in its diet.

What Bird? (B. J., Burnley).—It is a female Ringnecked Parrakeet. It is a freely-imported species, and in the company of rarer birds would stand but little chance. At the same time when in finest condition there is no reason it should not catch the judge's eye where competition was not too keen.

A Ringneck Not Recovering Plumage (G.W.).—Diet the bird on the seed mixture advised to "Parrot" in this issue, and give, in addition, for variety, ripe fruit, nuts, plain biscuit, and a little boiled potato or cabbage or brocoli stem (without any gravy), cuttlefish, grit and water ad lib. As to medicinal treatment, see reply to "Western" in this issue, persevere with same, as recovery cannot be rapid in a case of such long standing. Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food.

Grey Parrot Rather Loose (Restall).—Your dietary cannot be improved upon, but it will be well for a time to crush some cuttlefish to about the size of millet seed and mix this with its seed mixture; also keep a piece of clean cuttlefish in its cage. As the looseness has been almost chronic, it cannot be diarrhoea, and I should simply try the effect of putting it on a course of Parrish's Chemical Food—half a teaspoonful to one tablespoonful of water—and continue this for a time. Both the chemical food and cuttlefish have a slight tendency to induce constipation, and should prove effective; if not, please repeat query, and I will try and help you further.

Grey Parrot Eating Only Sunflower Seed (H. C.).—There is little doubt but that such an exclusive diet of sunflower seed will ultimately ruin the bird, however well and finely conditioned it appears at present. Diet it on equal parts oats, hemp, small maize, canary and sunflower seeds, put a hopper in its cage each morning, and do not renew same till next day; it may sulk a bit at it at first. Give also for variety ripe fruit, plain biscuit, nuts, and a little boiled potato or cabbage stem (without gravy); keep a piece of cuttlefish in its cage. So treated, even if it sulks at the other seeds for a time, it will not be on really "short commons," and should ultimately take to the other seeds.

Amazon Parrot with Indigestion (E.W.).—Dissolve six grains each of sulphate of soda and chlorate of potash in two tablespoonfuls of water and give this at intervals of two days, say three or four doses. In between you can give the cold mixture, if necessary. In all other respects treat as per previous reply. The bird should certainly get over it.

Breeding Budgerigars (Esperance).—(1) These birds are very modest in their wants; Canary, millet, and spray millet, with greenfood (as much

grass in flower as they will eat), cuttlefish, grit and water, a few oats occasionally, and these latter regularly with a stale crust of household bread when they are feeding young; (2) in captivity Budgerigars breed practically all the year round, only stopping for the moult, but in cages where, of course, only one pair can be kept in each, they are very often some little time before they settle down to nesting purposes.

PARK & LAKE AVICULTURE

Answered by FRANK FINN, B.A., F.Z.S., M.B.O.U., etc.

Management of Squirrels (H.M.).—The great thing in managing squirrels is to give them plenty of room; the cages usually sold for them are far too small, and a squirrel cage should be at least two feet every way. The woodwork, if of soft wood, should be protected at edges with tin. Give them branch perches and a sleeping box. It is better to keep them outside, in a large hutch made of a packing case, if possible; or make a place like an aviary, but don't put them along with any birds, as they are partly carnivorous, like rats. This must be borne in mind in feeding them; as well as corn, fruit, and nuts, which are the staple food, give mealworms, and other insects, young sparrows, sparrows' or pigeons' eggs, or in default of these a little hard-boiled egg, or a bone to pick. Don't give much soft food other than this, unless they are quite young, when bread and milk is good; and see they always have something hard to nibble at to keep their teeth in order. Bed them down with sawdust, and if they are old-caught be careful how you handle them, as they bite sharply.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a report direct. 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Canary (Maw).—Bird fever.
Canary (J. Howie).—Apoplexy. Bird fever.
Canary (W.H.H.).—Death caused by anæmia. Body in poor condition.

GENERAL.

Answered by THE EDITOR.

C.B.U. Secretary (J. Hibbert).—The address of Mr. G. W. F. Lythgoe has been inserted very many times in our columns, and quite recently, too (see issue for March 7th). It is 25, Stamford-street, Old Trafford, Manchester.

A Question of Arrangement (D. H. Tedstone).—We are duly in receipt of your letters, etc., and have noted contents.

Dead Birds (A. Banks).—If you will kindly refer to the rules concerning post mortems, which appear on our "Questions and Answers" page, you will see that dead bodies of birds must not be sent to this office. We are sorry you broke this rule, for the corpse you favoured us with "smelt too high heaven," and cost us, after we had happened upon it, some coin of the realm for a personal "corpse reviver."

Cutting (G. Kirk).—We are very much obliged to you for sending us this cutting.

Mounts (J. Smith).—It would be cheaper for you to purchase the plates ready mounted, in the style in which we do them.

Time Larks Sing (E. Charles).—As the alleged statement was not made in our columns, it is not one with which we can deal. If you want to issue a challenge, that is another matter, and we shall be glad to insert it.

Treatise on Pigeons (L. E. Richards).—If your book is one of the original copies published in 1765 it would be worth about 7/6, or 10/-. There are, however, few collectors of old Pigeon literature, and you might wait a long time before finding a purchaser. If you are anxious to sell, it would be advisable for you to insert an advt. in "Pigeons," a journal which will be found advertised in our columns.

Whaup (A. Stables).—"Whaup" is a local name for the Curlew—possibly having some connection with the noisy cries emitted by the species.

Club Notice (J. Emmett).—Sorry we could not possibly oblige you, but at this time of the year matter for publication, which reaches us after Wednesday morning's post cannot be dealt with the same week.

Goldfinch; also Society (W. H. C.).—If the Goldfinch is equal to your sketch, you have a very good bird. How would the Lewisham and District C.B.S. suit you? The hon. sec. is Mr. H. T. Lucas, 16, Hereford Gardens, Longhurst-rd., Lee, S.E. You will find in the ANNUAL a directory of Societies.

YORKSHIRE UNION OF CAGE-BIRD SOCIETIES.

Result of the 1908 Ballot.

Election of officers: Vice-President (one vote only).—Armstrong, F., 35; Clarkson, J. S., 28; Halliday, R. (elected), 125; Johnson. E. W., 20; Sunderland, D., 75; Wellock, G., 12. Secretary (one vote only).—Dean, Samuel (elected), 170; Hill, H., 47; Mitchell, O., 55; Townend, H. B., 22. Trustees (two votes).—Brotherton, J. E., 230 (elected); Mitchell. O., 120 (elected); Ross, A., 98; Townend, H. B., 104. Auditors (two votes).—Armstrong, F., 189 (elected); Halliday, R., 224 (withdrawn); Holroyd, W., 92 (elected); Jackson, W., 55.

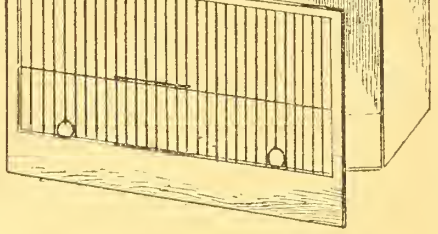
Revision of rules.—The following rules have been carried: That the officers be elected by ballot each year; carried. That the annual ballot be taken during the first fortnight in March; carried. The Union will offer for competition at each affiliated society's open Winter show a number of specified gold medals to be divided as follows: Threequarters for Yorkshire section, and one quarter for Norwich section. Not more than the four highest birds of each exhibitor to count for points. Those exhibitors (to the number of medals offered) gaining the most points in Novice Classes at the above-mentioned shows to be declared the winners. In the case of a tie the person gaining most points with money prizes shall be declared the winner, and in the event of an exhibitor qualifying for a medal in each section (Yorkshire and Norwich) he shall be considered a winner in that section in which he has obtained the most points; carried. That water tins be provided in Yorkshire classes; carried. That each society nominates 20 judges—neither more nor less—and from these the 30 (if so many are nominated) receiving the highest number of votes to be returned to each society, who shall then vote for the exact number required, and those receiving the highest number of votes of societies shall be considered the appointed judges—one for each show; carried. It will be open to anyone, during such time as the show is open, to lodge a protest, etc; carried. That the price limit in Novice classes be £5 5s.; carried. Proposed addition to Rule 37, which reads: "A Novice is one who has not previously won a Novice medal or a first prize in open classes at any show. Any person residing in the same house as a champion exhibitor shall be debarred from competing as a novice. First prizes in selling classes and First Feather shows are not included." Addition to read: "This rule shall not apply to novice classes at non-union or members' shows;" carried. That the Council of the Union provide a minimum classification for all shows held under their rules; carried. That any society requiring an assistant judge may make its own selection. No person is eligible who is one of the appointed Union judges until he has judged the show to which he is appointed; carried.
—FRED HAMMOND, hon. secretary.

ILLUSTRATED IDEAS

Under this heading we shall illustrate weekly some ideas useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 191.
A CAGE-DOOR FRONT.
Sent by H. Calvert, 16, Morningside, Heaton, Bradford, Yorks.

Here you will find sketch of a "Door Cage Front." I have never seen such before, so I hope there will be no "clashing." Perhaps there will be some persons to

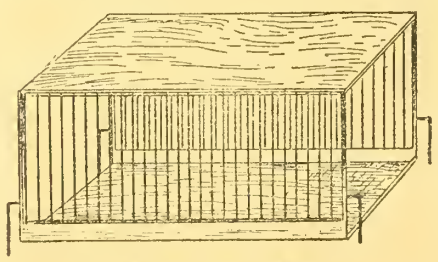


A Swing Front.

whom it will be useful; the idea is to facilitate cleaning purposes. Instructions: When you wish to clean the cage you simply open the door, and then you have the full privilege of cleaning, whiting, or distempering, painting, or anything else required. The illustration shows a breeding cage with door fixed on hinge, catch or hook to fasten door to, piece of tin fastened to bottom of door to keep grit, sand, wet, from falling out on the floor of the room when closed.
H. CALVERT.

No. 192.
TO CONNECT CAGES.
Sent by H. D. Potter, 35, Olney Street, Unthank Road, Norwich.

Am sending illustrated idea of connection for cages where they are stacked on two or three sides of the room, so that when breeding is over the cages can be turned into long flights, and the birds better able to keep out



To connect Cages.

of the way of others that are bent on mischief. All my cages have slips at the ends, as well as the middle, and I connect them with a box cage (similar to a bath cage) made of two wired frames for sides, and ⅜-in. wood top and bottom, with open ends, and hangers fixed on. I find this a good plan to get the young birds through the moult sound and well. In my room on one side are five three-compartment cages, on back five flights five feet long, and on the other side twelve two-compartment cages, four deep, so that I have four rows, which, when connected, make a total length 16 ft. each. To fix in position, open door opposite end of other cages and draw slip.—H. D. POTTER.

IN THE COURTS.

THE EXHIBITING OF BORROWED BIRDS.

Momentous Decision by a Scotch Judge

In the Hamilton Small Debt Court on March 21st, according to the "Hamilton Advertiser," Alexander Brownlie sued the Larkhall Cage Bird Club for prize money and medal alleged to be due to him in respect of prizes won at the annual show on 26th October. The defence was that the birds didn't belong to the plaintiff, and under the rules he thereby forfeited his prize-money. After hearing evidence, Sheriff Thomson held that the defence had failed as regards a Siberian Goldfinch and a Mule, but the defence had succeeded in proving that a Siskin shown by plaintiff did not belong to him. The question was whether plaintiff, in respect of this one bird, could be held to have forfeited all his prizes. His Lordship didn't think so. He, therefore, gave a verdict to plaintiff for £1 2s. 6d., being the prize-money for the rest of his birds, inclusive of the value of the medal won, and the loss sustained by plaintiff in having the prizes withheld. The Sheriff awarded no expenses to either party. He said there had been a gross breach of the rules here, and he didn't want to characterise it further. He had his own feelings on the matter. Plaintiff was represented by Mr. W. S. Mackenzie, writer, Larkhall, and defenders by Mr. G. Craig Macintyre, writer, Hamilton.

DEATHS OF BIRDS IN TRANSIT.

Railway Company have to Pay Up.

Messrs. Payne and Wallace, of the "Little Zoo," Bath, on March 12th claimed from the Great Western Railway Company damages for the loss of birds which died in transit on their line. Mr. E. H. C. Wethered appeared for the plaintiffs, and Mr. A. S. Howard for the defendant company. Mr. Howard (according to the "Bath Daily Chronicle"), said in respect of two consignments they admitted liability, and the money had been paid into Court. Mr. Wethered said the plaintiffs imported fancy birds from Australia, many thousands of them, and they claimed in respect of certain of these consigned to their customers. In each case the birds were delivered dead owing to the fault and negligence of the Company or their servants. He might say in transit from Australia, 12,000 miles, the loss of birds was only about 1 per cent. He produced one of the boxes in which birds were sent by rail to customers, and stated that a representative of the Company saw the birds so packed and assented it was a proper way to pack them. These cages, which were covered with brown paper, bore a large red label on which was printed "Valuable Live Birds, with great care." The deaths all occurred between 8th April and 21st June, 1907. The plaintiffs made a vigorous complaint about the deaths, the birds stopped dying, and none had died since. Counsel pointed out that some of the birds were insured; but insurance did not affect the question of liability, it only affected the amount that could be recovered. When not insured the Company's liability was limited to 5s., and if greater value were declared at the time the birds were consigned, the increased value was insured at the rate of 1½ per cent. In seven cases the consignments were birds, in the eighth it was a stump-tailed skink. On April 8th a Chestnut Finch, insured for 7s. 6d., was sent to Seacombe, Cheshire, and arrived dead; on April 16th, a Finch, insured for 7s. 6d., sent to Miss Drummond, Errol, Perth, arrived dead; on April 25th a bird went to Covent Garden, arrived dead; the same day three went to Miss Drummond, and two were delivered dead; on May 10th a cage of birds was sent to Lady Dunleath, Ballywater Park, Newtownards, Co. Down, by the 6.6 p.m. train, and was not delivered until May 13th, and ten arrived dead. He suggested delay in that case, in all the others he alleged wrongful handling. On May 17th a cage of about 80 birds was sent to a dealer at Martock, Somerset, by the 5.51 p.m. train; it arrived at Martock the same night at 9.36 p.m., and was delivered the following morning with 20 birds dead and 12 more died directly after arrival. The letters from the Company said the birds must have died from "natural causes" in all cases except the Martock consignment, where they alleged the "cold weather" was the reason, though it was at the end of May. Mr. Payne wrote in May, after the Martock slaughter, pointing out that the value of the birds dead was £12 18s., and suggesting that an attendant should be given a free pass to travel with birds. After his letter, although a good many birds had been sent, there had been no recurrence of the losses. Mr. Payne was called, and explained that unless the journey was to last more than 24 hours no water was put in the cages; if it was longer a wet sponge was put in. Fredk. Porch, his clerk, also gave evidence, as did an assistant to the consignee at Martock, who said the dead birds looked very rough, as if thrown about a lot, the feathers being all ruffled up. His Honour, referring to the case of Scott v. the Midland Railway, which had been quoted by Mr. Wethered, said there was evidence of accident; in this case there was no such evidence, the birds simply died. Mr. Wethered: In large quantities. His Honour: It doesn't matter, they died; your case does not seem to be on all fours with this. There might have been evidence given by the recipients; he admitted it would have been expensive. Mr. Wethered pointed out that they had had the evidence of Rice from Martock. His Honour said he had not understood the witness to be one of the consignees; hearing was difficult in that Court. Rice was recalled and repeated his evidence as to the ruffled condition of the dead birds. His Honour said he must hold that there was only one case to go to the jury—the consignment to Martock. Mr. Wethered said he could prove delay in the Irish case. The birds could have arrived at Newtownards on Sunday, the 12th of May, and Lady Dunleath sent in her motor to fetch them that day, but they did not reach Newtownards until Monday at 9.50. Mr. Howard said he was informed that though the birds could have arrived at the Belfast wharf on Sunday morning, no carters were out on Sundays to transfer them to the railway station. His Honour: What is the distance? Mr. Howard: I don't know. His Honour submitted that this case might also go to the jury on the question of delay. Mr. Wethered, in addressing the jury, said the amount claimed for the Martock consignment was £8 and for the Irish consignment £3 8s. 7d. Mr. Howard said the jury were not entitled to infer that the birds died from rough handling. His suggestion was that these birds died from natural causes. The mere fact that their feathers were ruffled was not sufficient. If there was rough handling, why didn't the whole 80 sent to Martock die? As to the delay alleged in the Newtownards consignment he did not think the Irish were very fond of working on Sundays. His Honour having addressed the jury, they found for the plaintiffs in both cases, and judgment was entered against the railway company for £13 17s. 6d., with costs.

UNDER THE WHITE ROSE.

BRADFORD West C.B.S. held their annual tea and social on Saturday last at their headquarters, when about 60 or 70 members, their wives and friends, sat down to a substantial feed. A very enjoyable evening was spent, at which Mr. Cowgill, president of the society, occupied the chair. A grand programme had been arranged, in which the artistes one and all were accorded good receptions, the affair throughout being quite up to the usual standard attained by the "Westers."

THE members and friends of the Bramley and District O.S. were down for a treat on Saturday last, the occasion being a lecture on "Breeding and Rearing the Norwich Canary," by Mr. Mennard, of Leeds. The fanciers of this variety will do well to keep their eye on the progress of the newly-formed Norwich club, and assist its work by "pushing" at all possible times the benefits to be received therefrom. I understand some good specials will be provided to compete for at next season's shows, and it behoves all interested to join its ranks as early as possible.

THE result of the voting upon the rules of the Yorkshire Union will no doubt be found in another column. The principal items carried are the novice limit of price to be £5 5s. in place of £4 4s.; the time of protest at shows to be allowed to close of show, instead of five o'clock, as before; novice medals to be awarded as last season. The item re curtailing the number of shows ends quite interestingly, the result being a tie. I suppose it will rest with the Council as to what shall be done; or will it be that the old rule must stand in consequence of the new rule not being carried? In regard to the ballot for officers and rules, this was carried again. Evidently those that do vote are of the opinion that it is the best way, and it's a great pity that more do not take advantage of their votes. A meagre return of 294 papers out of nearly 1,100 sent out gives the impression that the majority of fanciers are not as interested in the Union as they should be; but let anything be not quite satisfactory, and all the 1,100 are soon interested.

THE Yorkshire Union hold a meeting to-day (Saturday), the principal business being in connection with a proposed working arrangement with the C.B.U., and no doubt the two unions will soon be working amicably together.

FROM information received, the annual general meeting of the C.M.Y.C.C. takes place on Saturday, April 11th, at headquarters, Market Tavern, Bradford. Time, 5 p.m.; and all members and intending members are specially requested to attend. Some interesting items for discussion are upon the board, and fanciers of this variety will have full power to alter any existing rule not conducive to the welfare of the society.

DON'T forget that Y.C.C. nomination papers must be in this week-end.
"STRAIGHT 'UN."

ORDER YOUR "ANNUAL" for 1908 AT ONCE.

CORRESPONDENCE.

A CHAFFINCH SINGING PROBLEM.

SIR,—Please could any competent reader let me know, through your correspondence column, if a "kiss-you-wear" counts a chalk in a Chaffinch handicap, instead of a "kiss-you-dear." CONSTANT READER.

A CANARY'S WHITE EGGS.

SIR,—Last autumn a small yellow bird, very slim, looking between a Yorkshire and a German, flew in through my bird-room window. Finding no owner for same I kept it. I was forced to put her up early because she was plucking feathers from other hens in the same cage. Recently she laid her second egg, and both are milk white. I have been a constant reader of CAGE BIRDS for the last five years, but have never seen such eggs announced in it during that time. I thought it a bit of a novelty. When I started five years ago I only had one pair, and this year I have got thirty pairs, most of them bred by myself. The success I owe to the valuable hints and advice received from CAGE BIRDS. THE CUCKOO.

MORPETH AND DISTRICT C.B.S.

SIR,—Would you again favour us by making known through the pages of your valuable paper that the above newly-revived society is progressing most satisfactorily? We had a most encouraging meeting on March 20th, when there were a good number of members present. All present seemed to be filled with the one idea of making our society and forthcoming show a great success. We enrolled eleven new members: Messrs. Rowell, Watson, Woolett, Newelau, Berkett, Renison, Robinson, Stevenson, Griffiths, Carroll, and J. Patterson (Chirnside). We are still open to accept all fanciers wishing to join us. Members' subscriptions 3s. All members' classes will be confined to novices; a novice to be a member that has never won a first prize in open competition. We now have 35 members.

E. COWLING (Hon. Sec.).

Fulbeck Cottage, Morpeth.

HAWFINCHES AT THE PALACE SHOW.

SIR,—Would you be kind enough to allow a "Sorry Spectacle" a few lines in your valuable paper, in explanation of certain remarks made by R. Gilmour regarding the above subject? "A person signing himself 'Scottish Hawfinch" makes a sorrowful spectacle of himself before the Fancy"; so writes your correspondent. I leave it to the Fancy to judge who has made the spectacle of himself—Scottish Hawfinch or R. Gilmour. "I would like to remind him (Scottish Hawfinch) that Bathgate was a soft-bill class and not a hard-bill class as he seems to think." I did not think of Bathgate at all as either a hard or soft-bill class, but as a small town in Linlithgowshire. I suppose R. Gilmour means to say that the class that his Hawfinch was beaten in at Bathgate Show, was a soft-bill class. So it was, but it was also a hard-bill class; otherwise R. Gilmour and Scottish Hawfinch would have been disqualified, as I venture to think that a Hawfinch is a hard-bill bird. Still, if R. Gilmour says otherwise, I must bow to his superior knowledge. "Without his name to the letter it is not worth notice." Just so! R. Gilmour condescends to take notice all the same —"stoops to conquer" in a sense. Scottish Hawfinch desires no prominence in the discussion, hence the nom de plume. But he hopes to beat R. Gilmour again, all the same. SCOTTISH HAWFINCH.

STANDARD LENGTH OF THE YORKSHIRE CANARY.

SIR,—I think the Yorkshire Union has made a big mistake in trying to restrict the length of the Yorkshire. I am a breeder of Canaries and Mules of between 60 and 70 years' standing, and I cannot find one case where the birds are judged by measurement. The Crystal Palace show has just been held, and I don't read where the judges used the tape line or a two-foot rule. I have kept Canaries all my life. I pair my Yorkshires out (the best of the young), show sometimes, and sell the few I have to spare. I always can tell the best by looking at them. The judges, too, pick out the best by looking at them, and the dealers do the same. They might as well have gone a step farther and fixed the weight at 1⅞oz. or 2¼ozs., along with the 6¾in. in standard. This would have made the Yorkshire a popular bird. We will not be very well prepared for the next season's show as the Yorkshire will take a lot of training to catch the judge's eye and to come out of their cages on their own accord and lie down to be measured or weighed, if the standard of the Yorkshire Union be adopted. The stock I keep are on the large side, and they naturally breed their young the same. I will look at the longest and best many a time, and still I am not satisfied. At last I will try to measure them; I don't suppose I will be content. One-eighth of an inch is a small item on the length of a bird. At last I decide to keep them at home. The few I have to spare I sell in the Newcastle Bird Market. The biggest goes first; I get the best price for them. If there are any left in my hands they are the smallest. In all my experience I find the large ones get the preference; everyone goes for these, including the members of the Y.U., and even the secretary and committee. All of them have a warm side for a good stock bird, even suppose it exceeds the 6¾. Birds that are ever so good, if on the large side, will have a bad time of it. The judge must catch them; if they have been kept in a warm room, they will knock out their big feathers, and after the first two or three shows, instead of the first prize card adorning their cages, the exhibitors will find a card written on with red ink, "Deficient of Feather." He will have some difficulty in counting 12 in the tail and 18 in each wing; he might find some in cage bottom. I cannot see where it is a sin or a shame to be big. We have some men, good, noble and clever, and women, good looking, and head and shoulders above the average size. The Belgians, Scotch, Fancy and Lancashire are all prized for their size, and my advice is, let us breed as good as we can and as large as possible, and let us patronise the shows that have not adopted the 6¾ inch standard as one of their rules.

WILLIAM RICHARDSON.

A SUGGESTION re PRIZE CARDS.

SIR,—I quite agree with W. P. Jones in his remarks that the opportunity of seeing birds at shows is often spoiled by the show cards in cage fronts, but I think the plan we adopted at our Sudbury (Suffolk) Show last year even better than his suggestion. We had gummed slips in different colours for 1st, 2nd, 3rd, etc., awards. They were 2¾in. by ½in., and were very easily attached to the fronts of the cages, on a level with drinking tins. These slips can be obtained at the price of 2d. per sheet of about 25. We were very pleased with the effect. Clean, unbent cards can then be sent with prize money, or packed in with cages. Anyhow, an exhibitor knows where he is placed, on birds arriving home. It is no new idea, but gummed labels attached in this manner might be adopted by many shows which now put big cards in the wires of the cage fronts.

JAMES H. BROWN.

Hon. Treasurer, Sudbury Show.

STANDARD SHOW CAGE FOR BRITISH BIRDS.

SIR,—I was very pleased to read S. E. Jones' letter in your issue of 21st inst. As a British fancier, I for one strongly oppose the standard show cage. Why cannot a man please himself what coloured cage he shows his birds in; so long as they give him satisfaction, it should not make the slightest difference to any judge of British birds, and in my opinion it does not. I have no doubt this matter has all transpired through a few jealous, pigeon-hearted fanciers who neither know how to make a cage nor how to show their birds. Our friend Jones states he makes his own cages; so do I. I have just completed three new ones (making a total of seven) for the next show season, at a less cost than 1s. each. Then why should I or any other fancier be compelled to pay 2s. 6d. or 3s. per cage for more? The labouring man cannot afford to do it, and so sure as we are compelled to have the cage in question, it will be a big knock-back to the coming shows. Trusting the British fancier will strongly protest against it. G. D.

BENGER'S
Food
is quite distinct from any other. It possesses the remarkable property of rendering milk, with which it is mixed when used, quite easy of digestion by infants, invalids and convalescents.
Benger's Food is sold in Tins by Chemists, etc., everywhere.

LENDING BIRDS AND OTHER MALPRACTICES.

SIR,—Seeing that the C.C.B.S. had always done justice to their members, why did not the officials deal with the case of the Welsh judge? The facts (as mentioned in my letter in March 14th issue) are well-known to the Secretary and officials, and if those parties will not deal with it, it is to be hoped that the Welsh Cage Bird Club will make inquiries, as both parties concerned are members of that club.—J. W. (Cardiff.)

SIR,—Having read several letters under the above heading I think the following will take some "whacking." A well-known member of the Cardiff Society called on a fellow member at Penarth (March, 1907), and after looking over his stock and picking out his best hens, he suggested that the cock mated to this hen was of no use, and said if the owner would only lend him this hen he would send a suitable hen in the morning. He took the hen away with him, and promised to send another hen the following day. But up to the present time (March, 1908), he has not seen the promised hen, or returned the hen he took away, although he bred some good birds from her. If the fancier would only sue this member in the county court we would have less frauds, and it would expose them, so that other fanciers would be on their guards against such practices.

C.Y. (PENARTH.

WHERE DOES THE COLOUR COME FROM?

SIR,—Mr. Metcalfe, in last week's letter, says: "With reference to Mr. Thompson's Buff, as I happened to be at the show when this bird was bought, if 'Past Novice' says this bird was bred frm Cinnamons, I think there is a serious mistake somewhere, because Mr. Thompson and I were given to understand it was bred from pure Norwich. Maybe 'Past Novice' is the breeder of this bird." As the breeder of this bird, permit me to say that when I sold the same to Mr. Thompson, Mr. Metcalfe was not there, nor was I asked how the bird was bred. How, then, could there be a serious mistake? Furthermore, I am not "Past Novice," as Mr. Metcalfe infers.

ROBERT JENKINS.

SIR,—You say, Mr. Metcalfe, it is news to you to hear of the best Greens possessing so much blood. I dare say it is, but I am sure it is not news to some of the old breeders in Liverpool Town, also the old breeders in the district of Liverpool. Some of the old hands don't tell all they do in the bird room —I mean the men who breed them. It would be no use me telling you who owns the bird I mentioned last week. He has won all along the line this past season. I don't suppose you could tell me how he was bred; in fact, it makes no difference, as it was the colour of the bird I meant. Colour has not won for him; type alone has done the trick. Now, you say you were at the show when Thompson's bird was bought. The bird was not bought at the show; the man that bought him knows where he was bought. He could be pure Norwich and still be full of Cinnamon blood. No serious mistake there; the other way about. I have been informed the Yellow Green hen won special for best Green at Scottish National—I suppose special for best hen. No serious mistake this. A good hen she is, every feather of her. My wish is you may breed one to beat her. I should be pleased to see you beat her. You say 95 per cent. are bred in Liverpool. I say not in Liverpool Town; Liverpool and district might be nearer the mark. I also know of a certain Green that won at one of the best shows. He was bred direct from Cinnamon blood. The reports on this bird were simply grand. Several tempting offers were made for the same bird. The men that offered to buy him did not trouble how he was bred; it was the bird they wanted, not pedigree. The bird was quite sufficient for them. You say it is funny how all these toppers find their way into Liverpool Town. Very funny; yes, and they have proved good speculations for the buyers. The breeders do know their value. I know of twelve breeders that have sold out long ago, and they had something to sell, both in quality and quantity. All were their own breeding, and they had no trouble to sell their stock. Some of the Liverpool men like them, and they know a good bird when they see one. I know where there are a few Cinnamon marked hens (Norwich, I mean) at the present time, which I don't think money would buy. Talk about type and quality and size, you see it there—something you read about, but very seldom see. These are the sort to breed Greens, or anything else in the Norwich line—mind you, when well matched; that's the secret of success. My reason for writing is purely to help the novice. If he starts on the lines I have mentioned he is all right; also the start does not cost so much. Every novice is not blessed with too much cash. Plenty of them have to save their spare cash week by week. These are the sort I mean; they want all encouragement, also showing the nearest way and the cheapest. In fact, I myself would give such a one a bird at any time to help him. My aim is to push on the Norwich Green in every way I can; not to do it harm. Now Mr. Metcalfe, I wish you a successful breeding season, and hope you breed a few toppers. Likewise, to the Liverpool and district breeders, my wish is good luck to all.

JUST PAST THE NOVICE STAGE.

PUFFINS CAPTURED IN THE FENS.

SIR,—During February two rare birds, Puffins, have been caught in the Fens within a week or ten days of each other, and not five miles apart. Whether they were driven in by the gales of late I could not say; neither could I find out if they were a pair, male and female. Both were caught alive, and taken to our local naturalist, who tried all ways to get them to take food, but they would not touch any, so at last he started to cram them. But as soon as his back was turned they would disgorge all he had given them. He did manage to keep them for four or five days before they joined the majority. He related his experience to me a few days ago, and said that he had learnt a few lessons from them and should have much liked to have reared them for his aviary. He has sent them away to be mounted. Some of your numerous readers may have been successful, and they might give their methods. I believe one was caught feeding in a Fen dyke (after some of the small fish, etc.), the other was caught nearer the town, about a mile out, in the middle of a large ploughed field, and this one had probably been shot at, as it was injured in the wing. Both were in beautiful plumage, but the latter was the more beautiful, and that is the reason they were thought to be a pair. T. H. KINCH.

Ramsey.

THE FUTURE OF THE BELGIAN CANARY.

SIR,—As an old fancier of the Belgian Canary I would not like to see the old types for this variety lost to posterity, the same as the blue Lizard, or London Fancy, as the distinctive contour of the bird is widely different from that of all other varieties of the Canary family. Its character and disposition also differ from others, it having less of the wild nervous movements of the Scotch Fancy and others. Am pleased to note your correspondent, the Secretary of the Scotch Fancy Club, taking the question of type into account in favour of the variety he represents. With the idea of preserving the characteristics of the bird of circle and not allowing it to be classed as a mongrel might the writer be allowed to suggest the obtaining of the views of some of our well-known exhibitors. Barnstaple is to be noticed as a place where there are a number of Belgian Canary fanciers. Would some of them but give their views—Edinburgh, Belfast, and other places, where fanciers of both varieties reside—with the object of giving the Hon. Secretaries of both varieties some knowledge as to what suggestions they would make, seeing that the clubs are not over strong in either members or means? Members, also, are so straggled over the country that it makes it impossible for all to meet together and discuss the question. Should members of both the varieties give their views through the valuable medium of CAGE BIRDS, the two Secretaries would be, no doubt, able and willing to make some arrangements as to what course to pursue in the future, as the birds of both varieties are so entirely distinct in contour and character that they certainly ought not to merge into one. No doubt the Yorkshire bird has benefited by a fusion with Belgian blood, but breeders of the Yorkshire seem satisfied with the distinct type they have arrived at. Why should not the Belgian and Scotch Fancy be content to keep to the straight and curved platforms? As the late Mr. Blakeston remarked, there is as much difference between them as between a poplar and a weeping willow. B.

"AVIARIES, BIRD ROOMS AND CAGES"
CAGE BIRDS' LATEST HANDBOOK
It is written by that well-known fancier, Mr. H. Norman ("Cage Birds" Artist-in-Chief) who has illustrated it with a wealth of helpful drawings. It also contains 16 lovely full-page photographic plates.
It must be on every bird-lover's book-shelf
who desires to thoroughly understand the proper Building, Fitting and Management of Aviaries, Bird-rooms and Cages.
Price 2 3, post free, bound in cloth, gilt

THE NEW SOCIETY FOR MANSFIELD.

SIR,—The proposed Cage Bird Society which is to be held at the Greyhound Hotel, Mansfield, ought to be a success. Mr. Shacklock is giving a valuable cup, to be won by a member three times before becoming his own property. Will fanciers who wish to be members of this society send in their names to Mr. Shacklock, or to myself, at 12, Herbert Street, Mansfield. Now, fanciers, rally round, and let this be one of the best societies in the Midlands.

JOSEPH SMITH.

A LINNET OF MANY PRIZES.

SIR,—Allow me a little space in your valuable paper to congratulate Mr. Brown, of Edinburgh, on his Champion Exhibition Linnet, which, according to "Thistle Pop's" letter, has only been out of the tickets half a dozen times after being exhibited on nearly sixty occasions. It is in my way of thinking, a bird that deserves great praise. The Linnet is a great favourite of mine, and I am always pleased to hear of, or see, a Champion Linnet.

FRED ALLEN.

PROPOSED OPEN CAGE BIRD SOCIETY FOR STONEHOUSE, N.B.

SIR,—A meeting of the above was held in the Public Hall on the 21st March. A goodly number of fanciers turned up. After considering the matter, Mr. John Whitelaw was elected to take the chair, which he filled in a masterly manner. After a few well-chosen remarks, the chairman called on the fanciers to elect a secretary. Mr. John Govan was elected, and he will be supported by Mr. William Melvin. The next thing was a treasurer. Mr. John Cuthbertson was then elected. The subscription for membership was fixed at 2s. 6d., members to be within an eight-mile radius. That being all the business, the meeting was closed with a hearty vote of thanks to the chairman. The next meeting is fixed for the 4th April. Fanciers desirous of becoming members are heartily requested to attend.

7, Union-street, JOHN GOVAN, Sec.
Stonehouse, N.B.

THE BORDER FANCY CLUB AND ITS JUDGES.

SIR,—I am sorry I could not find time to reply to Mr. Steel's remarks in your last issue, but now gladly express my opinion on them. He strikes the nail on the head when he states that there is no such a rule in force in any club in England. My idea is that he might have extended it to the sporting world, for, as far as I can read, it is quite unprecedented in any fancy or hobby. But I think he is wide of the mark when he states that such a rule was wanted; if he had written "imagined" he would have been more to the point. I am afraid after he has had a little more experience in the fancy he will not listen to those "fairy tales" uttered by a few double-faced story-tellers, who I am afraid have poisoned his mind, and who are sweet and fair to a judge before his face yet immediately they get him out of hearing scatter their scandalous remarks to a lot of young fanciers, who, lacking the experience needed to discriminate between the false and the true, believe the most of it. If they would only inquire into those allegations they would find them without foundation. Such men are "ruining our hobby" and poisoning the mind of our young recruits more than any "clique." Let a judge be ever so base, he cannot pass a good bird when placed before him. And as to his jocular remarks and insinuations, if he could not let your readers hear them he might have let them remain unrecorded, as he is only spreading what I have already said may be found mere imagination. On one point I am happy: none of them can with truth be thrown out at myself, as the man is not born yet who I either fear or favour. In answer to Mr. Lambie, I am acting as no mouthpiece for anyone. However, I am disappointed at many swallowing those insults thrown out at them, and calmly "sitting on the fence" to see how the wind blows. Still, that is not my point. I admire discretion and tact, but doubly so independence, and I doubt whether by allowing this to pass they are not laying themselves open to suspicion. I must remind him that I have never stated that "only a few" are able to judge, and his other remark does not bear on the point at issue—the club does not confer the qualification. Re Mr. Reid, I have no intention of ruling the club, and if my health had allowed me I would have been at the meeting and protested against this thing there. As to his remarks re mixed shows, and the Canary member not getting the judge they want, seemingly the fanciers of the other varieties, at least, are not set against those judges who have served them formerly. I do not think I need be reminded that the fancy is composed of working men, who have not money to throw away at shows where they are not successful. If he goes over some of my letters nine years ago to the various papers, he will see that I have always advocated to extend the prize-money further down the class, and give less for a first. By this method novices would get at least a little with which to clear their expenses. I am afraid, even with more judges, if those appointed know their work, things will go the same way as formerly, as sterling ability will always come out on the top.

J. PATTERSON.

HABITS OF THE CROSSBILL.

SIR,—The common Crossbill (*Loxia Curvirostra*) usually builds its nest amongst the upper branches of the Scotch fir, and feeds on the seeds which lie hidden behind the scales of its cones. These he can easily split apart by forcing his beak sideways between the scales. While doing this he has a full view of the seed underneath, with the eye on that side of his head nearest the cone, and he swiftly scoops it out with his tongue. Flocks of Crossbills visit orchards and gardens during autumn for the sake of eating the pips of apples, of which they are very fond, but the fir cone may be deemed their "staff of life" throughout the year. Though plentiful in Germany, these birds are rarely seen in this country, yet at Bournemouth and other places where firs abound they are found, from time to time, feeding in great numbers together, clinging to the trees, too busy to feel fear at the footsteps of a passer-by. If disturbed, they all join in a plaintive cry, which an ancient writer describes as "a fretful, unhappy chirl." The plumage of these birds varies according to their age, sex and time of the year. It may be greenish, reddish, or a mixture of red, green and yellow with brown, and is often brilliant, reminding one of a very small Parrot. In America, during wintry weather, the Crossbill flits fearlessly about the doors of the hunter's log hut, clinging to the wooden walls and pecking at the mud with which the logs are daubed. C. CHANDLER.

THE HYBRID CLASSES AT DUDLEY SHOW.

SIR,—May I beg a small space to reply to "Scotia," whoever he may be. He doesn't sign his name (not that I mind that because I am no respecter of persons), but he proclaims his nationality, and that's something. Now, I like anything Scotch, be it porridge or shortbread, but particularly that with a White Label. I take it from his letter, "Scotia" is another of the believers in that popular fallacy that a young bird bred from a Canary and a Finch is a "Mule." Such a bird is a Hybrid. A Mule can only be bred from an ass and a horse. He also asks: "Are the N.B.B. and M.C. suffering from delusions?" I don't think so; at least, some of them are not; but the title wouldn't sound any the worse if it were altered to N.B.B. and H.C. With regard to the other part of his letter, he is really too profound. I have spent the whole of the time from Saturday to Monday trying to make out whether he intended to be funny, serious, or sarcastic. In fact, it has given me a bad dose of dyspepsia, and left me with a fat head (although I am naturally a bit fat-headed). But what on earth rare foreigners have to do with the Hybrid classes at Dudley Show, goodness knows; I don't. "Scotia" might like to just send me down a few stamps; or perhaps he would let me have a Redpoll and a Bullfinch. Only he must be sure and pay carriage, as I am one of those extremely rare individuals, "poor but honest."

T. JOHNSON.

ROLLER CANARIES AT THE PALACE SHOW.

SIR,—In reply to the letter which Mr. Whittaker says has been sent me, I beg to state that I have not received it yet, but at the same time am quite willing to answer his questions, which really were not needed, however, because he ought to be able to understand the letters I have sent him. Question: Why did I return your money on the 10th? Answer: Because I considered that from March 4th to the 9th you had long enough time to consider the final offer that was made you. Question: Who is the mysterious member who accepted your challenge? Answer: As you have backed out of the matches, I do not consider that you are entitled to know his name, and it may interest you to know that several members were quite willing to accept your challenge. Question: Why have I taken the whole thing on my shoulders? Answer: I call this a very cool question to ask, after agreeing that I should arrange the matches for you. As for making you "turn on your words" re singing for the benefit of the funds of the club, you made the offer that you would do so, and you cannot blame me for trying to get you to keep your word. Mr. Whittaker evidently felt aggrieved at the report that appeared, and sent a challenge on a p.c., which arrived on the Saturday, saying he would give £20 to £5 for the benefit of the funds of the club, if his bird did what was reported. By Monday he evidently calmed down a bit, and sent letters to the press cancelling that offer, and in the letters he made a fresh offer. I then wrote to him saying that I would be pleased to arrange the matches for him. He replied and sent £5—£3 was for the two-bird match and £2 for the one-bird match, which he stated was his offer in the press, and on looking at his letter that appeared, this is correct. But in this letter he altered the conditions by saying that if the two-bird match was not taken up the one-bird match was off. I replied saying that I only arranged the matches on condition that the loser paid the money to the funds of the club. His reply was, each to pay half the expenses, or the loser pay the lot, but there must be a side bet of £5, as the expenses would only be a few shillings. I should like to know where the club was going to benefit? In the meantime I had been writing to the member who accepted the challenge, and who agreed with me that Mr. Whittaker was only bluffing. I then wrote to Mr. Whittaker, on March 4th. The letter was posted first thing in the morning, so that he would receive it the same day; the reply came by the last post March 9th, and was to this effect, that he decided to let the whole thing drop. Yet he wants to make out that he did not want it all his own way. Mr. Whittaker is evidently very bigoted against the Glucke birds, and will not admit that the Glucke, which has an extra tour in the song of the birds, should have points. In one of my letters to him I put the following question: If two birds sing as near equal, four tours each, the points would be equal; but if one of these birds brings an extra tour he is entitled to extra points, is he not—no matter what the tour is, Glucke, Koller, Water Roll, Water Glucke, or any other? His reply was that he was surprised at my remarks, etc., and he wound up by saying that it was not worth an answer, which is a very wobbly kind of reply to make to a straightforward question—some would say insulting. The next letter I received from him was after my last letter to the press, in which I stated that I thought he ought to apologise to the judge for inferring that he had acted dishonestly at the Palace Show. In this letter he threatens me. Perhaps I had better give that part of the letter in full. (Copy): "I can't understand why you keep digging at me in the press. I never intended you to answer any of my letters, but I must tell you straight that an apology from me is impossible, as I have done nothing wrong. What I have said are facts, and you know it as well as me. I never said anyone had acted dishonestly, neither am I going to do. I have a lot to say if this is not stopped, but I do hope I shan't need to." Of course, he has not used the word "dishonestly," but his first statement infers it, which is the general impression he meant when he wrote it. Now, Mr. Whittaker, I allow no one to intimidate me, as to what I write to the press in the cause of fair play and justice, and I fail to see that in my letters I have been digging at you. I consider that to serve your own ends you have been making a tool of me as regards the challenges you have thrown out, and events have proved that my first surmise was right—that you were only bluffing. You must not think that because you are a disappointed exhibitor, you are entitled to insult people, and then calmly climb down and try to make the public believe that you are the injured party.

Hon. Sec., B.R.C.C. J. W. NORRIS.

[One paragraph in the above letter, which had reference to Wolverhampton Show, we have been compelled to delete, as it was not only of a libellous nature, but brought in a third party who has not been concerned in this discussion; further, we cannot trace any official record of the matter referred to having been sent for publication.—EDITOR.]

Several letters unavoidably held over.

Books every Bird Keeper and Breeder must have.

Canary Breeding for Beginners - - Post free, 7d.

By Claude St. John.

A practical, up-to-date guide to the cult of Canary breeding, designed specially for the use of the beginner in the hobby. It contains many helpful illustrations, and deals very fully, and in an easily-understandable manner, with the choice, sexing and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the details and difficulties likely to confront the breeder.

House's Canary Manual - - - - Post free, 1/2

This is a thorough and practical guide to the general management and breeding of Canaries, written by a well-known expert and judge. It contains chapters dealing fully with the breeding, etc., of every member of the Canary family, and an illustration of each bird, by the master Canary artist, Mr. H. Norman, reproduced in the finest art style. There are also exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge approached by no other book of its kind at the price.

Cage Birds 1908 Annual - - - - post free, 7d.

The Standard Guide to the Cage Bird Hobby is a title bestowed upon the ANNUAL years ago. And the 1908 edition merits it more than any previous volume. Revised and brought up-to-date from cover to cover, with a lovely coloured plate and many full-page art illustrations, and crammed with valuable articles and unique and helpful features, it is the finest value for money ever offered lovers of birds. Canary, British, Hybrid and Foreign bird enthusiasts alike will find it a Complete Guide to the Fancy.

The Stock Book (Our Invaluable "Breeding Room Register.") - - - post free. 7d.

A well-known fancier has said of it:—"It makes bird-breeding easy." This book is one no breeder of birds can possibly afford to be without. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred—keep account of their strong and weak points. It contains both Pedigree, Breeding, Young Bird and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

Or the 4 for Two-and-Sixpence Post Free.

Send the Half-Crown at once to
The Manager, "Cage Birds." 154, Fleet Street, London, E.C.

The Novices Notebook.

This page will consist of topical hints, addressed chiefly to beginners, concerning every branch of the hobby of bird-keeping, and the notes will be contributed from time to time by various leading experts.

(Continued from page 306).

Like Breeds Like.

Although this phrase has become an adage, it is by no means universally supported. But it is nevertheless a hard fact that the fancier of to-day is more inclined to adhere to its principles than was formerly the case. This, it is not improbable, is chiefly due to the fact that in every one of the popular varieties of to-day there exists more material for the fancier to draw upon when mating his stock than was the case years ago when the varieties were in a more transitionary state. Then the scientific breeder who knew the pedigree of his stock and what it was capable of doing would frequently prefer to mate up a specimen which, externally, appeared less perfect in type than others that were discarded. But in all such cases there was sure to be blood in the chosen bird that was of more valuable service to the breeder than existed in its more typical competitor, and as often as anything the breeder knew to a nicety what aptitude the bird possessed for transmitting certain points to its progeny.

To-day, however, the type is more securely fixed in these varieties, and by reason of their popularity there is no lack of good all-round material to supply all demands, so that the fancier who can afford to secure ready-made material to produce the highest class of birds can generally obtain it. Therefore, it is no uncommon thing to come across breeders now who pin their faith to the principle that like breeds like, and who prefer to mate good, all-round exhibition birds, or birds fit to win in any show, rather than comparatively imperfect specimens which were properly bred to throw a still better type of birds which were formerly considered of more service for stock than the winners themselves. It is simply that as the type becomes more firmly fixed and popularity is responsible for what one might call a redundancy of material, the stock birds naturally advance in type and merge into the perfect show specimens without any marked line of distinction between them.

The Better Way.

All this may appear on first sight rather beside the question, but a careful study of these remarks will serve to show the intimate connection they have with such a case as the query mentioned in the last note. For a novice in particular it is infinitely better to obtain a stock of good, all-round, typical birds to begin with than to attempt to dabble and experiment in such ways as mating an inferior bird on the strength of its parents, or one of them, being a prize-winner.

It is no very uncommon thing for a good bird, capable of winning prizes, to be bred from mediocre stock by a chance lucky hit which, in a sense, is a pure and simple accident of circumstance. It must be apparent to everyone that such a chance bird is a very serious risk in the plan of breeding good stock. It cannot by any means be looked upon as a reliable bird until it has been tested, and is proved by the results obtained from it in the breeding cage.

The Other Extreme.

But whilst we would strongly discourage the use of faulty stock birds, and risky specimens whose powers are unknown until proved by actual experiment, we would also counsel the novice not to pick up the best, all-round specimens haphazard, without regard to anything save that the birds are of good, general, typical qualities. In this case it must invariably mean the expenditure of a fairly large amount of capital for a few excellent birds in themselves, but of which the nature of the produce is eminently uncertain.

If they should happen to be of different strains which are, so to speak, antagonistic to each other, and will not blend together, which is exceedingly likely to be the case, the breeding results will probably be no better than would be obtained from a comparatively cheap and common type of bird. True, there is the chance of picking up a pair or two of birds that blend together, but these lucky chances occur only to the few when fickle fortune happens to be prodigal with favours; and when they do occur the probability is that the fortunate ones have accidentally fallen upon birds of the same strain, or of strains closely related to each other.

It would be infinitely better for the inexperienced hand to make either a point of getting birds of good, all-round type and quality from the same strain, or to place himself in the hands of a well-known breeder-exhibitor, and be guided by his judgment in selecting a pair or two of birds to give him a good start. If he has to limit the number of his purchases to keep within the powers of his pocket in this way he will be far better off in the end; but it is doubtful whether this plan of starting would prove as costly after all as the method of picking up winners haphazard.

Egg-eating and Nesting Notes.

Although not particularly common, the hen who has so far departed from feminine morality as to break and devour her own eggs is sure to be encountered from time to time. And when she does turn up, she is, without exception, about the most hopeless and incorrigible pest the fancier has to deal with. If she should also happen to be a valuable specimen in the breeding cage, her wretched habit is all the more annoying and trying to the patience of the long-suffering fancier.

In any case time and trouble spent in attempting to cure the habit is, we believe, almost, if not quite, labour spent in vain, and therefore one's time and energy may be much better employed in devising plans to save the eggs for some more self-respecting nurse to hatch and rear. With a very little skill and ingenuity this is easily accomplished quite satisfactorily and efficiently by the use of a specially-arranged nest-box or pan as is hereafter described.

The Causes of Egg-eating.

But when a hen appears with this vicious habit, or rather when the eggs begin to disappear in such a way as to lead to the suspicion that they are being eaten, it is best to look around quietly a little and endeavour to find out the real cause of the disappearance. One is apt to jump to the conclusion that it is a vicious habit on the part of the hen, when, indeed, the hen may be perfectly innocent of any such evil intent or malice concerning her future progeny. The cock is rarely suspected of having a hand—a beak, I should have said—in the matter, and yet I imagine he is the guilty party just as often as his partner is. When it occurs with a Mule pair, consisting of a Finch and a hen Canary, I should suspect the cock Finch to be at the root of the mischief in treble the number of cases as his mate figured as the originator, or even more than that.

Then in the great majority of cases which arise I believe it may be traced to some accident to the eggs which causes more or less serious fracture, and allows the contents to escape, which naturally attract the birds' notice; they first pick about the damaged egg inquisitively, taste the contents, find it good and a dainty variant of their usually unvarying diet, and thus acquire a taste for eggs in a natural state, and become egg-eaters. Having acquired the taste they are not long discovering a short way to gratify it whenever eggs either whole or damaged come in their way.

Thus it will be seen that many unsuspected causes may indirectly be responsible for the annoying practice. Among the most frequent are unsuitable nests or nesting material, improper boxes or pans, and excessively long over-grown claws in the case of Canaries, to which may be added as frequent indirect causes in the case of pairs for breeding Hybrids, laying the eggs about the floor of the cage or dropping them from perches. In either case the egg usually meets with irreparable damage, and is beyond all hopes of redemption in any case, whether it leads to egg-eating or not, unless the Hybrid breeder has had the forethought to cover his cage bottom at least an inch deep with sawdust or oat husk, and place the perches low down in the cage when they were prepared for mating the birds.

Overgrown claws should never be found in a breeding couple, and would not occur if the birds were prepared for mating and finally trimmed when being put together as was described in detail on this page at the proper time.

Examine Nesting Materials.

Nesting material should always be carefully examined when being given. Many of the penny nest bags usually sold, which contain a fair proportion of moss in addition to cowhair, will be found to contain tough, strongly-grown, little branchlets of moss with spiky ends on them, which form a really strong and dangerous thorn should the piece of moss be so built into the nest that this spike gradually finds its way through the lining and protrudes inside the nest after it has been finished some time.

In such a case there is a constant danger of the eggs being pierced every time the hen leaves the nest or returns to it. Prevention is the only rational remedy; hence the advice to carefully examine the bags when given and remove any such dangerous branchlets of moss as these.

Improper nests consist of badly-shaped ones, or such as have not enough material used in their construction. This, again, is the cause of the eggs getting damaged, which is quite easily preventable. One should make a point of examining every nest built by the birds themselves before they are set to incubate. Appearances are often deceptive, and what may look like a very trim and cosy nest in a square nest box as it hangs in the cage will, when brought out and looked into, appear a very different structure.

Remedying the Shape.

Perhaps there are splendid sides and a well-constructed cup, but it has also perhaps been hollowed out so vigorously that the nest bottom is conspicuous by its absence, so that the eggs are laid direct on the wooden bottom of the box. Or the box may be simply packed solid with material, except for a little depression in one corner, where again the eggs as soon as laid, and all the time during incubation, must be in direct contact with the wooden sides of the box. This, of course, is all remedied by making a new and properly shaped nest when finally putting the birds to sit. Do not attempt to do it at an earlier stage of the nesting operations, or the probability is that the hen will immediately set to work to re-convert your own dainty nest into another one after her own slovenly heart—or should it be art?—and you will have had all your trouble for nothing.

By using the modern round earthenware nest pans most of these structural failings are rendered practically impossible, and if they are well lined with felt or swansdown linings accidents to the eggs from coming into contact with the hard surface of the pan are equally out of the question.

Nest Pan for Egg-eaters.

This can be made either with an ordinary earthenware nest-pan or the square Norwich nest-box. The pan is to be preferred in some respects, but even the tyro at wood-working will probably make a more decent job out of the wood nest-box to begin with.

First of all make a little wood-shaving box with a cover to slide on and off, about two inches square and two inches deep. An ordinary chip matchbox may be taken as a pattern of what is required except that the box you want will be different in size and shape. The above measurement will be large enough for all purposes, and the shape will not very materially disfigure the appearance of the cages; but, of course, the size may be made to suit the boxes or pans to which they are to be attached. If any difficulty arises in making these boxes, or in getting the necessary wood-shavings, which must be thick ones, about the same as one sees in a matchbox, it is quite possible to make a very good substitute out of thin and easily folded cardboard.

(To be continued.)

The Best Book ON British Birds.

The issue of an entirely new and really magnificent work on the Birds of Great Britain *(order Passeres)*, of which the text has been especially written by Dr. Butler, and the full-page plates of Birds and figures of eggs have been lithographed in natural colours from coloured drawings by H. Gronwald and F. W. Frohawk, M.B.O.U., F.E.S., is an event that will waken interest not only among ornithologists, but amongst all earnest students of Natural History in the Kingdom.

The author, Dr. A. G. Butler, Ph.D., F.L.S., F.Z.S., M.B.O.U., late of the British Museum (Natural History), is well known to ornithologists as the author of "Foreign Finches in Captivity," "A Handbook of British Oology," &c., &c. The plates are drawn expressly for this work by two of the first ornithological artists of the day, who have intimate and life-long experience of British birds in their native haunts, and have access to the vast resources of the British Museum, as well as having the finest collections of living birds in the country at their command. There are considerably over a hundred full-page plates of birds, and two hundred and fifty-five figures of eggs. Perhaps it is, after all, the supreme

Excellence of the Coloured Plates

that will serve to distinguish this beautiful edition from all other ornithological works. Every species of British bird must be figured in colours if a work is to be complete. Reproduced in Nature's colours by chromo-lithography, these plates are so exquisitely and accurately printed that it is almost impossible, even for an expert to detect any difference between them and the original water colours. The work conttains an exact drawing of each Passerine bird included as British: the greater number are life-size, but the scale is given when the birds are drawn smaller than life. The egg-plates are beautifully printed in Nature's colours, and form one of the most complete series of Passerine egg-plates ever issued, giving variations in the form, markings, and colouration of the same species; a figure of the egg of every Passerine bird breeding in the British Isles is included.

For all Earnest Ornithologists.

Enough has been said to show that this fine edition is a necessity in the library of every serious ornithologist. Its outward presentment is admirable in every way. The type is new, and cast especially for this edition. The figures of birds are printed on the finest prepared plate paper: the paper on which the eggs are printed has been manufactured expressly for this work.

This is an opportunity to possess the most recent and up-to-date work on Ornithology (and the only one treating of and illustrating the entire range of Passerine bird life with their nests and eggs in Nature's colours) which should not be missed by ornithologists, the trustees of Public and Private Libraries, scholars in the great Public Schools, and by the reading public throughout the British Isles.

Viscount Llandaff writes:

"It is far and away the best popular work on the subject, and I shall certainly make it my business to induce all my friends to subscribe."

The "Field":

"... Mr. Butler has produced a very beautiful work which will appeal to all lovers of bird life, and especially to those who want accurate portraits of the feathered visitors to their gardens and homesteads."

FREE INQUIRY FORM.

To the CAXTON PUBLISHING CO.,
Clun House, Surrey Street, London, W.C.

Please send me free of charge, and without any obligation on my part, all particulars relating to Birds of Great Britain and Ireland *(order Passeres)*, free specimen of the Illustrations, and particulars of your plan by means of which the two volumes will be delivered as published for a payment of 4s., the balance being paid by small monthly payments of 5s

CAGE BIRDS CHARTS.

No. 2: Why some Exhibition Yorkshires Fail to Win Prizes.

Notes on the Drawing on Page 333.

It has been said that the Yorkshire candidate for high exhibition honours should be able to pass through a lady's wedding ring. Why a wedding ring in preference to any other I know not, and further, I should like to say it would have to be rather a plump finger that could wear a ring large enough for even a 6¾ up-to-date Yorkshire Union standard bird to pass through. The wedding ring ideal is only an ideal after all; still it is one which is worth keeping in front of the Fancy, because it will do far more to prevent the Yorkshire becoming a coarse ungainly bird than will any length regulation which may be enforced, good though it is.

Correct in Length and All.

Mr. Norman, in the splendid educational plate which accompanies this article, has given us a portrait of a well-known winner which measures 6½ inches from the top of its head to the end of its tail. A glance at this is sufficient to convince the most confirmed advocate of the "good big 'uns" that here is the bird he wants. This bird is undoubtedly a big one; in fact big enough to satisfy the most inordinate appetite for length and size. If we allow this bird ¼in. for his beak, we at once get a standard 6¾in. bird—full proof that those who argue a 6¾in. bird is a big bird have right upon their side. This "well known winner," as portrayed by Mr. Norman, is, indeed, a most beautiful example of the bird of grace and style. Its erect carriage, its length of leg, its well braced wings and tail, its neat beak, fine head, and general symmetrical outline all stamp it as being of the 22 carat mint, and a bird of type, quality, and style. Its beautiful proportions convey a true sense of what is needed in the exhibition Yorkshire, and the breeder taking this bird, even though it is not put forth as an ideal, as his guide in forming a stud of birds would be certain to keep on the right side of the hedge.

The Very Important Head.

The head is a most important point in any animal or bird intended for exhibition, and Mr. Norman has shown himself to be in touch with the spirit of the times when he gives the most prominent place on the plate to a flat head. This is a great fault, and one which during the last two or three seasons has made considerable encroachments upon the Yorkshire Fancy. Doubtless it has crept in by reason of the desire for a fine head. Still, it is a failing that needs to be kept away from the stud of any breeder who desires to attain the highest honours upon the show bench, as it undoubtedly detracts from the beautiful finish which a good Yorkie should possess.

Introduces "Breed."

Keeping to the left hand of the picture we have a bird which is described as hollow-necked, and too angular at breast. It is all this, and more besides, for it has another fault greater than either of these, and that is, too much substance of skull, especially at the back. It must be remembered that it is impossible for Mr. Norman to show all the faults of a Yorkshire in one single plate. The hollowness of the neck comes from the introduction of too much Belgian blood into a strain. Birds which are hollow in neck are usually very racy and stylish, and show what is called in Yorkshire "a bit of breed," and it is not considered so great a fault in the North as it is in the South, where many of our breeders and judges will not look at a bird unless it possess a well-filled neck. This desire for a well-filled neck sometimes leads them to select birds with quite an opposite failing, and that is a short, thick neck. The angular breast is a very bad fault, because not only does it interfere with the clean run over the breast which a Yorkshire should possess, but it nine times out of ten is the cause of a frilled breast.

Faults of Body and Feather.

Next we have the barrel, or boaty-shaped body. This bird possesses a lot of faults: its head and back are good, but its body is too short and chubby; it is short in the waist, and also short on legs—faults which come generally in breeding from hens which are too stout and short.

"Too stoutly-built, shows frill," says Mr. Norman. This bird is also much too short in tail, it has a good pair of legs, but evidently does not know how to use them. Not a desirable bird for the breeding-room at all.

A good, straight, well-filled back is a desirable feature in an exhibition Yorkshire; but birds which contain a lot of Belgian blood often show a slight hollowness or guttering down the back. Speaking generally, however, such birds are of high merit in other respects, as they are very racy and full of style and swagger, whilst coming from or throwing back to the Belgian blood they are usually fine and short in feather. This bird, as depicted, is a very useful example of the Yorkie, and would, despite its slightly hollow back be able to pick up a few crumbs at the majority of shows.

The Importance of Training.

The picture of this bird, one of the most instructive on the plate, shows us the raw, uncultivated recruit before he has been taken in hand by the drill sergeant. He stands awkwardly, and slouches about, hiding his good points, and exaggerating his bad ones. This is the kind of bird often picked up by an old hand cheap from some young struggling amateur, and which when from a week or two's careful tuition in the art of deportment comes out and surprises people by winning first and special nearly every time it is shown. When this happens, the ignorant ones say, "It could not win for Mr. Novice, but directly he sold it to Mr. Professional it carries all before it. This cannot be fair judging." The bird may be the same, the judge the same, but it is not the same exhibitor, and it is the exhibitor who makes the bird, or mars it. The best Yorkshire ever bred would not and could not win prizes if shown without training.

Crossed Wings.

"Rattling good bird, but crosses his wings" is an oft-repeated show-room expression, and many of our readers will doubtless voice it as they cast their eyes over the slim, graceful specimen, of which our artist laconically says, "crosses wings." The failing is a bad one, and is possessed by many Yorkshires, especially those which are extra long in flights. It sometimes arises from weakness in a particular individual, at other times it is inherited, but no matter how it comes, it is a nasty fault and one which should be avoided. A straight tip to prevent the crossing of wing tips is—Never breed with a hen which shows this objectionable feature.

"Coarse head"; I should think so—and coarse in feather too. An out and out rotter. Bad shaped beak and head, not slim enough in body, very harsh and coarse in feather, and not at all good in carriage, useless either as a stock bird, or a show; in fact, the worst example on the plate, and one which at all costs should be avoided. Such a bird is no use at all except as a songster, and the quicker the breeder shunts such as this, the smaller will be his food bill.

All readers of CAGE BIRDS are indebted to Mr. Norman for this most valuable and instructive chart as to why some Yorkshires do not win. Its value is great, and from a careful examination of it the veriest tyro of the Fancy will be able to grasp the why and the wherefore of the non-success of any birds which he may have in his possession.

Scale of Exhibition Points.

(As drawn up by The Yorkshire Canary Club.)

CLEAR BIRDS.

SHAPE—Head, small and round: skull, narrow..	5
Neck, moderately long, straight	5
Shoulders, narrow, rounded, and well filled..	5
Back, long, straight, well filled: wings, long and evenly carried	5
Breast, round and smooth, the body long and gradually tapering to a neat waist..	5
Legs, long, without being stilty, thighs well clothed	5
Tail, long, straight, and closely folded ..	5
SIZE—Length, 6¾ inches, with corresponding symmetrical proportions	10
POSITION—Attitude erect, with fearless carriage, head, neck, back, and tail in straight line	20
FEATHER—Short, close, tight, compact body feather, and close carriage of wings and tail	20
COLOUR—Pure body colour; beak, legs, and feet clear	5
CONDITION—Health, cleanliness and sound feather	10
Total	100

An important announcement in connection with CAGE BIRDS' CHARTS will be found on page 324 this week.

"Cock Robin and Co., Limited."

An Interesting Lecture by F. B. Kirkman, B.A., before the Highgate, Hampstead and District C.B.S.

An excellent lecture, illustrated by the aid of splendid lantern slides, was given by F. B. Kirkman, Esq., B.A., before the members of the Highgate, Hampstead, and District Cage Bird Society, at their headquarters, Spencer Hall, N.W., on January 20th. Mr. Geo. Gardner presided, and there was a numerous attendance, many ladies being amongst the audience.

Mr. Kirkman began by expressing the opinion that there was a vast disparity between what we knew about the commonest of our wild birds and what we did not know. He then proceeded, after a few other initial observations, to state that the Robin (an excellent view of which was thrown upon the screen, as was the case with other birds during the lecture) had a curious habit of feeding which was quite different from that of the large majority of birds. Starlings feed in flocks; Ravens in pairs; but Robins, in the winter and in the autumn, feed absolutely alone.

A Private Estate.

When the breeding season was over, the Robins divided the country into "estates," each Robin taking its own particular corner. It was then that the trouble began, and the feathers commenced to fly. Each Robin defended his "estate" from marauders of its own species. There was one Robin to each "estate," and as a result the strongest Robin for the largest stretch, and if one Robin trespassed into another Robin's "country" he was quickly chased out again. Mr. Kirkman had tested this point for himself, and found it true, and the slides gave the audience a clear view of the way in which these "estates" were cut up.

All the Robins, the lecturer said, struggle for the ground, as on it they find the food provided for the winter. Some of the weaker of the Robins get a small "estate," and as a result a limited scope for food supply; often they trespassed on the stronger Robin's "land" and got killed as a result. How, he was led to inquire, did this strange arrangement come about?

The young Robin had not the red breast of the adult bird, but if they pulled out breast feathers from a young bird they would find that, a little way down, it was red. This red came to the surface by the continuous wearing away of the tips of the feathers, thus leaving a red breast. The Robin belonged to the same family, amongst others, as the Nightingale, Thrush, Wheatear, and Stonechat.

Mr. Kirkman, in alluding to a young Blackbird shown on the screen, said he found it in a field. He heard it, and went to look for it. For some time he could not find it, but eventually discovered it was several yards away. He thus concluded that it was possessed of certain ventriloquial powers calculated to deceive as to its exact whereabouts.

Willow Wren and Other Birds.

Another interesting item in the lecture was a description of the Willow Wren feeding her young. The Willow Wren, said the lecturer, is a bird that comes to us in the summer. It is of a colour not easy to see as it creeps about like a mouse; but once its note had been heard they would always be able to distinguish it. He once watched a pair feeding their young, and the hen seemed to take no notice of him, though he stood only a few yards away; but the cock bird would not approach for some time. He had a grub in his mouth, and did not come nearer than two or three yards distance. At last he gave up the task, swallowed the grub himself, and went to look for another.

Mr. Kirkman then alluded to the enormous mortality amongst young birds. This he attributed largely to ignorance on the part of the young in trying to leave the nest too soon. He had seen a young bird fly straight into a pond! Beautiful slides showing young Thrushes, also young Garden Warblers in the nests followed, and then came a masterly picture of the hen Missel Thrush feeding her brood. The wonderful care exercised by the mother bird in feeding her young, and her patience, were commented upon by the lecturer, who emphasized the care with which she made certain that the food went down the throat of the young bird.

They Soon Grow Up.

The extraordinary rapidity of growth of young birds in the nest was alluded to. For instance, young Blackbirds when first hatched would not measure more than two inches; in two weeks' time they measured six inches, thus trebling their bulk. This he attributed to the enormous quantity of food which the young absorbed, as they could stand being gorged without "turning a hair." A Blackbird sitting quietly in her nest, a young Flycatcher, the Willow Wren, and the Stonechat's nests and eggs were each shown, followed by a Blackbird's nest, on which the lecturer asked the question—Which bird builds the nest, the cock or the hen? As a general rule, he concluded, the hen did so, but occasionally the cock took a hand.

How?

Robins were not particular where they built their nests, said the lecturer, who then raised a most important point—How does a bird learn to build its nest? The theory that held the field up to the present was that birds built their nests by instinct. It was said that if you hatched a Greenfinch's egg under a hen Canary that the Greenfinch, if a hen, the first time it built would build the nest of a Greenfinch.

Among the other slides shown was one which brought home to all the distressing circumstances under which Aigrettes were obtained, and the mortality and suffering inflicted upon the young birds who were left to starve to death on account of the slaughter of the old birds. The lecturer appealed to ladies to refuse to buy these feathers.

The Chairman moved a vote of thanks to the lecturer, saying that it was of intense interest and full of instruction, and the Society was fortunate in having been honoured by Mr. Kirkman at its initial meeting. Mr. Reynolds (Secretary) seconded, and Mr. Kirkman, in reply, invited an expression of opinion as to the question of nest building raised in his lecture.—The Chairman said he did not think that fanciers generally had gone into it, as although Greenfinches were hatched under hen Canaries for muling purposes, it was usually the cock bird that was utilised. Perhaps some Canary breeder might throw light upon the question.

Thanks were accorded to all who had assisted in making the gathering a success; also to the Chairman, and unanimously carried.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given each week for the best three anecdotes about birds written on postcards. Competitors must be children under sixteen years of age, and must state from where stories are taken.

Two stars indicate the Winning Contribution; one star the runners up.

*No Doubt About It!

A Hindoo, who possessed a Parrot, taught it to say nothing else but, "There is no douht about that." One day the man took the bird to a sale. An hour or two later a man went up to the bird and said, "Are you worth 100 rupees?" The Parrot replied, "There is no doubt about that." The man bought the bird, took it home with him, and then said to it, "What a fool I was to buy you?" The Parrot replied, "There is no douht about that!"—Sent by W. Alderson, age 13, Heslington Lane, Fulford, near York.

**Objected to being Plucked.

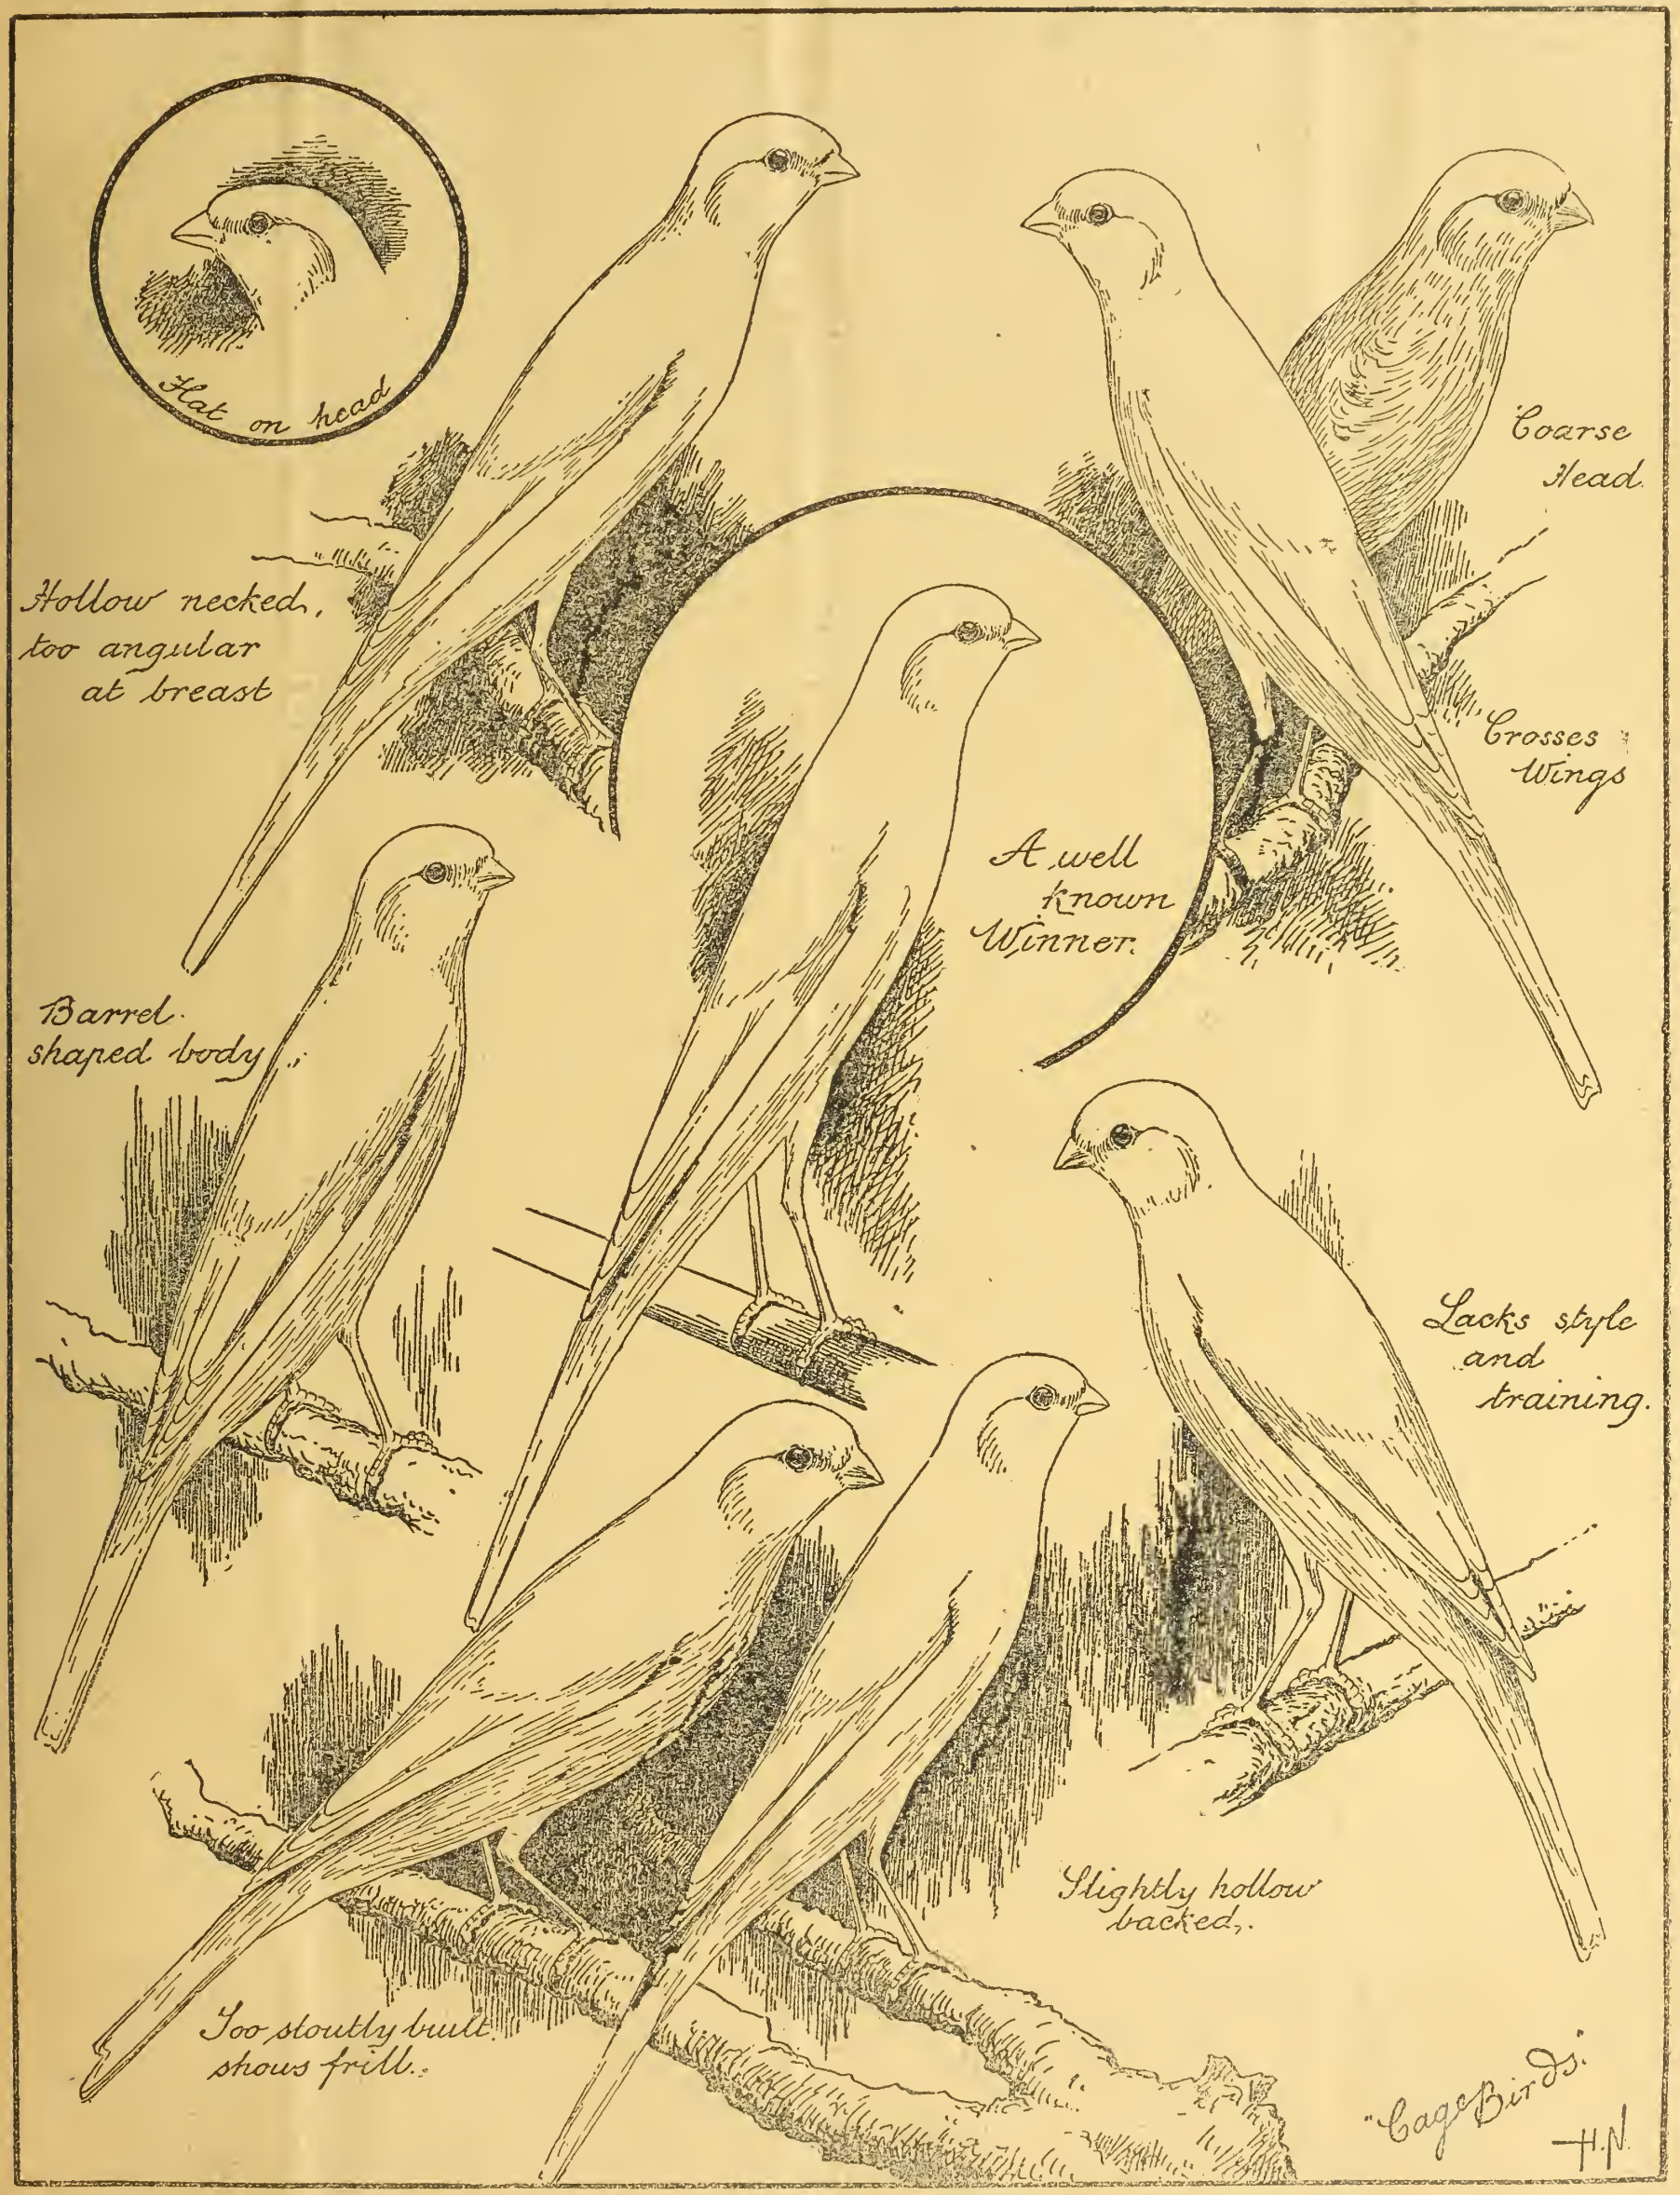
Jackdaws live to a great age; some people say they thrive for 50 years. I once had a Jackdaw myself, but it died when it was about two years old. It was kept in the same yard as a large Turkey cock. The little bird did not like the Turkey, and being a brave little Jackdaw it pulled some of the Turkey's feathers out, and of course the Turkey did not like this. As soon as it got a chance the turkey with its strong beak killed my poor pet.—Sent by Walter Burgess (age 14), 38, Fieldhead Street, Listerhills Road, Bradford.

*A Summer Visitor.

The Blackcap Warbler is a summer visitor to England, and is a very familiar song-bird, whose voice is considered by some to be second only to the Nightingale. It arrives about the first week in April, and leaves again about the end of September. When it first arrives its chief food is the early ripened berries of the ivy, and, where these are, there the Blackcaps are first to be heard singing. By the time the ivy-berries are over the larvæ of small moths become plentiful, and these form the chief food of the Blackcap until the strawberries and cherries become ripe. The male Blackcap is nearly 6 inches in length, the upper part of the head is black, the back of the neck ashy-brown, and the body more or less grey; the bill is brown, and the eyes hazel. The female is of larger size, and the crown of the head is of a snuff-brown or rust colour. Gardens, orchards, and thick hedges are the favourite haunts of the Blackcap, where in some low bush it usually builds its nest, depositing therein from four to six eggs of a greyish-brown colour.—Sent by M. Palfreyman, age 12, Cook's Cross, South Molton, N. Devon.

Last week Master Weighell, of Bedlington, should have had a star against his contribution, as winner of a prize.

The most delightful and appropriate Postcards for Bird Lovers on the Market are those published by "Cage Birds."



CAGE BIRDS CHARTS.

No. 2: WHY SOME EXHIBITION YORKSHIRES FAIL TO WIN PRIZES.

(See Notes on Drawing on page 332.)

Some Notes on the Roller Canary.

By J. W. NORRIS.

A Lecture delivered before the Members and Friends of the City and Suburban A.C.B. on March 23.

In giving you these few notes on the Roller Canary, I must confess I am very dubious about making them interesting to you, as it must be a unique experience for you to listen to something about a bird you are not interested in.

The Song of the Roller.

A more fascinating hobby it would be difficult to find. Apart altogether from the breeding of the birds as a hobby, there is an attraction about it that appeals to the Roller Canary breeder to try and produce song. One never knows what kind of song will be produced, as to a certain extent song production has to rely on nature. As with the human voice, one cannot with any amount of training turn a tenor singer into a bass singer, so with the training of a Roller Canary. One cannot turn a high tenor Roller into the deep bass Roller which we all so much admire. It is really wonderful, when we come to think of it, that such a small bird can be bred and trained to produce such wonderful deep rolls.

As regards the song of the present day contest singer we find, as a rule, that these birds have only five or six rolls—hollow roll, schockel, bell roll, bass roll, flute notes and glucks—which is very nice, but at the same time somewhat monotonous. One hears this remark passed at the different shows, and it behoves the Roller fancier of to-day to breed more tours into the song of their birds By doing so they will not only make the bird more atractive to the general public, but score more points with their birds, and so stand a better chance of being prize-winners.

There is not the least doubt that the craze for purity of song, which came into existence a few years ago in Germany, has caused the birds at the present time to have so few tours; thereby also some beautiful tours have disappeared from the birds' song. But I am pleased to say that the Germans have seen the great error they made and are trying to rectify it. At one of the late big shows held at Berlin one of the three judges said in his report, re the first prize-winner (I might mention that the birds were shown in teams of six), "the song of these birds was stamped with an interesting and remarkable uniformity, and in regard to their music, as compared with birds of the Seifert strain, I can only express it by instancing the difference between the music of Wagner and that of Beethoven. The Seifert birds distinguished themselves by their soft and sonorous hollow passages, and the exhibitor's birds by their touching gurgling and bubbling song passages. Although these birds betrayed their descent from birds of the Seifert strain, we recognized in them an entirely new style of song, which in its perfection not only stands on a par with the Seifert bird, but even surpasses him, in that it contains, in addition to the excellent passages of theSiefert bird, gurgling, kollerlike, and gluck-like water rolls in quite extraordinary depth. One was at a loss which more to admire, the wonderful deep, gluck-sounding, bubbling song passages, or the distinguished repose, softness and ease with which these birds apparently rendered their deep tours."

We therefore see by this report that these beautiful tours can be bred into the song of the bird, and if our friends the Germans can do it, I see no reason why we in England, after a time, should not be able to do the same. At least I hope that the fancier here will have a good try.

Germany Sets the Example.

The Roller, as I daresay you all know, is entirely German, having been cultivated by them for the past 300 years, and they are more keen on the song of the bird than ever. No other variety is the same to the German as the Edel Roller, which is not to be wondered at when we consider to what perfection they have brought the song of the bird at the present time. In Germany every little town has its Roller Society, the same as we have in this country for the ordinary varieties. Every member of the society, too, is a Roller breeder, so that it is not to be wondered at that there are an enormous numbers of Rollers imported into this country every year, which, to my mind, could be bred here and with very great advantage to the working men of this country.

About the first German of note was William Trute, a simple minor of St. Andreasberg. This fancier, by careful breeding, training, etc., was able to produce in his birds some 20 odd tours or changes in his birds, which so became the rage, and there was a great rush for his birds. Breedors, however, found they could not breed the same kind of song without having a lot of faulty tours; hence the cry for purity of song. It has been said that Trute had a secret way of breeding and training his birds, and that when he died the secret died with him. Whether this is right I am not in a position to say; but one thing is certain, that the craze for purity was the cause of more than half of the tours disappearing.

The next fancier to appear and set a fresh craze was Henrich Siefert, a man whose birds were the admiration of all who heard them, but whose reign was cut short by having to leave the country. At the present time nearly every Roller is called Siefert. As Shakespeare has said, What's in a name? This very aptly applies to the man Siefert. His name is known wherever the Roller is known. Everybody calls his birds Sciferts. Everybody buying birds wants "Sieferts," and every advertiser advertises "Sieferts" from 4s. 6d. upwards. But they are not Sieferts; the name is misleading. Not one bird in a 1,000 is a pure Siefert, because the Siefert bird has been bred into other strains so much that there is very little left of the song of the original, and thousands of so-called "Siefert" birds are not "Sieferts" at all, but simply called that for trade purposes.

I remember a few years back that a letter came from Mrs. Siefert, and in that she stated that not one in a thousand German breeders ever had a feather from the Siefert room. That being the case, it is remarkable where all the "Sicfert" birds have come from.

Now, it is a fact that before Siefert brought his birds to perfection, that he used to kill each year all the hens he was not going to use, so that nobody could say that he had Siefert's strain. After he had got his birds to that perfection which made his name famous, I believe I am right in stating that it was next door to impossibility to get a pair of birds from him. He would sell them singly, so that breeders could only have half a strain.

By this you see that there can be very few pure Sieferts about. Also the present day song of the birds proves that they are not Siefert. It is very seldom you hear a bird on the show bench with a good deep bass roll.

The Breeding of Rollers.

As regards the breeding of Rollers, they are very easy to breed. At one time of day it was considered that you could not breed Roller Canaries here unless you used heat, owing to the birds being so delicate. There is not the least doubt that the ordinary Roller Canaries that come over here on sticks are delicate and that a great proportion of them are hens, which are sold as cocks—a fact which many have found out to their sorrow. One of the reasons is that the birds are delicate through excessive inbreeding. Also they are bred in too much heated rooms.

The Germans who breed for the English market start very early; consequently the system of breeding is to put so many cocks and about seven times the number of hens into a room altogether. The nest boxes are placed all over the room, the seed and water being placed on the ground. All the breeder does each day is to give fresh water and throw fresh seed down on the floor—a very easy way of breeding a number of birds.

As regards the inbreeding, the mischief of it is the breeder does not know what cock bird the young ones are from, so that the next year the mother and daughter, father and son, are all mixed up together, and the year after that the inbreeding is worse. This refers mostly to Hartz Mountain Rollers, where the poorer class breed these birds not for the song, but simply for quantity.

I have seen such a room as I have described in this country, and I must say that the general effect was very pretty. When the breeding season was in full swing the nest boxes were dotted all over the room, the birds flying about, some building their nests, some feeding the youngsters in one nest or flying to another nest and feeding others; two hens fighting for a particular nest; when one had got some nesting material in, the other would put it out.

I am not able to say how they got on at the finish, but I noticed two hens in one nest—one sitting on the other. The breeder told me that there was a nest full of eggs, but all clear. What good eggs he had he used to divide between them, and he used to have clear eggs by the hundreds. With the better class bird the usual way of breeding is with one cock and five or six hens. Some put more, some less, in a large open wire cage. I daresay a good many of you have seen them at the Palace show. The nest boxes hang on the outside—a convenient way of breeding. But it seems to me that there must be a lot of clear eggs. Unless there was heat in the room it must be cold for the birds. Personally, I prefer the wood box cage, each hen having a cage to herself. I also run one cock to two hens, and the percentage of clear eggs is very small in comparison with the other systems.

(To be continued.)

Scores of beginners in the bird-keeping hobby waste heaps of money every year by not knowing exactly the appliances to commence with, how to select their birds to the best advantage, and how to manage them on sound economical lines. This might easily be avoided. Every "new chum" can save himself the loss of money and valuable time by sending sevenpence to CAGE BIRDS office for "Canary Breeding for Beginners," which will give him a start on the right track. There are hints in it, too, worth money to the seasoned breeder, that will help him to "set his house in order."

The Substitute for Egg & Bread Crumbs,

SPRATT'S

COD LIVER OIL

Cage Bird Food.

Mr. R. A. BROWN, Sec. of Glasgow and West of Scotland Norwich, Mule, British and Foreign Bird Club, writes:—

"I have used your Cod Liver Oil Food and C. and C. B Food, totally supplanting the usual Egg Food, these last two seasons and have great faith in its nourishing properties.

"I have successfully reared over fifty young birds on it and find its easy manipulation and handiness a decided boon in the bird room."

Rears from the Nest Gives Stamina.

SAVES TROUBLE & EXPENSE.

In 3d. and 6d. Tins, post paid, 6d. and 9d., also in 3½ lb. and 7 lb. Bags, Price, 1/3 and 2/6, post paid, 1/9 and 3/2. Send postcard for Samples also FREE Booklet on "Canary and Cage Bird Rearing."

24 & 25, Fenchurch Street,

LONDON, E.C.

OBSERVATIONS ON SOME BRITISH FINCHES.

By J. S. CRAWFORD.

(Continued from No. 295).

The Hawfinch Considered.

We now come to the Hawfinch (*coccothraustes vulgaris*), known locally as Common Grosbeak, Cherry Finch, Cobble Bird, Haw Grosbeak, Chuck, etc. This Finch is not nearly so common as the Greenfinch, although I understand he is on the increase.

Like the Goldfinch and Bullfinch, the Hawfinch is most conspicuous about the head, the bill appearing to the casual observer as being too big and unwieldy for its bearer, but to my mind it tends to give him a majestic appearance. The Hawfinch cannot possibly be mistaken for any other Finch or even British breeding bird, and is the largest of his family.

As already stated, his outstanding feature is his enormous bill. The throat feathers round the base of the bill are black; the cheeks and crown, dark or reddish-brown; nape, ashy-grey; back, dark or reddish-brown; and the wings are also black. The Hawfinch mates about the beginning of May, and builds, unlike the Greenfinch, a very tidy nest of twigs and lichens, lined with hair and small roots.

The nest is usually placed on the under branches of trees, in bushes, and at times the ivy growing round the trees.

Three to five is the usual clutch, and the eggs are greenish-grey, spotted with brown and streaked with black. The Hawfinch is in no way a songster, having merely a low, plaintive note.

Like the Bullfinch and Greenfinch, the Hawfinch has incurred the gardener's deadly enmity, and the severe punishment meted out to it is, I believe, the cause of the bird's shyness, and this can be easily understood. The gardener maintains that the Hawfinch destroys his peas, cherries, etc., which is quite true, for I have seen many rows of promising peas destroyed by the Hawfinch in a few hours, his great bill doing great destruction among the ripening shoots; but we must not overlook the fact that the Hawfinch feeds its young almost exclusively on insects, thus proving of service to the agriculturist and gardener. The Hawfinch also includes in his diet berries and seeds, such as beech, yew, hawthorn, and hornbeam.

As a cage bird the Hawfinch is not of much account, but of late years it has come to the front as a show bird, many splendid specimens being exhibited at the various shows throughout the season.

A Friend of the Chaffinch.

We now come to the Brambling (*Fringilla montifringilla*).

This bird, called also Bramble Finch, almost defies description, being strangely spangled indeed. My readers, however, will easily recognise him by his being about the size of the commonest of the Finches—the Chaffinch—but stoutish, with the head and back of neck mottled in black and grey, breast, throat, and chin, yellow fawn, with pale yellow on the under parts. The rump is white, and this is very noticeable when the bird is in flight.

He only visits us in numbers from the north during hard frost or when severe winter weather is prolonged, thus driving him south in search of food. When foraging for food he congregates with the Chaffinches, Linnets, Redpolls, and the like. He is a very shy bird, and takes flight easily, and when disturbed will almost invariably make for the shelter of trees.

£100 for a Single Onion

A record crop of One Ton of Onions was last year grown from a 1s. Packet of our Leamington Giant Onion Seed, and this year we are offering £100 for the best Onion grown from the same seed. There will be 60 other prizes, Particulars with all 1s. and 2s. 6d. packets

ROGERS, Seedsmen, Dept. A. Leamington.

An Interesting Question Night.

Are Early Marriages a Mistake?

The L. and P.O.S. Discuss this Weighty Problem.

At the last meetiug of the London and Provincial O.S. a number of members and friends met with the object of holding a "question" evening. Mr. J. W. Ramsden occupied the chair. For the benefit of novice readers, we may say that the idea of a "question" evening consists in the members dipping their hands into a hat and picking out at random questions which have been written on slips of paper beforehand. Sometimes a member will get a question which he is not in the least fitted to answer, and considerable resource and ingenuity is therefore needed on his part to meet the difficulty. On the other hand, it may so happen that a question will fall into the right hands, and then the company present are treated to an interesting and instructive reply.

A question relating to the treatment of egg-bound hens was in progress when we entered the room. Mr. Oldaker, that veteran metropolitan fancier, was prescribing a few drops of cod-liver oil sprinkled over the egg food, with a few drops of gin in the ailing bird's drinking water. He was of the opinion that one of the most relaxing of seeds was linseed. The question arose of the effect niga seed had on egg binding. Mr. Hudson thought that niga possessed valuable curative properties, but Mr. Couzens declared that his experience was not in favour of niga, as although he had always given his birds plenty of niga, he frequently suffered from cases of egg binding. Mr. Matthes recorded his verdict in favour of cod-liver oil and brown sugar. Mr. Lambert Brown had a fondness for niga seed, but said that it had a tendency to fatten.

Colour Feeding from the Nest.

The question that Mr. Tringham extracted from the hat was as follows:—"Is colour feeding from the nest harmful or otherwise?" Mr. Tringham said the question was a ticklish one. In his opinion and experience the results were scarcely sufficient to justify the trouble. The idea of colour feeding from the nest was, he understood, chiefly to prepare the youngsters for the young bird shows. The speaker referred to the special preparations made by Messrs. Spratts and other firms which were of assistance in colour feeding from the nest. Mr. Couzens approved most heartily of the practice. He colour-fed all his young birds, as he found that it accustomed them to the taste of the colour feeding. It was most difficult to get the old bird sometimes to take on colour feed, but the young one that had been trained to take it from his early days never refused it later on. The Chairman said that the chief advantage of colour feeding young birds from the nest consisted in the improvement it effected in the colour of the flights and tails. It was also of service—as Mr. Conzens had pointed out—in getting the young birds accustomed to the colour feed, which was a necessity later on. Mr. Tringham thought there was a difficulty in the way of colour feeding from the nest for anyone who believed, as he did, in the milk sop theory, that colour feed made the milk sop unpalatable. Mr. Ramsden said that his method of administering the colour feed to young birds was to make sponge cakes in which a certain amount of colour feed had been mixed. He gave it this way to the old birds during the moult; it was grated up and administered dry. It was stated that fully 50 per cent. of present-day breeders colour fed from the nest.

Waking Up Lazy Birds.

Mr. Hawes, putting his hand into the hat, drew out the question: "How would you bring a bird into condition that seemed lazy and heavy?" In answer, the speaker was of the opinion that such a state of things arose from constipation and over-fatness. His experience was practically confined to British birds, and his answer would therefore only apply to that section of the fancy. He would give an ailing British bird of that character a course of very light Epsom salts, feeding it with plain food, of course. At the same time he would take one ounce of isinglass, put in in an oven in a small jar, moistened with a little water, and when this had run into fluid he would take it out and let it cool into a jelly. He then would take a small sponge cake, mix the izinglass with the cake, and some more seed, give a spoonful every day in the water with a little sherry wine, and half a teaspoonful of colour food in the drinking water. One week's treatment in this manner was generally sufficient with him to cure any bird suffering from laziness. He would vary the dose and the proportion of the ingredients according to the size of the bird being treated. Mr. Dobson said that one of the best tonics he knew for Canaries was half-quartern of sherry wine with enough quinine as would cover a sixpenny piece. A little of this mixture put into the drinking water was a most effectual stimulant. Mr. Picard was a believer in the ordinary orange quinine wine. Mr. Hawes said that he always kept in his house a quartern bottle of Epsom salts with a little whisky in it.

Mr. Couzens drew the question as to whether, in mule breeding, one could expect the best results from the mating of Finch cock and Canary hen, or Canary cock and Finch hen. Mr. Couzens said his experience of Mule breeding was limited, but he thought it was generally understood that it was best to have the hen Canary.

Buff Cock to Yellow Hen?

Mr. R. J. Pretty drew another question about mating: "In Norwich or Yorkshire Canaries, was it better to mate the buff cock to the yellow hen, or the yellow cock to the buff hen?" He replied that it depended greatly upon the birds to be selected. For himself, he preferred to mate the buff cock to the yellow hen, especially if he wished to produce size. Mr. Ramsden thought that the other alternative generally resulted in producing better heads and birds generally of better type. Mr. Lambert Brown thought that, given birds of equal quality, the result would be the same.

Colour Feeding Borders.

Mr. Dobson was asked: "Should Borders be colour fed?" and in his reply seemed inclined to the affirmative. It was stated, he said, that colour feeding coarsened the feather, but he did not think it did. He attended a bird show at Clapham last season, and had seen two birds winning prizes which in his opinion had undoubtedly been colour fed. Another speaker thought that it was highly probable that the majority of Borders at the present day were colour fed, if only very lightly. It was impossible for even a most careful judge to detect a bird which had been colour fed with discrimination. Mr. Cunningham said that a well-known authority on Borders advocated the feeding of Borders with nasturtiums. He had bred Borders for the last eight or nine years, and also used nasturtiums and dandelions. He thought that green blood gave a fine colour without any other assistance, but he believed in improving the colour of Borders by natural means. The question was asked as to whether raw pods gave the same result as the prepared article, and the answer was that there were pods and pods. If you got the right kind of pods you would get practically the same result.

Mr. Pretty was asked whether he considered the Chaffinch and Bramble Finch true Finches or a link between the Buntings? He thought that a very difficult question. He thought there must be a link somewhere, and the fact that he had seen a Chaffinch disgorge its food influenced him in believing that it might have some relation to the Buntings.

When ought a Bird to be Bred with?

The most exciting question of the evening was the last one, drawn by Mr. Ramsden: "Was it better to breed with young birds in their first season, or to let them rest for a season?" Mr. Ramsden thought no breeder ought to use a bird before it was eighteen months old. There were exceptions, of course, to every rule, but as a general principle he advocated the turning of the hens into one room and the cocks into another, out of sight and out of hearing, consequently out of mind. His friend Mr. T. Heath, who would be known to them all as one of the most successful breeders of his time, was also a believer in this principle, and he remembered very well seeing the huge flights which Mr. Heath used for the purpose of caging up his young abbots and uuns. Mr. Crabb, their worthy ex-chairman, also held the same belief. The Canary breeder had to remember that going through a show season was a most exhausting experience for a bird, and consequently it was necessary to prepare the constitution of young birds by giving them plenty of reserve force. The late Mr. Greame, a world-famous breeder of Belgian Canaries, never bred with a bird until it was two years old. This was a fact endorsed by Mr. Dobson, who declared that Mr. Greame had the finest lot of Belgians he had ever seen. He remembered going into Mr. Greame's rooms and seeing 300 Canaries flying in a flight cage, and healthier or more cheerful specimens he never wished to see. There were Cinnamons, Yorkshires, Scotch Fancies and Belgians. So the principle applied equally well to one variety as to another.

Mr. Hawes was inclined to disagree with the idea. In a state of nature, he pointed out, young birds bred as soon as they arrived at their proper growth. This argument was combated by the statement that Canaries do not live a natural life, and consequently do not come under the same conditions. Mr. Ramsden then proceeded to touch on the case of a Cinnamon breeder very well known in former times, from whom he had bought some of the most wonderfully healthy birds he had ever had in his possession. These birds had each had their liberty in the open air for eighteen months before he purchased them. He found them flying in a huge flight, and the seller stated that they had never been bred with, though he had found eggs in the flight. Mr. Matthes thought the whole question resolved itself into whether a Canary breeder could afford the space to cage off his birds, and whether he could afford to keep his birds separate for so long a period. He advocated a compromise, and thought a breeder might take an eighteen months old cock and put it up with a young hen. Upon another speaker making the suggestion that perhaps it would be better to have a young cock and mate it with an old hen, the Chairman declared that young cocks were like young men, somewhat rash and a little erratic. He thought that it was always best to rely upon an old bird as a cock. Speaking about the Yorkshire breeders, for whom he had a great admiration, and who, he thought, could give points to most of the Southern breeders in every respect, he said that it was the custom in Yorkshire in almost every bird room for the young birds to be put aside. Mr. Hawes queried whether the reserving of a bird in this manner did not have a tendency to make it lose stamina, and prevent the evolution of its natural tendencies. Another speaker said that it was undeniable that the same pair would breed better birds the second year of their lives irrespective of whether they had been bred from or not.

Mr. Matthes thought that the object of the Yorkshireman in reserving his young birds was to keep them as show specimens. It was certainly a fact that reserving a show bird in such a manner improved it as a show specimen. Mr. Ramsden thought they could not do better than follow the example of the North-countrymen. As a rule a Northern fancier went deeper into matters than they did in the South. Every bird was marked, and all the problems of breeding were carefully and patiently considered. They had sufficient strength of mind to set their young birds on one side, and they reaped the benefit in stock improved both in health and quality. Mr. Hawes questioned whether it was not all a waste of space and a waste of time, and a waste of the bird's natural vigour. The seasons arrive and stimulate the bird's natural propensity to reproduce its kind, and to disregard nature's injunction was to fly in the face of providence, as it were. Mr. Ramsden pointed out that the breeder who reserved his young birds did not feed them up, consequently there was not the same material heat in these youngsters as there would be if they followed the ordinary proceeding and gave the young birds aphrodisiacs in the shape of stimulating foods. The tendency in the Southern fancier was to get all he could while he could, and hang the consequences. He had seen birds up in Yorkshire bred from in their sixth year and after.

Mr. Matthes: But there is a great difference in the climate up North. Mr. Oldaker: The air is much purer, and the conditions altogether different. Mr. Lambert Brown thought that it was the ruin of many young birds to try and get too much out of them in their first season. The Chairman then referred to the case of a bird that he had sold to Mr. Pond, the well-known chemist, of Fleet-Street, and argued from it that bachelordom on the part of a Canary was conducive to longevity. This particular bird had been kept by Mr. Pond for sixteen years in the one cage unpaired. But the Chairman did not think they would get any breeding bird to last for so long a period. Mr. Hawes: That bird did not have any chance of hearing a hen. Mr. Ramsden: No. I don't suppose it did. Mr. Hawes: My idea is that one ought to follow nature as closely as possible. I have known a bird fall dead off its perch through sexual excitement and through not being allowed his natural outlook. Upon the question being raised as to how long a bird took before it reached maturity, the Chairman thought that from 18 months to two years generally covered the period. Mr. Dobson said that the Lancashire was an exception to this, as it sometimes took 5 or 6 years before reaching maturity.

The time for breaking up the meeting then arrived, and a hearty vote of thanks to the Chairman for so ably presiding closed a most interesting little discussion.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

JU-VIS
BEEF TEA with valuable Vegetable additions.
A Breakfast Cup for a 1d.

WILD BIRD LIFE.

Spring Dress.

A pair of Robins have nested in one corner of the Park, and the cock bird daily visits our garden and aviaries for food, taking a bee line over the fence to his mate. The Robin is a general feeder, and we have noticed him vary his usual diet of worms with small seeds, crumbs, and the mixed meal left over by the fowls. The plumage of wild birds is just now at its best, and the Robin is no exception to the rule. His ruddy breast is brighter than ever; the touch of grey at the neck, partaking more of the silvery colouring of the back of a Bullfinch, than the dull grey, scarcely discernable during the autumn and winter. One cannot but notice this brightening of plumage in birds (even in species devoid of bright colour). I happened to get within a dozen yards or so of a Jackdaw, unnoticed by him. His plumage was glistening with reflected light, as though some master hand had just prepared him for exhibition, and "massage" with a silk handkerchief had given an ebon polish to the hard feathers; the grey neck patch, too, was quite silvery in tone. As he stood on the old lichen and moss-grown stump he and his surroundings made a picture of surpassing beauty. Here is an instance of a common black bird so improved by healthy, vigorous condition, incidental to the season, as to claim more than a passing notice; and so we shall find through the whole list of our wild birds this increase of beauty, in some species so pronounced as to make the uninitiated almost think they have discovered some feathered rarity.

Persistent Singers.

Thrushes and Blackbirds will sometimes sing while standing upon the ground, especially in the Spring and early Summer months.

Birds and Moths.

Birds will frequently chase moths, as if in sport, catch them, and after carrying them some distance, let them go. One has been observed to be caught by one swallow and flutter away.

Early Nesting in Edinburgh.

Nearly a fortnight ago, says a writer in an Edinburgh daily paper, I noticed a female Blackbird collecting building material in my garden. I watched it carefully and discovered the nest. The bird is now sitting on three eggs. Is this not very early for this district?

Trapping Jackdaws.

One of the illustrated papers gave a curious picture recently of a method of trapping large birds. Paper bags are laid upon the snow with food placed on or near them. When the birds have become used to the sight of the bags, the bait is placed inside, together with a little bird-lime. When attempting to feed, the limed bag adheres to the head, the bird is unable to see, and floundering about is easily caught. Both Jackdaws and Crows are caught in this way.

Hooded Crows.

The Hooded Crows are collecting in flocks to leave our shore for their Scandinavian homes. The gamekeeper and the farmer will be glad to see the last of them for a season; eggs are not safe in the covert, or preserved water side, and young chicks and ducklings have a mysterious habit of disappearing when the Hoodies are about. These birds are larger than the ordinary Crows, and are consequently more powerful. They are mischievous and prying, and will do much more damage to breeding Wildfowl than either Hawk or Gull. During severe weather they prey upon weak or wounded birds, half starved Thrushes and Redwings, frequently furnishing them with a meal. The Hoodie never suffers in the severe weather.

MAINLY CANARIES—continued.

YELLOW Yorkshire hen for buff York hen, or good cock Linnet, on full song.—F. 22, Pembridge Mews, W.

EXCHANGE yellow Belgian cock, cost 30/-, for a good singing Canary.—F. T. Boreatton Park, Baschurch, Salop.

BUFF Yorkshire cock, first Waterhouses, 14/6 exchange Hawfinch good Norwich; offers. Boswell, South-st., Redditch.

EXCHANGE Norwich show cages and Palace aviary for British, or offers.—G. Smith, 40, Skebbrook-st., Earlsfield.

EXCHANGE Yellow Yorkshire cock for Hartz Mountain Roller; must be good whistler.—McEwan, Hamilton-st., Larkhall.

TWO yellow Norwich, two Yorkshire hens, large; vhe for pair Cinnamons, or Lizards.—Tyrer, 69, Bostock-st., Warrington.

PAIR typical Yorkshires; cock, winner; 17/-; exchange exhibition Foreigners; offers.—Colley, 21, Fenton-st., Brierley Hill.

EXCHANGE seven hen Canaries for good young German cock, or sell 14/- each.—Boreatton Park, Baschurch, nr. Shrewsbury.

TWO ben light marked Crestbred cocks, good sizes, 1907 birds, sell 12/6 each; exchange good hens.—J. Richmond, Pateley Bridge.

FINE 1907 Yorkshire hen, 5/-; exchange good singing cock Canary, or offers.—R. Davies, Erynffynnon-terrace, Abergele.

WANTED, offers in Norwich Canaries (mostly hens) for eight long distance Homers.—D. Wake, The Moor, Alnwick, Northumberland.

EXCHANGE, seed potatoes wanted, cock Canary, four hens, dandelion seed, Bullie-Greenfinch; genuine.—A. G. Coombs, Paulton, Bristol.

SMALL Toy black Pom; five months old; 25/-, or exchange good Norwich or Cinnamon Canaries.—H. Heare, 85, Gresham-st., Leicester.

GRAND pair of Norwich, Buff cock, Yellow hen, 15/-; exchange anything useful; approval deposit.—Haxley, Combrash, Raunds, Wellingboro'.

ST. ANDREASBERG Roller hens; four 1907 birds, cold aviary all winter, 3/6 each; exchange Yorkshire.—Goddard, 15, Claremont, Hastings.

EXCHANGE Buff Green crest-bred cock, good strain, for Yellow Plainhead cock; or sell 10/-.—George Smith, 32, Union-place, Grangemouth.

EXCHANGE slim Yellow 1907 Yorkshire hen, brass hanging cage, cock Linnet, for pair Norwich or Rollers.—Wright, 10, Shellfield-rd., Southport.

TWO 1906 crest-bred hens, 10/- each; Mep crest cock, 1906, 5/-; Border hen, 1907, 3/6; or exchange poultry.—Brewer, 5, Picton-st., Griffithstown, Mon.

COCK Canary and hanging cage, 10/-, pair Canaries and breeding cage, sell or exchange gent's silver lever watch.—Tompkins, 235, High-rd., Willesden Green.

TABLE cutlery, high class manufacture, electroplate goods, knives, forks, spoons, carvers, teapots, etc.; exchange Canaries.—Cutlery Co., 24, Carnarvon-st., Sheffield.

WANTED, young, healthy hen Canary, exchange pearl pocket knife, warranted best hand-forged blades; workmanship guaranteed.—Gill, 2 in 2, Eldon-st., Sheffield.

TWO St. Andreasberg Roller cocks; '07; full song; will sell £1, or exchange two good Norwich variegated Plainhead cocks, '97; on approval.—John Fletcher, Grindleford.

LIVER Spaniel Dog, three months, 25/-; Rifle, shoots hard, 15/-; dark Goldfinch, Mule cock, yellow, 7/6; exchange good crests, plain Canaries.—Fewster, Middlestown, Wakefield.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1-, 1 6 according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 151, Fleet Street, London. Terms for Display Advertisements on application.

Ashmore, 167, Heath-st., Birmingham.

JOHN A. REECE,

estab. 32 years, awarded 28 medals and diplomas. The perfect breeders, single and double, fully fitted, including 4 cross bar front, top, nest pan doors, removable wood and wire divisions, sand trays, etc., beautifully finished wire fronts a speciality, one quality, the best metal song cages, box cages; illustrated list penny stamp.—Jockey Wire Works, Colston-yard, Bristol.

FOR JOINER-MADE CAGES CHEAP.

Breeding cages, single, 18 inches long, 13 inches high, 1 9; 26 inches by 13 inches by 11 inches, 2/10; double, 36 inches by 15½ inches by 11 inches, 4 6; 3-compartment, 40 inches, by 1½ inches, by 11 inches, 5 6; any size made equally cheap: remember made by experienced joiners only, these cages have given satisfaction in the past, and are much improved this season; list of 51 sizes free.—Pass, Cage Maker, 48, Annesley-rd., Hucknall, Notts.

570 CHALLENGE BREEDING CAGES

were sold by me last season, and not one depo it was returned; for proof, write to Editor of CAGE BIRDS. They are made from selected planed pine boards, black enamelled outside, blue inside, sliding partitions, sand trays, nest boxes, seed hoppers, and loose wire fronts; 18 inches, 2 -; 20 inches, 2 6; double, 33 inches, 4 -; 36 inches, 4 6; any size cage to order. Remember, these are made from pine boards, not soap boxes.—Henry Morris, Cape Hill, Birmingham.

THE "DURABLE" WIRE FRONTS.

Finish that cage you are making in the best possible way, by using a "Durable" front. Remember you cannot get this quality for lower prices than the undermentioned. Nothing used but the very best punched bar and 16 gauge wire (not pinwire). Prices: 12 inch, 6d., 15 inch, 7½d., 18 inch 9d., 21 inch 10½d.; all 12 inches high; fronts with four crossbars, 14 inches high, 15 inch 9d., 18 inch, 10½d., 21 inch, 1/-; show cage fronts (Norwich, Crest), 4d. each, any size quoted for.—J. Walmsley, 6, Brandst., Nottingham.

BREEDING CAGES.

Best and most convenient cage on the market. Being a breeder myself, I know what is required. Beware of cages 8 in. wide; they are useless. Note my sizes and compare with others. Two compartments, 30 in. by 15 in. by 11 in., 3 6; three compartments, 53 in. by 15 in. by 11 in., 5/-; four compartments, two top and two bottom, 7 -; four compartments, 70 in. by 15 in. by 11 in., 7 -; six compartments, 10 -; eight compartments, 12 6; all the above are fitted loose fronts, sliding partitions, nest boxes, seed hoppers, etc., and are 11 in. wide. Customers own designs executed. Large bundles moss and hair for nesting, 6d., 9d., 1 -, post free.—Kendrick, Carpenter, 14 Cook-st., Coventry.

BREEDING CAGES.

There are breeding cages and things they call breeding cages, but I am putting on the market a well finished cage, planed outside and inside, not left rough inside to breed red mite, but made as smooth as the outside, polished outside, mahogany or black enamelled blue inside, fitted with sand trays, food hoppers, nest boxes, sliding partitions, and loose wire fronts, 18 in. 2 -, 20 in. 2 6, 24 in. 3/-; double, 30 in. 3 6, 33 in. 4 -, 36 in. 4 6; all kinds of cages or cases made for the trade.—J. Ashmore, 167, Heath-st., Birmingham.

Are You Looking

For Breeding Cages, Flight Cages, Drawing-room Cages, Singing Cages or any other Kind of Cage?

Also the very best "Charpic," imported direct from Germany, prevents sweating and does not harbour parasites as Hair does, being at once cooling instead of heating (beware of cheap substitutes and common cotton). Fresh clean Moss for Nesting—any quantity supplied.

Birdlime—strongest and best in the world—the original XXX, 4d. per box free. List of Sparrow and other Traps, Nets, &c., free for the asking

OWEN, Nova Scotia Wireworks, BLACKBURN

RINGS The Oldest Ring Maker in The World.

My 1908 improved rings are now ready, also my Pedigree Books. These rings are the finest ever put on a bird's leg. All the numbers are embossed, and not same as all other makes, stamped in; therefore cannot fill up with dirt; all edges are neatly rounded. They are not cheap flimsy rings that birds can nip to the leg and cause inflammation, as many a good bird has been lost through cheap rings. Prices as before, 6d. per dozen, 5/- per gross. Pedigree Books, 6d. each. Agents apply at once; enclose stamp for terms.

R. KREMNER, 96, Gt. Moor Street, BOLTON.

THE IDEAL BREEDER,

If you want a good, sound serviceable breeding cage, kindly give me a trial. All cages sold by me are guaranteed to be built throughout with first quality pine by practical men; not thrown together by boys. Single breeders, 20 in. long, 15 in. high, 9 in. wide, 2/6 each; 22 in. long, 3/- each; 24 in. long, 3/6 each; double breeders, 36 in. long, 15 high, and 9 wide, sliding division, 4/6 each. All fitted complete with loose fronts, sand drawers, planed inside and out, and pediment tops. Singing box cages for Canaries, Goldfinches, Linnets, etc., 1/-, 1/3, 1/9, and 2/- each; cottage-topped Thrush cages, 2/6, 3/-, and 3/6 each; nursery cages, 6d. each; bow-fronted Lark cages, with two brass bands, 2/6 each; hanging cages for Canaries, all metal, with cut glass round, and opal feeders, 3/6 and 4/6 each; solid brass ditto, with ruby cut glass and richly ornamented base, 5/6, 6/6, 7/6 and 10/- each; indestructible Parrot cages, round, 4/6, 5/6, 7/6, and 10/6 each; square ditto, 10/6, 12/6, 15/-, 17/6 and 21/- each. If you want a fully guaranteed article, I can supply you, but if you want a treacle-daubed eyesore that the wires will fall out of, don't order from me, as I do not make them. All cages sent on approval at my risk; cash or deposit; and so confident am I of their supremacy over others that unless purchasers find them exactly as represented I give them permission to smash them up, and I will refund their money. Will imitators please copy? See British Birds also Roller columns.

Bow-fronted Lark Cages 1/6. Send for Catalogue—everything in Bird line. Established 1879.
J. SANDIFORD, Bird Specialist and Judge,
Telephone, 440. **PRESTON, LANCS.**

MATTHEWS, LINNET KING.
Exhibitors Mulebreeders and Contest-singers.—I have a finer stock of British birds than any two dealers in England, and am patronised by all the leading judges, contest-singers, and mulers, as they are satisfied who keeps the largest stock, and the very best, all at working-men's prices. I give every fancier a cordial invitation through my aviaries and see my stock, and you will be perfectly satisfied who keeps the largest and best stock. I keep every variety, so state your wants, and I send them on seven days' approval at my own risk. I have a grand lot of Linnets, well pencilled, steady, nut-brown backs, 1/6 and 2/-; a few real Giants for keenest competition, 3/- each. Bargains. I have the finest lot ever seen; all guaranteed ready for male-breeding; good large, healthy Linnets, good nut-brown backs, breasts like blood; blue beaks, in full wild song, only 2/- and 2/6 each. Those intending mule-breeding should send at once for one of these special birds. I have also 200 Linnets in full song; been trained under my old, well-known Cheshire champions, 2/- each, with polished singing cage, instructions how to feed, also packet of Mixture, 3/- lot. Also a nice lot of moulted Linnets in full song, ready for contest, at 3/6 and 4/- each; worth double. Goldfinches: Goldfinches; a grand lot, with deep square scarlet blaze, well buttoned, and mooned, 5/- each; large for muling, 4/- each. Bramblefinches: Real Toppers for keen competition, 1/- and 1/6 each; also a few house-moulted, finger-tame, sure mulers, 2/6 each. A few moulted Linnets, in full song, with ben Canary, 5/6; two pair, bred mulers last year, 6/6. Linnet and Norwich Canary, 4/6; Siskin and Redpoll 4/6; Greenfinch and Canary, 3/6; two Greenfinches, bred Mules, 2/6 each; Twite and Redpoll, 2/6; Bramblefinch and Chaffinch, 2/-. A few grand Twites for showing 1/6 each; also large Giant Yellow Greenfinches, 1/- each; Yellow hens, 6d. each; one house-moulted Goldfinch, father of six Mules, 6/6; or any kind of British you require. Hundreds in stock, and all these special birds are in full song, finger-tame, been caged since Christmas; not fresh caught rubbish same as most dealers send out, so beware of imitators, who, as you can see, are copying me. Postcard before birds. I have over 400 testimonials open for inspection; all received since August; so don't delay. Send your money to the Editor and your orders to me. That is all I want. I am sure to satisfy you, all at my own risk. Cash or deposit.—Matthews, Bird Specialist, 44, George-st., Hyde, Cheshire.

PERHAPS A DOUBT
exists in your mind as to which advertiser is most likely to give you best value for your money. I make no extravagant claims or ridiculous assertions but I do guarantee to give better value than any man in the trade, and to prove this to your satisfaction I earnestly ask for one trial, and am willing to be judged by result. All birds sold by me are guaranteed to have been caught before March 1st last in County of Worcester, and all in pink of health and condition, and well on hard seed. Grand large cock Linnets, with nutbrown backs and rich red breasts, 1/- each, three 2/6, six 4/-, twelve 7/-; few extra large cocks in full free song, guaranteed been in aviary since October last, 2/- each, three 4/6, six 8/-. These Linnets are guaranteed exactly same as supplied by me for past 17 years to Linnet fanciers and contest singers in all parts of Yorkshire, Lancashire, Cumberland, etc., etc.; so why not purchase direct from me and save all intermediate profits. Few extra special cock Bullfinches, like paintings, been caged since Oct. last, and finger-tame, 2/6 and 3/- each. Two cage-moulted hen Bullfinches, finger tame and very rich colour, and ideal hybridisers, 3/- each; loud free-singing cock Skylarks 1/6, 2/-, 2/6, 3/- and 3/6 each, cages included. Grand lot cock Greenfinches, very steady, 6d. each, three 1/-; few extra large yellow cocks for muling, 1/- each, cock Chaffinches, guaranteed in song, 1/- each; cock Bramblefinches, 9d. each; Tree Sparrows 1/- pair; cage moulted cock Goldfinch, full song, 1/- pair; cage moulted cock Goldfinch, full song, grand square blaze, 6/-; three year old white-legged peathroated cock Goldfinch, finger tame, full song, guaranteed muler 10/-, cock Goldfinch mules 6/- and 7/6 each; one winner, first only time out, 12/6; cock Linnet mules 6/- and 7/6 each; cock Greenfinch mules 4/-, 5/- and 6/- each, all mules guaranteed in full song. Self-acting spring net traps, 18 in. long, 9d. each, 24 in. 1/- each, carriage 4d. extra. These traps are suitable for catching Nightingales or any other soft or hardbills, from Wren to Rook, and are by far the largest, simplest and best traps on the market. Please note that all birds advertised by me can be seen on my premises all caged separately and are guaranteed to have been properly netted by practical catchers in Worcestershire during open season, and must not be confused with sea coast birds now being caught on spring flight, and which die of pairing fever very quickly. All are sent on approval, on deposit system of CAGE BIRDS, or on receipt of cash, and money refunded in full if every satisfaction not given. I was the originator of approval system with wild birds, and have far more Worcestershire birds though my hands than all other dealers together. Contradiction defied. Thousands of testimonials published in this paper, testifying to quality of my stock. Established 17 years.
W. CORE, 131, Cooch Street, Birmingham.

Read the following. One of the latest to bear out our statement from numbers received during the last few days:—

Stoke-on-Trent. Have been taken in so many times.

Stoke Workhouse, Loudon Road, near Newcastle Stoke-on-Trent, 17th March, 1908, writes:—I am thinking of trying you (Mackley Bros.). I am sorry to say that I have been taken in so many times It don't give me much faith to trust anyone. I want a pair of good Norwich that will do me some good. Yours truly, Thos. Finikin to Mackley Bros.

(After Order Executed.)

The Best he has seen for a very long time.

Stoke Workhouse, London Road, near Newcastle, Stoke-on-Trent, March, 21st, 1908. Birds arrived in the pink of condition this morning. They are a grand pair; your dealing is most straightforward. I can assure you they are the best that I have seen for a very long time. They look like a pair which should turn out some very good youngsters. Thanking you for sending such a pair. Yours faithfully, Thos. Finikin to Mackley Bros.

It is a well-known fact no person can give the quality we can. All our customers are more than surprised at the marvellous value we are sending.

The safest and most reliable house in the Kingdom. Awarded 9,000 prizes. A world's record.

Under the distinguished patronage of H.I.M. The Empress of Germany and The Sultan of Turkey

THE BEST SHOW

Some jealous people may doubt it, or wish to contradict it, But it is open for your inspection. A visit to my specially constructed bird rooms, built in the open country, will prove to the most sceptical person that I have by the far the best Show of Canaries ever seen in bird rooms. My Stock includes many winners at Leading Shows, every bird is full quality and the right type, and my prices are within the reach of all. Having over 1,500 birds to select from, I can offer you odd birds or properly matched pairs that will give you every satisfaction. Call and inspect my stock or let me send you birds, carriage paid on 7 days' approval at my risk. For quality and cheapness combined I stand alone.

If you doubt the quality of my birds, read a few of the many thousands of unsolicited testimonials I receive every season, originals of which can be seen at my office, all bearing official postmark. Note the dates.

Fair Hill, Haltwhistle. March 28, 1908.—Received birds this morning; I am very pleased with them; they are a finer pair than I expected for the money; I shall be sure to get more from you.—M. Neill to Miss Storey.

58, Townshead, St. Stevenstown. March 28, 1908.—Received Norwich hen last night. I am highly satisfied; she is splendid value for the money.—J. Wilson to Miss Storey.

1, Howls Terrace, Londonderry. March 27, 1908.—Bird arrived in splendid condition, for which I thank you. It is honestly worth double the price I paid; your prompt attention does you great credit. —W. Causlin to Miss Storey.

12, Primitive Place, Beaufort, S. Wales. March 28, 1908. — Received birds quite safe, with many thanks. I consider them first class birds at a very reasonable price.—H. Rouse to Miss Storey.

Loansdean Cottage, Morpeth. March 28, 1908.—Yorkshire cock arrived in pink of condition; he is the right sort to breed high class birds. Thanking you for sending such a good bird.—B. Clark to Miss Storey.

113, Secret Row, Steventon. March 28, 1908.—I received birds on the 24th. They are doing well —in fact, you could not have sent me better and healthier birds; they are beauties; well worth the money. Thanks for your straightforward ways of dealing.—J. Gilmour to Miss Storey.

Wigan. March 27, 1908.—Birds arrived in good health; they are a splendid pair for the money; many thanks for prompt attention.—J. Pilkington to Miss Storey.

123, Bucknall Road, Hanley, Staff. March 27, 1908. —The Yorkshire cock I received from you is a bird to be proud of. I may state he is really a good bird, and is all you state your birds to be; you can always rely on my patronage.—W. Grains to Miss Storey.

I could fill the whole of this paper with genuine unsolicited testimonials, and I trust the above will induce you to send me a trial order, which will be the means of ensuring your patronage and that of your friends for the future. Travelling cages for journey 2d. each. I send all Canaries carriage paid on 7 days' approval. Full illustrated price list of birds, cages, and accessories 1d. stamp; illustrated list of birds post free.

Miss E. L. STOREY, BIRD SPECIALIST, **CROWLE, DONCASTER.**

NO PUFF HERE, but PLAIN HONEST FACTS!

That we possess an unblemished reputation of half a century.
That we are on The Bazaar Reference Book.
That we sell to serve again.
That for quality and lowness of price our birds are unsurpassed.
That every bird is personally examined by us before despatch.
That all fanciers requiring reliable specimens at a low price should state their wants to us.

The following are a few bona-fide unsolicited expressions of satisfaction selected at random from hundreds received quite recently:—

BETTER VALUE EVERY TIME.

Sandy Hill, Plumstead, Feb. 18, '08.—Dear Sir,—Have just received Roller Canary in good condition. Has not left off singing since I unpacked him. Am more than pleased; shall want another one shortly. Seem to get better value every time.—Yours truly, E. M. HASLER.

QUITE SUITED WITH THEM.

Feb. 14.—Sirs,—Both landed in grand order, and seemed none the worse for their ride. Quite suited with them. Will recommend you to all friends.—Yours truly, L. BAXTER.

HIGHLY PLEASED WITH IT.

Feb. 29.—Dear Sir,—Received the Canary all right, and was highly pleased with it.—Yours respectfully, J. BROOM.

IS SINGING WELL.

Catford, March 7.—Dear Sirs,—Bird arrived safely. Is singing well. I am very pleased with it. I shall want another later on, when I shall be very pleased to give you my order. Thanking you. Yours truly, G. A. BLOSS.

Note our present Prices:—

We have won thousands of prizes.

NORTHERN AVIARIES,
ORMSKIRK ROAD, PRESTON.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London.

SIBERIANS

HAVE ARRIVED AT LAST!

In grand plumage, the pink of health and condition, and all have grand large, square blazes. These are not imitation Siberians, [illegible] but the genuine thing. There has none whatever been imported since I had my last consignment four months ago. Those who think they have purchased Siberians have only bought Russians. Write for price, as they are very scarce, only 200 being imported. There will be no more this season. E. Power has also received 1,000 pairs of Cutthroats, Combassous, Cordon Bleus, Waxbills (red and orange cheek), Grey and Green Singing Finches, Ribbon Fiuches, Bishops, Silverbills, Bronzewings, etc., etc., all arriving in the pink of condition. Price all at 2/- pair, or 9/- dozen, mixed. Also just received the first special consignment of No. 1 Bohemian Rollers, specially imported from Boheme, Austria-Hungary. I defy any class of Canary to equal it in its mellow singing; each bird been trained by the flagolet and organ, with most melodious tones, and have 20 distinct changes of song. People that are fond of a good musical box, have their chance now to purchase a real Schoolmaster for rearing their young birds. Special cold room kept for these songsters. Note, these should be heard to be believed; there is no bluff about this. You will oblige by visiting my premises and hear them yourselves before purchasing elsewhere. Price, 12/0 each. German tame Bullfinches (Pipers), pipes most magnificent tunes; price, 10/- each, a bargain. If these birds do not pipe tunes, I will willingly return money. No. 1 Hartz Mountain Rollers, £2 16s. per stick of seven. These are not imitation No. 1's, as other dealers advertise them at less price than they can be imported from Germany. No. 2 Hartz cocks, £2 9s. per stick of seven. No. 3 Hartz cocks, £2 2s. per stick of seven. Genuine Hartz hens, guinea a dozen. 3,000 Canaries in stock; to be seen and heard, and no bluff.

One and Only Address

91, SCLATER STREET, SHOREDITCH, E.

ESTABLISHED A CENTURY.

CHAMPION ROLLERS.

Notice.—I have a splendid consignment of those extremely musical St. Andreasberg Rollers, these are splendid day and gaslight songsters; they are delightful, with their deep bass rolls, hollow rolls, sweet silvery trills, water bubble runs, piccolo trills, bell, sharp and gong notes, etc.; these are splendid quality, and are certain to please you; all on 6 days' approval, on receipt of P.O., or you can deposit the amount with the Editor, 8/6, 10/6, 12/6, 15/6, hens to match 3/-, 3/6, 4/-, inspection invited. — William Shaw and Son, 97, Essex-road, Islington, London, N.

TO WISE MEN

a word is sufficient. I have just received my last consignment for this season of the celebrated "Leipzig" Rollers, of which I am the sole importer. All are in magnificent condition, fit for immediate breeding, and cocks in full song, with long, hollow and double rolls, hollow bell rolls, waterbubble runs, soft roulades, sweet, silvery trills, bell, harp and flute notes, etc., etc., and are guaranteed entirely free from Titlark or any other harsh notes whatever, prices, cocks in full song, 7/6 and 8/6 each; Schoolmasters, 10/- and 12/6 each; hens, guaranteed same strain, 3/0 each. I have also received a few special "Seifert" contest Rollers, in full song. These birds are exceptionally soft and mellow in song, and excel in the hollow bell, deep bass, and shaking rolls, and among them are birds which have formed part of contest winning teams this year in Germany, prices, cocks 15/-, 17/6 and 21/- each; pure Seifert hens of same strain, 4/6 each. Anyone desirous of improving their stock, or of securing a Schoolmaster of the purest song, should try one of these contest birds, as nothing finer has ever been imported into England at double my price. The following few testimonials will prove quality of my birds:—"12, Bantling Old-row, near Annfield Plain. March 7th. Sir,—Roller arrived safe, none the worse for his journey, although it is snowing heavily here. He sang half an hour after arrival, and is a clinker. Thanking you for way you packed it. Yours, B. McKenna." "6, Long-lane, Dublin. March 4th. Sir, —I am pleased with Roller, which arrived safe, I think it only right that you should know that I tested him side by side with other Rollers that cost three times the price, and he is by far a better bird than any of them. He started singing within ten minutes of arrival. You certainly deserve to be better known. Yours, M. Hopkins." "Bermuda Cottage, Warren-rd., Guildford. Sir,—Rollers arrived safe. I am more than pleased with them. Thanks for sending such good songsters and straightforward dealing. Yours, T. Moore." "5, Branch-st., Higher Ince, Wigan. Sir,—Birds to hand. I thank you very much for the way you treated me. I went to station as you advised me to, and when I got there I could find neither stationmaster nor porter, but I could hear my bird singing packed up in the office, and he has sang ever since. Yours, W. Kaye." "15, Opposite Ashbrow Mills, Bradford-rd., Huddersfield. Sir,—Received bird safely on Saturday. He is a most splendid Roller, of excellent quality. His voice is quite rich and mellow. Thanking you for same. Yours, W. Tinker." "1, Fort-st., Roath, Cardiff. Sir,—Received bird quite safe, and am pleased to state I am quite satisfied, and will tell my friends where I bought it. Yours, J. Thomas." "Barrow-in-Furness. Sir,—Roller arrived safe. Many thanks for such a splendid bird. He commenced singing directly I put him in another cage; he is also singing splendidly while I am writing to you. I shall give you another order shortly, as your birds are as good as the advertisement. Yours, John Williams." "Harryville, Ballymena, Ireland. Sir,—Roller arrived safely, and commenced singing directly. Allow me to thank you for kind treatment and honest dealing, and I hope to circulate the quality of your Rollers in this district, as I am perfectly satisfied. Yours, Frank Falls." "133, Brettell-lane, near Stourbridge. Sir,— The Leipzig Roller I had from you a few weeks ago is a splendid bird, singing his lovely notes night and day. Thanking you for prompt attention. Please send following. Yours, J. Hill." "1, Albion-place, Pontnewynydd. Sir,—Please send me following. I am pleased to say the Roller I had from you last year is a splendid bird, and much better quality than I had from a prominent dealer for almost double the price. Yours, S. Plaisted." "27 St. Helens-rd., Dorchester. Sir,—Have instructed Editor to pay you deposit. In one word, the bird is excellent. Many thanks. Yours, Hy. Batchelor." "Dinnington. Sir,—Birds give every satisfaction. My friend is very fond of the cock bird, he is singing all day long. Yours, Wm. Kenny." "2, Hill Cottages, Killiney, co. Dublin, Ireland. Sir,—Please send following. The Bandmaster you sent arrived safe, and I am well pleased with him. Yours, J. Colclough." "28, Sussex-rd., Ford, Devonport. Sir,— I had a Bandmaster from you in December, 1905, and am glad to say that his song is in perfect condition still, singing day and night. Yours, W. Davis." "3, Commercial-row, Kirkstall, Leeds. Sir, —I am well pleased with the Seifert contest master you sent. He is singing nicely. Please send hen to match. He is such a sweet singer that I am going to try and breed a few like him this season. Yours, W. Watson." "Ashleigh House, Pocklington. Sir,—Roller arrived safely, and I am very pleased with him. He sings nearly all day, and I thank you for quick despatch. I shall certainly deal with you in future. Yours, A. Dunwell." "85, New Village Creswell, near Mansfield. Sir,—Bird to hand and I must say he is best Roller I have ever had, and I can assure you that you will get my future orders. Yours, J. Brewster." "Victoria Building, Hillstown, Bolsover. Sir,—I have had three Rollers from you, and am satisfied with all. Please send another Bandmaster, also hen to match. Yours, J. King." Later Mr. King again writes: Sir,—Received Bandmaster and hen in pink of health, and am pleased to say am highly satisfied with them." "Inglewood, Heyes-lane, Alderley Edge. Sir,—Roller arrived safe and began to sing within half an hour. He is the sweetest songster I ever heard. No approval is needed with such birds as these, as they are what you represent them to be. Yours, G. Birken." Please note all testimonials are entirely unsolicited, and full name and address is given, so that any sceptical person may make fullest enquiries. All birds are sent safely and warmly packed with food and water, entirely at my risk, on full week's trial, either on receipt of cash, or CAGE BIRDS deposit system, and cash refunded in full if birds fail to prove entirely satisfactory. So confident am I that these Leipzig Rollers are absolutely best strain on the market that I cordially invite any person to have one on week's trial, and one from elsewhere at any higher price, test them side by side, and unless mine is far better at less money return it, and I will refund everypenny of their money. I claim to be largest Roller retailer in United Kingdom, and it is the sheer merit of these birds that has gained for me this enormous trade.

W. GORE, DIRECT IMPORTER,
131, GOOCH STREET, BIRMINGHAM.

The Best Value

IN ENGLAND IN

YORKSHIRES

All in Breeding Condition.

If you want Yorkshires of the correct type, length, position and quality of feather, give me a trial and I guarantee to please you. Read these testimonials:—From 4, Bosvigo Road, Truro, Cornwall, March 22nd, 1908.—Yorkshire Cock arrived in grand condition and sung at once, as soon as I put it into a cage. I am highly pleased with it.—W. H. Broome to J. Taylor. Another from Hale View, Lloyd St., Altrincham, March 21st, 1908.—Received the three Yorkshires a few days ago and I am more than satisfied with them; all who have seen them are surprised at the quality and type for such low prices. More orders will follow soon.—W. Trevor to J. Taylor. Another from George St., Cellardyke, Anstruther, Scotland, March 21st, 1908.—Yellow Yorkshire Cock arrived quite safe and I am highly satisfied with him.—Jas. Scott to J. Taylor. Over 500 high-class Yorkshires in stock yet and all guaranteed untried. Orders sent off same day as received, carefully packed in neat travelling cages, with sufficient food and nourishment for the journey. Safe delivery guaranteed any distance, and all on seven days' approval at my risk. Champion Yellow Yorkshire Cocks at 7/-. 8/6, 10/6, 12/6, 15/- 20/- each; Buff Cocks, 6/6, 7/6, 8/6, 10/6, 12/6 each. All on Full Song and seven inches long. Clears, Ticked, Variegated, Cinnamon Marked and Clear Pink Eyed. Champion accurately matched pairs for breeding at 10/6, 12/6, 15/-, 17/6, 20/-, 25/- a pair. All guaranteed unrelated, and ready to nest at once. Extra good Yellow Hens at 4/6, 6/-, 7/-, 8/6, 10/6, 12/6 each. Buff Hens at 4/-, 5/-, 6/-, 7/-, 8/6, 10/6 each. Inspection invited at any time. Illustrated price list post free. Travelling Cages 3d. extra. Terms: Seven days' approval at my risk. Only address—

J. TAYLOR,

9, NORTHDALE ROAD,

Shaw, 97, Essex rd., Islington, London, N. Five doors from Cross-st. All cars stop at Cross-st.

HUDSON CHAMPION YORKSHIRES.

are what you want if you want to breed your own winners, bred from or related to winners at most of leading shows, Bradford, Windhill, Shipley, Laisterdyke, Palace, etc. I have a few pairs in clears, ticked, marked, colour-fed and natural colour cocks, 8/6, 10/6, 12/6; hens 6/-, 7/-, 8/-; pairs matched to breed winners at 10/6, 12/6, 15/-, £1; cold room bred and kept ready for breeding. I have received scores of testimonials for this strain, three days' approval. I desire no man's money who does not get satisfaction; stamp reply.—Hudson, Confectioner, Thackley, Bradford.

THE NOTED PARAGON YORKSHIRES.

Having won the much-coveted £21 Yorkshire Challenge Cup, 1903, for the fourth time, is ample proof that the "Paragon Strain" is what the name implies, viz., the best of its kind the world can produce. I am the only exhibitor that ever won this valuable trophy outright, namely in 1903-4-5. I did not compete the two following years to allow others to come to the front. In 1906 I secured the Cinnamon-marked Trophy, and in 1907 I won the "Amalgamated Yorkshires," 25 guinea Challenge Trophy. In two successive years at the Crystal Palace my birds were awarded 13 firsts, and other prizes, including about 20 cups, medals, and specials, such a record has never been equalled by any other firm or fancier of the present day. The above are incontrovertible facts, and are not wild, exaggerated statements of advertising bluff and bounce to catch the inexperienced fancier. My birds come to the front year by year with the same regularity as one day follows another, thus proving beyond question that pedigree breeding is the royal road to success, as blood is bound to tell. I have bred and sold more noted winners during my career than any other firm. One client alone who had all his birds from me, won in his first season 63 specials and prizes. Further comment would be superfluous. I have for disposal some of the best that money can buy for length, style, position, and quality they cannot be excelled. Cocks, hens, or matched pairs to breed the best, prices reasonable; three days' approval; stamped addressed for particulars.

W. H. SHACKLETON,
South Bank House, WIBSEY, BRADFORD.

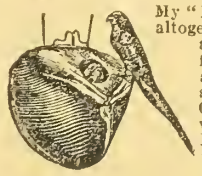
BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.



My "Improved secure" husks are altogether different to any others advertised. Not one year, but for 16 years they have been acknowledged unequalled for successfully rearing Budgerigars Competition and comparsion always increases their popularity. Principal Zoos and parks in the Kingdom use them. CAGE BIRDS says they are "far superior to the old husks." Feathered World says "undoubtedly the new husks are far superior to the old." Exchange and Mart says "they are very superior to the old style which often fall to pieces." They have distinct advantages, and are absolutely unbreakable. Price **4/6** dozen. Smaller quantities **5d.** each. Instructive pamphlet, entitled "Budgerigar Breeding," free on application. Superior Cockatiel box nests, **1/6** each. **HARPER, Adelaide Villa, Dudley Road, WOLVERHAMPTON.**

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at ou risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

March 17, 3 pairs. Winner, 4 score 13; dead heat for 2nd money, 2 score 17. Decider, 4 score 3 and 3 score 3. Singing every night. Linnets or Finches. Free Handicap starting. — Fred. CRABEE, Timekeeper.

YORK.

Usual weekly contest held at Crown Inn, Northstreet, March 28, when 32 birds sang. Result:—1, J. Moore; 2, J. Lee; 3, J. Stothard; 4, T. Masshedder; 5, G. Horwell; 6, T. Lambert; 7, J. Oxberry. Judge, Mr. Perry; timekeeper, Mr. J. Mason.—J. W. SMITH, secretary.

Usual weekly contest was held at Bricklayer's Arms, Palmer Lane, Huugate, March 28th, when 28 birds faced the judge. Some extraordinary good singing was heard with the following result:—1st, 6th, J. Limbert, junr.; 2nd, G. Key; 3rd, M.P.; 4th, R. Harrison; 5th, Chaplin.—Judge, Mr. Jno. Paver. Timekeeper, Mr. James Limbert.—WM. EMPSON.

DARLINGTON.

An open Linnet singing contest in connection with the Darlington C. and B.B.F.A. was held at the George Hotel, Darlington, on March 28, before a good company, when 26 birds competed for two prizes. 1st, copper kettle, S. Hope; 2, silver medal, S. Hope. Judge, Mr. T. Cannon; timekeeper, Mr. J. Cuthbertson.—R. S. BLACK, secretary.

SHEFFIELD.

Linnet singing contest held at Don Inn, on March 29. There was a large attendance, and 17 birds competed. 1, Knight, 64; 2, Booker, 48; 3, Knight, 46. Judges, Messrs. Blackhadder and Watson.—H. TIMMS, secretary.

NEWTOWN, (LEEDS.)

The usual week-end contests in connection with the Prince Albert Inn L.A., during these last eight weeks resulted as follows: Feb. 9th, 18 birds sang. Mr. H. Allen consented to sit with Mr. Jackson as judge in six of these contests. Result: 1st, Sissons; 2nd and 3rd, J. Chippendale. Feb. 16th, 16 birds sang. Judges, H. Allen and B. Jackson. Result: 1st, Sissons; 2nd, J. Chippendale; 3rd, Morris. Feb. 23rd, 19 birds sang. Judges, H. Allen and B. Jackson. Result: 1st, Sissons; 2nd, Neat; 3rd, J. Chippendale. March 1st, 13 birds sang. Judges, H. Allen and B. Jackson. Result: 1st, Sissons; 2nd, W. Hineson; 3rd, Neat. March 8th, 16 birds sang. Judges, E. Wood and B. Jackson. Result: 1st, Sissons; 2nd and 3rd, divided between Sissons and F. Johnson. Contest on March 14th, when 12 birds sang. Judges, B. Jackson and E. Wood. Result: 1st, Sissons; 2nd, Neat; 3rd, W. Hineson. March 15th, 18 birds sang. Judges, H. Allen and B. Jackson. 1st, Neat; 2nd, J. Chippendale; 3rd, Sissons. March 21st, 11 birds sang. Judges, B. Jackson and E. Wood. Result: 1st, W. Hineson; 2nd, Neat; 3rd, divided between P. Calvert and Twiner. March 22nd, 18 birds sang. Judges, H. Allen and B. Jackson. Result: 1st, W. Hineson; 2nd, Chippendale; 3rd, Neat.—E. WOOD, Hon. Sec.

WARRINGTON.

A Linnet singing contest was held at the Alexandra Inn, Scotland Road, 28th March, open to all comers. Some capital singing was heard. Results: 1st, 3rd, W. Leah; 2, F. Hughes; 4, T. Armitage; judges, J. Lawton, S. Leigh; time-keeper, J. Green. Next open contest 11th April. Shilling entries. Singing to commence 2 o'clock.—J. H. MATHER, Sec.

RYHOPE.

Linnet singing contest held at the Toll Bar Hotel, on March 21st, when 42 birds faced the judge, whose awards gave every satisfaction. Winners were: 1st, J. McDonald; 2nd, Turner; 3rd, Walton; 4th, J. Richardson. Judge, Mr. J. Cope. Timekeeper, Mr. J. Mason. April 4th, Mr. F. Ashmore, Queen's Head, gives 12/6 to all entries of 1/- a bird. On April 19th, at the Ryhope Grange, Mr. J. Kirtley will give the following prizes: 1st, a breakfast set; 2nd, copper kettle; 3rd, briar pipe; 1/- a bird and 6d. returned in refreshments.—Advt.

SACRISTON.

Contest on March 7th, at Sacriston. 44 birds faced the judge, Mr. R. Boyd. Results: 1, 2, 3, F. Pullar. Also at Waldrige Fell, March 21st. 42 birds under the same judge. Results: 1, 3, F. Pullar; 2, T. Smith.—R. WHITE, Sec.

LEEDS.

Usual singing contest held at King's Head, Shannon Street, Leeds, on March 28th, when 20 birds sang. 1st and 2nd prizes shared between C. Biss and T. Stead; 3rd, S. Hardenstle. Judges, J. Roberts (Sheffield) and W. Fisher (Leeds). Also March 29th, when the landlord gave four prizes for 30 birds. 1st prize, T. Summers; 2nd, T. Stead; 3rd, D. Clegg; 4th, S. Hardcastle.—Judges, Messrs. Cooper and Crane.—T. SUMMERS, Hon. Sec.

ELSECAR.

The Elsecar L.S.S. held usual week-end contest at "Five Alls Inn," Hoyland, when 15 birds entered. The prize-winners were: 1st, Mr. S. Vaines (3 min. 40 sec.); 2nd, W. Lofthouse (3 min. 35 sec); 3rd, W. Naden (3 min. 15 sec.). Timekeeper, Mr. E. Charles; marker, Mr. J. Denton. There will be a benefit sing held April 4th for Mr. J. Vaines, who was lamed in the mine about eight years ago. Two silver medals and a breeding cage, given by members of the club, will be given for prizes, the sing to be held at club house, Royal Oak, Elsecar, when the landlord will give 5s. Entrance, 6d. each bird.—E. CHARLES, Secretary.

BLACKBURN.

The Blackburn Linnet S.A. held week-end contest on March 28th, at the Old Red Lion, Snigbrook, Blackburn. Prize winners: 1st, A. Cutterall; 2, G. Rostron; 3, G. James. Timekeeper, Mr. Rd. Topping. A general meeting will take place at the above club house April 4th.—RD. HATHURST.

CLUB REPORTS.

SHIPLEY O.S.

Members and friends met on March 17 to hear Mr. S. Dean (Great Horton) lecture on the good and bad points of Yorkshires. Mr. Dean dealt with the subjecting in a good manner, very instructing to young and old Fanciers. Mr. W. Sowden proposed a vote of thanks to Mr. S. Dean for the good lecture he had given. This was seconded by Mr. J. Holroyd and carried.—H. DOBSON, Secretary.

SUNDERLAND C.B.A.

We held our usual fortnightly meeting on March 28th, and a good number of members met together. We elected two judges for our coming show. Messrs. J. H. Roe (Derby), and W. A. Cowgill (Bradford). Then we had an interesting account of the Union meeting held at Newcastle, on 25th March from our delegate, Mr. J. Riseborough. This brought a pleasant evening to a close.—J. COPELAND, Assistant Secretary.

BRIGHOUSE AND DIS. C.B.S.

The members met on March 17, to hear a paper given by Mr. W. Gledhill (Huddersfield) on "Management of Canaries." Mr. Gledhill dealt with the subject in a very able manner, after which several questions were put to the lecturer, and ably answered. During the evening six new members were enrolled. A hearty vote of thanks to Mr. W. Gledhill brought one of the best meetings of the Society to a close.—F. MITCHELL, Hon. Sec.

CAGE BIRD UNION (DIST. NO. 3.)

A meeting of No. 3 district was held at Rochdale O.C. Rooms, March 21st. The delegates present were Messrs. Nadin (Rochdale), Braybrook (Burnley), Lyons (Blackburn), Wilson (Great Harwood), Young (Blackpool), Law (Rochdale Good Intent), Smith (Littleboro'). This being the first meeting for No. 3 district, they decided to elect Mr. Lyons president, and Mr. Law secretary. The object of the meeting was to consider the clashing of Accrington and Rochdale O.C. societies. A deal of dissension took place, and finally the meeting came to the conclusion "That this meeting would be exceedingly pleased if Accrington could see their way to alter their show date, seeing that the Rochdale O.C. have had their show on the same date for 25 years. The next business of importance was the fixing of a centre at which to hold any meetings of No. 3 district, and it was decided that in future all meetings shall be held at Bolton, so as to "give and take" with regard to the travelling of the delegates.—J. LAW

CITY AND SUBURBAN A.C.B.

A strong muster of members and friends, including the whole of the Yorkshire breeders, were present at the meeting at headquarters on Monday, February 24th, Mr. A. C. Burn in the chair. Letters were read from the Secretary of St. Mary's Institute, and Mr. P. Adamthwaite, Miss S. Brookes, Miss Morrison, and Mr. Hopkins were elected members. Mrs. Martin, 14, Oppidan's Mews, Hampstead, Messrs. P. Adamthwaite, 142, Fernhead Road, Maida Hill; R. Brownlie, 5, Vesta Road, Brockley, and H. Robbins, 25, Campden Hill Square, S.W., were nominated for membership. Another silver-plated cup, presented anonymously for the most points in the British Seed-Eating Section, was on view, and was cordially welcomed, a vote of thanks being accorded, to be conveyed to the donor, whoever he was. The report of the delegate (Mr. A. W. Curtis) was taken and adopted, with a hearty vote of thanks for the great services he had rendered to the Fancy at large. (For details of this report, see CAGE BIRDS, February 29). The Chairman then called upon Mr. R. L. Crisp to give his lecture, entitled "A Monologue on the Yorkshire Canary." Questions were asked by Messrs. F. Pullinger, F. Lathlieff, H. Davis, B. Martin, H. Trussler, A. C. Burn, Scott, A. W. Curtis, and B. J. Cooper. The chairman stated that he had not had the pleasure of hearing a lecture by Mr. Crisp before, but on many occasions had listened to him when he had been criticising others. They had listened to much that would be helpful to the Novices in pairing up their birds. Mr. Easterling moved, and it was seconded by Mr. F. Lathlieff, and supported by Mr. Davis, that a hearty vote of thanks be accorded to Mr. Crisp. This was enthusiastically carried. Mr. Crisp, in reply, thanked the members for their vote of thanks and for the generous way they had received him. What he had given them was no idle dogma or assumption; but facts based on pure honest experience, as to the best way to produce Yorkshires. If he had been of any service to them, well, he had been more than repaid.—VICTOR WYNN, Hon. Sec.

HIGHGATE, HAMPSTEAD AND DISTRICT C.B.S.

Meeting held at headquarters, Spencer Hall, N.W., on March 20th, Mr. G. Gardner in the chair. Remainder of rules were passed, and the following show dates fixed:—Young Stock, British and Foreign Birds, July 11th; Annual Show, November 28th; and Pair Show, February 26th, 1909. Judges, Messrs. G. Gardner (young stock), J. Robson (annual), and W. Shakespere (pair). Several names were handed in to become members, who are admitted free of nomination fee up to March 27th; after that date a fee of 1s. will be charged, so fanciers hurry up. At 8.45 p.m., F. B. Kirkman, Esq., B.A., commenced his very popular limelight lecture entitled, "Cock Robin and Co., Limited," to a crowded audience. Many exquisite pictures were thrown upon the screen and explained, when one could gather new ideas and knowledge of bird life. The mode and way in which our friend "The Robin" gets his living, and the dividing up of a certain area of a farmyard or field, which is kept as the private property and feeding ground of each individual bird were explained to us. Other beautiful pictures were of young birds both in and out of the nest. Several nests full of eggs were also shown, and many pictures of old birds feeding their young, also sitting on eggs. One and all were very lifelike, and one could not help reflecting on the trouble, the early morning rising, and the hours spent in taking these beautiful photographs. After a lecture of about an hour and a half's duration a vote of thanks was put to the meeting by our worthy chairman, who spoke a few suitable words expressing thanks for the excellent way in which the lecture had been delivered, and for the beautiful pictures shown to us. The vote was seconded by Mr. Reynolds, and carried by the meeting with an earnestness which showed that one and all were delighted. A vote of thanks was also proposed by Mr. Neal to the ladies, Fancy Press, and visitors present, and carried. Mr. Linn responded in a few well chosen remarks. We were pleased with the good number of fanciers present, also the many ladies, who, we hope, will avail themselves of our various meetings. On Friday, April 24th, a lecture will be given by Mr. J. Robson, "Hints to Beginners."—W. REYNOLDS, Hon. Sec.

MIDDLESBROUGH AND TEES-SIDE C.B.S.

The annual meeting was held on March 14th, at the Crown Hotel. Mr. Swincoe occupied the chair. There was a good attendance of members. The Secretary read the balance sheet of the year's working, which showed a balance of nearly £19. The election of officers then took place. Mr. J. Carr was elected chairman, Mr. T. Gardner, vice-chair, Mr. Barker, treasurer, Mr. Arthur Wake, secretary, and M. J. W. Oliver, assistant secretary. The vice-chairman, Mr. T. Gardner, offered to make stages for shows free of charge, providing the society paid for the timber. This offer was accepted with thanks.—ARTHUR WAKE, Sec.

NORTH MANCHESTER C.B.S.

At our meeting held March 17, Mr. F. Wardleworth (Altrincham) gave a very instructive lecture on the Border Fancy Canary. He told us his method of selecting stock, pairing, rearing, and feeding, and which seeds he had found best suited to the birds, after which he answered a number of questions. Mr. Kenyon proposed, and Mr. Fish seconded, a vote of thanks to Mr. Wardleworth for his very able lecture. At the meeting held March 24th Mr. Bladon (President of the C.B.U.) gave a paper on "Management of the Bird Room." He gave some good advice, and spoke strongly about cleanliness, sanitation, and the need for guarding against overcrowding. After he had answered a number of questions, Mr. Clarke proposed, and Mr. Kenyon seconded, that the best thanks of the Society be given to Mr. Bladon for his advice.—JOHN DAVEY, secretary.

SCOTCH FANCY CANARY NATIONAL DERBY O.A.

The executive have put the membership tickets in circulation for disposal (but not later than May 31st of this year). The show is to be held on September 19th in the Grand National Hall, Glasgow. The cup, which is new and very handsome, is worth winning, and can only be secured by being steadily fought for within the membership. Fanciers who have not received tickets, can have a supply from the secretary. We appeal to all fellow fanciers to develop the growth of the Scotch Fancy Canary, especially Glasgow and district fanciers. Further new members: Messrs. Charles Drysdale (Edinburgh), John Dalgeish (Leith), Frank Ramsay (Tayport), and Robert Carmyllie (Broughty Ferry).—R. WRIGHT, President; J. HOGG, Vice-President; THOMAS SMITH, Secretary and Treasurer, 56, Minard-road, Crossmyloof, Glasgow.

LONDON AND COUNTIES A.C.B.

Drastic Alterations of Rules.

An extraordinary general meeting of the London and Counties A.C.B. was held on March 30th, at headquarters, Mr. F. W. Thorpe, president, in the chair, for the purpose of considering suggested alteration of rules and regulations. The first and perhaps the most important business was the deletion of Rule 17, which provided that the rules of the society made at its foundation should always stand, but that the committee had the power to frame a new rule when necessary. Mr. P. Adamthwaite, who moved that the rule be deleted, said he could not conceive how a body of sensible-minded men could ever have passed such a rule. The laws of the Medes and Persians quailed before it (laughter.) The proposition was seconded by Mr. H. J. Pearce. The Chairman expressed his entire agreement with the proposal and pointed out that the rule was a kind of nursery rule; it did for the first six months or so of the society's existence, but they had now out-grown it (hear, hear.) The resolution was carried unanimously. Rule 18, which provided that the founders of the Association should be entitled to two votes upon all issues, suffered a similar fate, Mr. Pearce proposing, and Mr. Heine seconding its deletion. On the motion of Mr. Adamthwaite (who spoke on behalf of the committee) seconded by Mr. Pearce, it was decided to change the name of the society to the London and Counties Ornithological Association (L.C.O.A.) The mover pointed out that while the title "London and Counties A.C.B." came hard up against the British bird fanciers among its members, the title "London Counties Canary Breeders', British and Foreign Bird Association" was altogether too long. Mr. Adamthwaite moved the revision of Rule 2 to the extent that meetings be held on the third Monday in each month, stating that the committee were unanimously of the opinion that one meeting in each month was quite sufficient. This was seconded by Mr. Pearce and carried. The same rule also now provides that meetings be held at 8 o'clock when necessary. It was proposed by Mr. J. A. Simpson and seconded by Mr. Tringham, that the offices of secretary and treasurer be combined. The Chairman explained that the matter should be considered in conjunction with a new rule which would be dealt with later on. Mr. R. J. Pretty, the secretary, expressed his agreement with the proposal, but hoped the new rule would be passed. The motion was agreed to. It was agreed, on the motion of Mr. Adamthwaite, seconded by Mr. Tringham, and supported by Mr. Simpson, that "A Chairman of Committee shall be elected by the committee from its own numbers. The officer so elected shall retire on December 31st of each year, but shall be eligible for re-election." This was in place of the existing provision that a Chairman be elected at each meeting of the committee. Further financial reform was suggested in the shape of the alteration of Rule 4. Mr. Adamthwaite's proposal, that all candidates for admission to the society "shall sign a form of application with two attesting signatures of members as to the candidate's suitability for election to membership," also carried with it the abolition of the nomination fee of 1/-. To this the meeting did not agree, and it was decided to adopt the suggested wording with, however, the addition of the words "together with a nomination fee of 1/-." On the motion of Mr. Adamthwaite, seconded by Mr. Tringham, the following resolution was carried, viz., "That there be a standing Finance Sub-committee which shall deal with all matters affecting the financial business of the Association, and shall report its proceedings to the committee at least once in each quarter of the year. The sub-committee shall consist of two members elected from the general body of the members and two from the committee. All officers ex officio members." Mr. Adamthwaite, representing the committee, moved Rule 11 should be altered to read—"That any person known to have caused friction in any society, their membership or services shall not be eligible for this Association." This was seconded by Mr. Heine but Mr. Pearce moved an amendment to the effect that the whole rule be deleted, which Mr. Ogel seconded. This, on being put to the meeting, was carried. Other minor alterations of rules were agreed to, and then the meeting was adjourned till April 6th, when the rest of the agenda will be gone through.

THE SHOWS.

LEICESTER C.B.S.

A most successful table show was held at headquarters, Hare and Pheasant Hotel, on March 25th. Some very fine birds were shown. The competition was very keen. Mr. H. J. Chick did admirably in placing the cards, which gave satisfaction. REDPOLL, ETC.: 1, c, Seal (Siskin); 2, Hunt (Mealy Redpoll); 3, Tyler (Twite); vhc, Whitmore (Lesser Redpoll); hc, Heighton (Siskin). LINNETS: 1, Hunt; 2, Moore; 3, Collins; vhc, c, Tyler; hc, Whitmore. BRIT. HEN: 1, Hunt (Bramblefinch); 2, c, Seal (Siskin); 3, Tyler (Bullie); vhc, hc, Sellow (Bunting and Bramblefinch). Mr. H. J. Chick delivered a lecture on the Siskin Redpoll and Twite, which was most ably delivered and was very interesting to the large number of members present. Several questions were put to the lecturer at the close and these were ably answered. A hearty vote of thanks was accorded to Mr. Chick for the able manner in which he handled his subject.—J. A. TYLER, Sec.

AYR AND DIS. C.B.S.

The above recently formed society held their first show, confined to members, on March 28th, in the Wallace Tower Hall, and it proved quite a success, there being an average of about 8 per class in 8 classes. Notwithstanding the afternoon was a stormy one, a good "gate" was obtained, quite a lot of well-known fanciers being present. Mr. Irvine proved a very capable and courteous secretary, and had his arrangements well forward. Mr. P. McQuiston ably made the awards.

MATCHED PAIR CANARIES: 1, 2, Paterson, two pairs of lovely Yorks, well matched, and if lucky to breed a few youngsters they should be heard of later on. MATCHED FOR HYBRIDS: 1, 2, Tait, Goldie-Bullie, a taking pair, very large and steady; Goldie-Redpoll, a nice Brit. Goldie and a very sweet little Lesser Redpoll. MULING PAIRS: 1, Steele, right good little Lesser Redpoll, and a lovely yellow Nor. hen of good type and quality, with a little luck, something good should be produced from this pair; 2, Paterson, Greenie-Canary, likely pair to throw some good mules; 3, Bell, Linnet-Canary, very steady. SINGLE CANARY: 1, 3, 4, Paterson, 1st very smart, racy, well drawn Yorks, with neat head—good wings and tail, wins easy; 3rd, another good Yorks, long, raking stylish bird; 2, McKay, yellow ticked Nor., nice head and body; 5, 6, Cameron. BRIT. A.S. UNMOULTED: 1, sp., 8, Hay, Goldfinch, grand, rich, bright blaze, capital cheeks and collar and good tannings; 2, sp., 4, McCulloch, large-sized good Linnet, will make a nice one when moulted; 4, rattling fine Lesser Redpoll, grand bib and lacing; 3, spl., Robertson, lovely Twite, grand rich colour and markings; 5, Tait, nice Gold; 6, Nason, fine Bullie, rather wild; 7, Conkie. BRIT. A.S. MOULTED: 1, sp, 7, Conkie, Goldie, capital bird, steady as a rock, well up in colour, dense face, fine nut-brown chest, clean cut cheeks, beaming with quality; 2, spl, for best 2nd in hall, Nason. Linnet, nice colour, gem for quality of feather, steady as a rock, nicely pencilled, well staged; 3, Robertson, another nice Goldie, presses winner hard; 4, Hyslop, lovely natural colour Siskin, nice cap and lacing; 5, Ross, good Twite; 6, Frew, good Greenie; 8, McCulloch. MULE OR HYB.: 1, sp, and 3, Doolan, fine big Gold-Mule, rare coloured face, very shapely, lovely quality; 3, dark buff Linnet Mule, fine bold bird, grand shape and quality, well staged; 2, 5, Tait, lovely Siskin Mule, rare good colour and quality, presses winner hard; 4, 6, Ross, both Goldie-Greenie Hybrids, nice face; 7, Hyslop. FOR. A.S.: 1, C. Irvine, now well-known Green Cardinal, staged to perfection; 2, sp, Kerr, lovely pair of Zebrafinches, well staged; 3, sp, 4, Cumming, another pair of Zebrafinches; 4, Pheasant-finch; 5, Tait, Green Budgerigar.

CITY AND SUBURBAN A.C.B.

The Finch Show of last year, which was held on an ordinary meeting night, having proved itself worthy of recognition by virtue of 123 entries being made, was developed this year to a day show, and the experiment fully justified the expectation, there being no less than 160 entries. The show took place at the Church Institute, 60, Paddington-street, Marylebone, on March 21st. Quite the feature of the show was the magnificent Fieldfare exhibited by Mrs. Page, which gained special for best bird in show. The markings and condition of this bird were truly wonderful, and the faultless style in which the bird was staged was a credit to its owner. The honour for the largest class fell to the Greenfinches, which totalled 17, and these gave the judge some trouble to separate. The Goldfinches were not quite so numerous as last year, and several good ones lacked that sheen and polish so much cherished in a perfect specimen. Linnets were good, several old winners having to give way to strange faces. In the A.O.S. class, which numbered 14, the 3rd prize Palace winning Hawfinch captured 1st prize, and was a real gem for size and colour. The Bunting class of 14 contained the whole of the species, which proved most attractive. The winner, a Yellow, was a marvel for markings, colour and steadiness, besides being nicely staged. The two Softbill classes proved very interesting with 11 species, the Blackbird and Thrush pouring forth their melodies as though they were far from the "madding crowd." The two Foreign classes contained some rare birds, the house-moulted winning Japanese Redsided Tit proving very attractive. The weather was all that could be desired, the welcome sun greatly assisting the judge. Messrs. A. W. Hart, W. Shepherd, and F. Wyse threw heart and soul into the work of assisting, which made everything run smoothly and successfully. The attendance was good, including Canon and Mrs. Barker, Messrs. J. S. Clarke, Allen Silver, S. A. Sandy, Sam Cook, C. Prior, R. J. Pretty, J. Goodall, R. J. Watts, and numerous others. Mr. F. Turnber judged, and gave satisfaction.

GOLDFINCH, C.M. (12): 1, spl, Robbins; 2, F. Wyse; 3, Mrs. Page; vhc, hc, Taviner; c, Mrs. Wyse. GOLDFINCH, N.C.M. (6): 1, spl, Adamthwaite; 2, F. Wyse; 3, Mrs. Page; vhc, hc, Mrs. Pile; c, Monger. BULLFINCH (7): 1, spl, Vincent; 2, 3, Francis; vhc, Morrison; hc, Easterling; c, Adamthwaite. LINNET, C.M. (12): 1, spl, Mrs. Pile; 2, Goodall; 3, Taviner; vhc, Marley; hc, Parrington; c, Curry. LINNET, N.C.M. (9): 1, spl, Francis; 2, Parrington; 3, Mrs. Pile; vhc, Mrs. Page; hc, Vincent; c, Miss Shephard. GREENFINCH (17): 1, spl, 2, vhc, Marley; 3, Curry; hc, Robbins; c, Mrs. Page. FOR., SMALL (4): 1, spl (Japanese Redsided Tit), 2 (pair Australian Fire Finches), 3 (Superb Tanager), Miss Shephard; vhc, Mrs. Pile (Madagascar Weaver). LARGE (5): 1, spl (Scarlet Tanager), vhc (pair Pekin Robins), Miss Shephard; 2 (Japanese Hawfinch), hc (Green Crested Cardinal), Mrs. Page; 3, Robbins (Green Crested Cardinal).

BROTTON F.S.

The first show in connection with this new society was held on March 21, in the Oddfellows' Hall. The show throughout was a great success, reflecting the highest credit on all concerned in its promotion and management. The Cage Bird Section, considering the time of year, was especially fine. The competition was very keen throughout, but especially in the British Bird Classes, where many well-known winners were to be seen amongst the cards. The exhibits were nicely staged under the direction of Mr. Halle, the chairman of the society, and came in for much admiration. Quality throughout was excellent, and did credit to the exhibitors. Specials were won by Mr. S. Ware in the Yorkshire classes. The Norwich classes, unfortunately had to be cancelled, there being only five entries in the four classes provided. The management reins were in the capable hands of the energetic secretary, Mr. Wm. Main, upon whom the show reflects the greatest credit. His efforts should be rewarded by an extended interest in the Society's well-being, and an increased entry in all sections at next year's show. Mr. Thomas (Loftus) judged, and his awards gave satisfaction.

YORK. YELL. CK.: 1 and members' special, J. Lines; 2, S. Ware; 3, B. Howe; vhc, W. Rand. BUFF: 1, J. Hodgson; 2, B. Howe; 3, W. Kerr; vhc, S. Ware. TICKED, ETC., CK. OR HEN: 1, spl for best Canary in show, and spl for most points, S. Ware; 2, W. Rand; 3, W. Watmough. MULES: 1, G. Edwards; 2, F. Jones; 3, F. Calam; vhc, R. A. Bugot; hc, E. Hird. LINNETS: 1, spl, Wildsmith and Hawkins; 2, J. P. Stamp; 3, Milburn and Flintoft; vhc, G. Edwards. A.S. BRIT. FINCH: 1 and hc, Rutherford and Bright; 2, Hobson; 3, Wildsmith and Hawkins; vhc, F. Calam.

EVERY EXHIBITOR'S AIM

is for good birds, and to get them he
MUST USE GOOD FOOD.
He has this in . . .

"Woodland Bird Milk."

By using it you will have larger, stronger and better birds.

It is fast superseding eggs in the aviaries of our largest breeders.

The following speak for themselves:—

PRESTON ORNITHOLOGICAL SOCIETY.

This is to certify that the members of the Preston Ornithological Society have this year during the breeding season, and the time of moulting, used upwards of 100 lbs. of your Bird Milk (Woodland Brand) in the soft food of their cage birds, and feel more than satisfied that it is the most suitable ingredient to mix with their soft food.

This year the birds are larger, stronger and possess more vigour than ever before.

Signed on behalf of members. W. Haworth, Chairman; W. Lewis, Vice-Chairman; J. P. Leeming, Treasurer; J. W. Cleminson, Hon. Sec.; J. T. Swarbrick, Assist. Hon. Sec.

October 18th, 1907.

Broughton, Preston. Dear Sirs, I have much pleasure in writing you that the birds I won with in the Yorkshire section at the Crystal Palace Show, 1908, were fed with bread colour feed, and your Woodland Bird Milk. I used no eggs in my bird room all last season.

I am of opinion that one box containing 1 lb. is equal to 60 eggs; this is the opinion of my friends in the Fancy. Yours, etc., C. Blackhurst, M.R.C.V.S.

Buy direct and save middlemen's profits.
Price 1/2 per lb., and postage.

Specially Prepared and Manufactured by—

THE CREAMERY CO.,
GARSTANG, LANCASHIRE.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given each week for the best three anecdotes about birds written on postcards. Competitors must be children under sixteen years of age, and must state from where stories are taken.

Two stars indicate the Winning Contribution; one star the runners up.

**The Drowning Magpie.

We had a Magpie, which I was very fond of. We used to feed him on bits of bread and meat, and sometimes birds. We used to let him run about all day long. He would say "Jack," "Joe," "Rats," "Come, I'm drowning," and "Milk." He used to follow us about a lot. One day we were at dinner, and we could hear him saying, "I'm drowning." We did not take any notice, for we heard him lots of times before. When I went out to look for him I could not find him anywhere. The next day I was going down the garden, and I found him dead in a tub of water.—Jack Osborne (age 12 years), Keswick Villa, Glover Street, Redditch.

*A Friend in Need.

Much tenderness is shown by grown-up birds to helpless orphans in need of their aid. A Robin was seen lately doing a deed of kindness towards a young Starling one bitterly cold morning. The Starling had left the nest, and was sitting shivering in a cellar, whither it had crept, too weak and hungry to fly. In vain kindly hands offered it bread; it refused all food till a hungry little Robin came down on his daily visit to the house and spied the baby bird, sitting on one leg, calling on his absent mother. Off he went, and soon came darting back with a worm, which was gratefully accepted.—Sent by Stephen Murdoch (age 12), 45, Earl-street, Scotstoun, Glasgow.

*Caught in a Sling.

Some time since while a Swallow was flying about a house it caught its foot in a string that was hanging from a pipe on the roof. Of course the bird got frightened at becoming an unwilling prisoner. It struggled and fluttered to no purpose, and when the poor thing was thoroughly tired it simply hung helpless by its leg. Meanwhile its cries had aroused the pity of its Swallow friends, who flocked round it from every quarter. After a good deal of "twitter-talk" among themselves, it seemed as if they at last decided upon a plan, for presently one bird after another struck at the sling with its beak, and after half an hour's steady work they succeeded in cutting it, and in setting the captive free.—Sent by STEPHEN BROWN (age eleven years), 29, William Street, Blairgowrie, Perthshire.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate

J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.

W. P. BARNES, 12, Launder Terrace, Grantham. Judge of Canaries and Cage Birds. Norwich, Crests, Cinnamons, Lizards, Speciality. Life practical experience.

GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. 30 years experience. Terms moderate.

J. BERTIE, The Cottage, Steedman Avenue, Mapperley, Nottingham. Judge of Canaries and Cage Birds; all classes; 30 years' practical experience.

W. G. BULL, 8, Victoria Road, Redfield, Bristol. Judge of Canaries and Cage Birds. Life experience. Terms moderate.

W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over 25 years' practical experience. Terms moderate.

A. G. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.

J. DIXON, 58, King Street, Wigton, Cumberland. Judge of all varieties of Cage Birds. Specialist in Mules and Hybrids.

J. DOBSON, 14, East Road, London, N. Judge of Canaries and all kinds of Cage Birds.

J. W. DRIVER, (Admitt & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.

JOHN FROSTICK, Endlesham Road, Balham, S.W. Expert and Specialist Judge of British, Hybrids and Foreign Birds. 30, years' practical experience.

GEO. GARDNER, 11, Haverstock Road London, N W Judge of all kinds of Cage Birds.

C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow. Judge of Canaries, Mules, British and Foreign Birds.

F. MARWOOD, 1, Barnard Street, Thornaby-on-Tees Mules, British and Foreign; British a speciality. 18 years exhibitor. Terms moderate.

W. R. MILES, The Aviaries, Chichester. Judge of Canaries and Cage Birds. Life experience.

W. MUNDELL, 6, Carlisle Place, Manningham, Bradford. Judge of Canaries and Cage Birds.

H. NORMAN, The Eyrie, Salisbury Road, Carshalton, Surrey. Hybrids and British Birds.

J. NORTH, 435, Oxford Road, Reading. Canaries, British and Foreign Birds.

J. PATTERSON, Chirnside. Judge of Cage Birds All varieties. Wide practical experience. Specialist Border Fancy Judge.

J. H. PAYNE, 17, Northgate Street, Gloucester. Judge of Canaries, British and Foreign Cage Birds.

C. E. SILK, The Aviaries, Emsworth, Hants. Judge of Canaries and all Cage Birds. Life experience.

HENRY TAMS, Orchard Place, Longton, Staffs. Judge of Canaries, British and Foreign Birds. Twenty-five years Breeder and Exhibitor.

S. TICKELL, Bodmin. Judge of all kinds of Cage Birds. Seventeen years successful Breeder and Exhibitor.

R. B. TOPE, Hoe Street, Plymouth. Judge of Cage Birds, Rabbits, Cats, and Cavies. Twenty-five years' experience.

J. WILCOCK, 14, Chapel Street, Eccleshill, near Bradford, Yorkshire. Judge of Canaries and Cage Birds. 25 years Breeder and Exhibitor leading shows.

J. C. WILMOT, 17, Sandhurst Road, Bedford. Judge of Canaries & British Birds. Thirty years' experience

SHOW ADVERTISEMENTS.

Scale of Charges.

SHOW ADVERTISEMENTS, which must be fully

PREPAID,

are inserted in CAGE BIRDS at the following rates:—

¼-inch **2/-**, ½-inch **3/-**, 1 inch **5/-**

If more than 1-inch in an issue is required the charge will be **6s.** per inch and *pro rata*, except to "Guaranteed" Shows appearing in our Dates Fixed column, which are charged at **5s.** per inch and *pro rata*.

SHOW ADVERTISEMENTS across two or more columns 7/6 per inch, column width, except to "Guaranteed" Shows, for which the charge is 6/- per inch, column width.

Secretaries desirous of "guaranteeing" a Show should apply for proper guarantee form to our Manager.

A reduction will be made for a Series of not less than Nine Weeks.

6	,,	3/3
3	,,	1/9
FOREIGN AND COLONIAL—		
12	,,	10/-
6	,,	5/-

On receiving my copy of CAGE BIRDS last week, writes Mr. A. Lazarus (London, W.), I was greatly surprised to find two of my birds (Crests) illustrated on the front page. I am indeed thankful for this very pleasant surprise and the great honour done me. Please also convey my warmest thanks to your clever artist, on whom the picture reflects great credit; it is a very realistic and clever drawing. A little information regarding these birds may be of some interest to you. They were both bred by me, the father of them being a double Crested cock, and the mother a very big green Crest-bred hen. The birds were hatched on May 24th. The clear-bodied bird took 1st prize at a young bird show, 1st at Horticultural Hall show, and 2nd at Nottingham. The other (a saddle back) took 1st at Bristol, 2nd at the Horticultural Hall, and 4th at the Nottingham show. These two birds also won for me the cup, presented by Mr. Rhodes, for the most points received during the year (in the Novice section). I have only exhibited the birds at three shows.

TWITTERINGS.

I think the ANNUAL is an acquisition to the bird fancier's library.—E. M. Lloyd (Pentol).

I had excellent results from my last advt. in CAGE BIRDS, writes Mr. T. Gibson (Battersea Park).

Our open show will be held on October 24, writes Mr. Arthur Wake, Secretary of the Middlesbrough and Teeside C.B.S.

We hear that Mr. Dan Browning will judge the Cage Birds at the Exeter and District First Feather Show on June 4th.

Kindly notify that in future all meetings of the Stockport B.F.A. will be held on Thursdays, writes Mr. W. Stafford (hon. sec.).

We have decided to hold our annual show on the 10th, 11th, and 12th December, writes Mr. T. Vose, secretary of the St. Helens O.S.

All prize-money won in connection with our show, writes Mr. Wm. Main, secretary of the Brotton F.S., has been paid in full.

Mr. Barker Clegg will judge and lecture on British Birds at the Pendleton and Salford O.S. show on April 13, writes Mr. W. Jackson, secretary.

Owing to charge of business, Mr. J. Bowers has been reluctantly compelled to resign his position as President of the Admiral Duncan O.S. writes Mr. W. Healey, secretary.

I have removed from 56 Malden Road, Kentish Town, to 4, Haverstock Road, Kentish Town, N.W., writes Mr. H. Kemp. Allow me to wish CAGE BIRDS every success.

Mr. R. S. Bewick writes that the postmaster general has changed all the addresses in his district from Chester le Street to "S.O., Newcastle on Tyne."

I have been appointed secretary of the Kilmarnock O.C.B.S., writes Mr. Jas B. Y. Murdock, 9 Burnside street, Kilmarnock, in place of Mr. W. Watson.

After April 1st. my address will be 17 Beaconsfield Avenue, Barton Road, Dover. writes Mr G. Sanderson, hon. secretary of the Kent County C.B.A.

I have removed from the Camden Studios, Camden Street, N., writes Mr. F. J. Satchatterton, to "Nithsdale," 34, Elm Park Road, Church End, Finchley, N.

We hear that Mr. Jas. Metcalfe has resigned the secretaryship of the Bramley and Dis. O.S., and that Mr. E. Craven, 37, Whingate Avenue, Armley, has been elected in his place.

Will Mr. Herbert G. Hardy, who sent an order for a book on Tuesday last, kindly forward us his full address, so that the order may be completed?

Mr. A. Brown (Gateshead) has been engaged as judge, along with Mr. W. P. Barnes, at our forthcoming show, October 17th, writes Mr. E. Cowling, secretary of the Morpeth and Dis. C.B.S.

We hear that Mr. Geo. Hill (Greenwich), of the Greenwich and Deptford C.B.S., has resigned, and that Mr. F. W. Hamer, 166, Verney Road, South Bermondsey, is now Hon. Secretary.

We have elected Messrs. W. Vardy and W. Mundell to judge our Open Show to be held on October 9th and 10th, in the Unity Club, writes Mr. George Waddington, secretary of the Great Harwood and District C.B.S.

I had orders from Canada through the medium of my advertisements in CAGE BIRDS, writes Mr. W. Williams (Bradford), which is very satisfactory to myself and speaks well for CAGE BIRDS.

The judges elected for our show on December 10th and 11th, writes Mr. R. J. Truscott, secretary of the Welsh National C.B.S., are Messrs. J. Robson, G. E. Weston, and J. B. Evans.

All claims for prizes in our prize drawing must be made within seven days (from date of publication of next issue), writes Mr. R. J. Truscott, secretary of the Welsh National C.B.S., or they will not be entertained.

Mr. J. Hopkins, of Bolton, will judge our First Feather show on July 25th, writes Mr. R. H. Davies, secretary Leigh and Dis. C.B.S. He will also read us a paper on the Norwich Plainhead on April 7th.

There ought to be some Hybrids bred round Peterborough this season. writes Mr. Sydney L. Cocks, as the "fever" has caught on. I wish CAGE BIRDS another successful year.

Mr. Joseph Reeve, Dover, is the winner of our Yorkshire Challenge Bowl, and not Mr. F. J. Gibbs, Canterbury, as stated in a previous report, writes Mr. G. Sanderson, hon. secretary of the Kent County C.B.A.

The Leeds C.B.S. have elected Messrs. J. Robson and J. Beswick (Stockport) as judges of the open show to be held on November 27 and 28, writes Mr. A. Wilkins, the hon. secretary.

Best wishes to CAGE BIRDS. I was surprised to get so many customers for my moss, and mixed seed advertised in it. I ought to raise the price. I get so many orders through your most valuable paper—J. Tucker (Aldbourne).

The first time I ever put an advertisement in a Fancy journal, writes Mr. J. Hanna (Cork), was last week in CAGE BIRDS. Although only in once my advertisement brought me a number of replies, and my birds were sold quickly.

The Malton F. S. have fixed their 13th. annual show for November 12th. instead of December 26th. (on account of the latter falling on a Saturday, which would make it very awkward for getting stock to and from the show). writes Mr. G. M. Horsley (secretary). Secretaries will please note altered date, and not clash. Mr. W. Mundell (Bradford) will judge the Cage Bird Section. The membership radius has been extended from 5 to 15 miles.

Cage Birds Charts:

How to Judge Exhibition Birds.

NO. 3: THE BULLFINCH.

[See Full-page Drawing and Explanatory Notes on pages 357 and 354 this week.]

A remarkable outburst of appreciative welcome greeted the chart published with our recent Birthday Number, dealing with the exhibition points and failings of the Goldfinch. In response to this, we have decided to issue a series of such charts, so that

EVERY EXHIBITION BIRD

of note may be dealt with in the same helpful and educative manner. In this issue No 3 of the series appears. It deals with the popular Bullfinch, and we venture to think will be even more highly appreciated, if that be possible, than its predecessor. The care and time bestowed upon these drawings by Mr. Norman will be apparent to the most casual eye. To the lover of the chubby Bullfinch, and especially the beginner in exhibiting, the value of the chart is inestimable. He has only to keep it in his birdroom to have always before him the ideal to look for and to buy, while the faults to be avoided can never escape his eye.

Breeders of the various Canaries and lovers of many other species of exhibition birds will, in due course, find their favourites made the subject of one of

CAGE BIRDS CHARTS.

The same great pains will be taken to ensure the completeness of every chart, and its accompanying letterpress, and the deft fingers of our artist will portray the excellencies and deficiencies of the birds with the same precision and clearness. The value of CAGE BIRDS latest feature to the novices and amateurs in our hobby will be obvious to all, and we ask our many kind friends to bring

CAGE BIRDS CHARTS to the notice of everyone interested in Bird-keeping and breeding

Impress upon them that they must on no account miss any one of the series to be issued in the near future, or they will miss a TRULY HELPFUL AND EDUCATIONAL feature never previously put before bird-keepers.

CAGE BIRDS CHARTS may be had beautifully printed on stiff art card, with eyelet holes, for hanging in the bird-room, price 3d. each, post free. The explanatory notes and scales of exhibition points are printed round the margin. No. 1, the Goldfinch, and No. 2, the Yorkshire Canary, are now on sale, and No. 3 will be on sale early next week. SEND YOUR ORDER AT ONCE.

I have taken over the secretaryship of the Oakham and Dis. F.S., writes Mr. J. Hibbert, jr. (Milton Road, Oakham). It is my intention to do my best for our shows, and I hope to receive the support of cage bird fanciers generally.

The Bermondsey and District Fanciers' Association are, writes Mr. A. Lupton, the secretary, soliciting new members for their Cage Bird section, for which they have a silver challenge cup. Membership is open to a 20 miles radius.

I think your CAGE BIRDS charts are grand and a guide badly needed in the Fancy. They are a guide to the old fancier as well as the young beginner, to show what to breed for and what to exhibit.—John J. Brain (Glastonbury).

Wanted, at once, purchasing distributing Agent for London; good discount. Also person to represent Avisine throughout Great Britain, as a side line. Good commission; references required.—Apply Avisine Co., Millom (Advt).

The Cuckoo was heard in the Oswestry neighbourhood on Monday, March 23rd, at about 5 p.m., writes Mr. Henry W. H. Bothamley, of Underhill, Oswestry, to the "Standard." Is not this its first appearance this year?

We learn that at last a Bill is to be introduced into Parliament to restrict the importation of birds' skins and check the rapid extermination of beautiful birds, of which the Egret "Osprey" and Bird of Paradise are typical examples.

The balance sheet of the Berwick-on-Tweed C.B.S., sent us by the secretary, Mr. John Smart, is a healthy statement of accounts, showing a balance in hand of £9 2s. 10d. Great credit is reflected on the officials, and the future of the society bids fair to be successful.

We hear from the Secretary, Mr. O. Mitchell, that a general meeting of the newly-formed Norwich Plainhead Club will be held at the Market Tavern, Godwin Street, Bradford, on April 4, when the adoption of rules and other business will come under consideration.

The Chiff-Chaff I observed this morning, March 20th, about 8.30, in a field of Dr. Palmer's at Millvale, Co. Armagh, writes Mr. E. Harris (Newry) to an Irish contemporary. This seems rather early for the bird in this neighbourhood, as it generally does not appear till April.

While the Lowestoft lifeboat was on a practice trip about two miles out at sea, it is said that a Starling flew into the rigging The bird was exhausted and nearly frozen, but one of the crew warmed it by holding it in his hands, and liberated it when the shore was reached.

At the monthly meeting of the Great Horton Good Intent O.S. held March 28th., CAGE BIRDS Chart, No. 2, formed quite an item of interest, and all members present agreed that the Chart would benefit both old and new fanciers, and that the idea would take a lot of beating. We enrolled another four members, and are, of course, ready to enrol more, writes Mr. H. Schofield, the secretary.

The Lancashire and Lizard F.A. are having a social evening in connection with the presentation to their late secretary Mr. H. Oliver, and (the presentation to the lucky winners of the Challenge Cup and Medals. The meeting will be at "Ye Old Bear's Head." Withy Grove, Manchester, on April 4th commencing at 6 o'clock. I trust that we shall have a good muster, and I extend a hearty welcome to all (whether members or not) in the name of the Association, writes Mr. John Rukin, the secretary.

At the adjourned Annual General Meeting on March 24th, writes Mr. Albert B. Forse, I was duly elected secretary of the Walthamstow Fanciers' Association, and therefore, all communications should be addressed to me at 29, Thornhill Road, Leyton, N.E. I should also be glad to receive subscriptions and ticket money unpaid for 1907.

The balance sheet for the past season of the Green Canary Association reaches us from the secretary, Mr S. Hadwin, and proves a very satisfactory document. After an excellent year's work has been got through, the cash in hand shows an increase from 18s. 10d. in 1907 to £3 15s. 3d. The lengthy membership roll has a very healthy appearance.

The Jarrow and Hebburn and Dis. C.B.F.S. have again engaged the Mechanics' Hall for their show, writes Mr. J. T. Carrick, the secretary. It is undoubtedly one of the best in England for show purposes, there being plenty of light, big windows, and no draughts. It is close to the station, and it could not be better for the show, which will be held on November 27th and 28th. Open judge, Mr. J. C. Barnes (Sheffield); members' judge, Mr. A. Brown (Gateshead).

It may interest some of the gentlemen who met Mr. E. George (who is in the Small Cause Court, Calcutta) at the Dulwich and Peckham C.B.S. Ramble last May, writes Mr. E. S. Lugg, to know that he has resumed his duties again, having had a rough voyage back to India. A consignment of Indian Linnets reached me safely from him on March 23rd. Two are beautiful Rose Linnets, which I hope to have on view at our British and Foreign Table show at Lewisham on May 5th.

Fight in Mid Air.

A desperate fight between two Seagulls was witnessed on March 20th by a crowd of people on the beach at South Shields, according to a daily contemporary. After fighting for nearly half an hour both birds dropped into the sea exhausted, and were drowned.

Southern Yorkshire C.C.

Members please note that the following should have been upon the agenda for the annual meeting on April 10th:—"The question of extending the radius of the club." This motion is being brought forward by myself, as several members are at present residing outside the stated radius.—J. W. RENNIE, hon. secretary.

"AVIARIES, BIRD ROOMS AND CAGES"

Is the title of

CAGE BIRDS' LATEST HANDBOOK.

It is written by that well-known fancier, Mr. H. Norman ("Cage Birds" Artist-in-Chief) who has illustrated it with a wealth of helpful drawings. It also contains 10 lovely full-page photographic plates.

It must be on every bird-lover's book-shelf

who desires to thoroughly understand the proper Building, Fitting and Management of Aviaries, Bird-rooms and Cages.

Price 2 3, post free, bound in cloth, gilt.

Send a Postal Order to—

THE MANAGER, "CAGE BIRDS,"

154, Fleet Street, London, E.C.

Tho ANNUAL is a marvellous sixpennyworth. —C. E. Silk (Emsworth).

New Nature Magazine.

A new monthly magazine for the interchange of knowledge and ideas between all students of nature, and lovers of country life, has just been published. It is called "Country Queries and Notes," and the price is 4d. monthly. The first (April) issue gives promise of a useful career, and of its interest for lovers of the wild life (whether animal, bird, or plant) of the countryside there can be no question. The magazine is very nicely produced, and its illustrations are good and really helpful. The varied nature of the topics dealt with will be realised when we mention that they range from mosses, ferns, and wild plants generally, trees and flowers, beetles and butterflies, to all kinds of animals and birds, and the problems and facts of their existence. We can confidently recommend the purchase and perusal of a copy of "Country Queries and Notes" to all our readers. It is published by the proprietors of the "Country-Side," and its editor is that well-known naturalist, Mr. E. Kay Robinson.

Advices from Sydney state that the Zoological Gardens there are at present particularly interesting to visitors by reason of the inclusion of over 100 rare birds and animals destined for the London Zoological Society's show at the Franco-British Exhibition this summer. These specimens will be shipped for England by the White Star steamer Persic, scheduled to sail from Sydney on April 11th and due in London June 7th.

Bird breeders will view with interest the introduction of a new "soft" food designed for the rearing of young birds, and for the feeding of old birds whenever necessary—to take the place, in fact, of egg-food. The latter, however, has obtained such a hold, amongst Canary-breeders in particular, that any substitute is sure to be viewed with a certain amount of suspicion. But "Woodland Bird Milk" has already been tested by practical fanciers, and found excellent. These breeders say their young birds were "larger, stronger, and more vigorous than ever before" when it was in use. Readers should turn to the advertisement of this food on page 347 this week, and read for themselves. They shou'd certainly send for particulars to the Creamery Company, Garstang, Lancashire.

Polly Got Plucked.

There was a young French lady at the court of King James I. (according to "T.P.'s Weekly"), a Madamo de Choiseul, whose favour was to be won by presents of pets, and one of her lovers became the favourite of the moment through presenting her with a Parrot who swore frightfully but entertainingly. Then she set her heart upon a monkey, for which a rival lover offered immense sums in vain. The rival was in despair till he heard of a monkey who belonged to a poulterer and had learned in his service to pluck fowls with amazing dexterity. "This," thought the rival, "is the very thing." He bought and presented it to Madame de Choiseul, who was enchanted with its engaging ways. The first time she went out she locked the two pets up securely in her bedroom, and immediately upon her return she hastened to entertain herself with them. The monkey was in the highest spirits; but the Parrot? Where was the Parrot? Presently a volley of the most frightful curses proceeded from under the bed, where, indeed, poor Poll was swearing for all it was worth—not without provocation. The monkey had plucked it bare as a new born babe! This incident led to a duel, in which both the above mentioned lovers were wounded

Cage Birds Annual

— For 1908 —

The Standard Guide to the Fancy, IS

A MARVELLOUS SIXPENNYWORTH

—absolutely the best ever put before the Fancy.

LETTERS OF APPRECIATION REACH US BY EVERY POST.

A charming new cover, many beautiful illustrations of winning birds printed on art paper, a lovely coloured plate for frontispiece, a complete revision of all the popular features, and the addition of strikingly useful new features, mark this 1908 issue.

The articles, too, have never been excelled, and both Canary, Hybrid, British and Foreign bird keepers have been specially catered for. The needs of the beginner have likewise been given the fullest consideration.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

Queries will be answered under the following conditions:—

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Caught a Chill.

T.D.—It is quite probable that the bird having caught a chill, the brisk building in your garden has been too cold to allow it to throw it off. You must now keep it comfortably warm, but be careful not to overdo this, as if you keep the hen too warm now you may throw her into moult. See that all draughts are strictly avoided, and do not give cold baths unless there should come a few nice warm days. To begin treatment give as much Epsom salts as will cover a sixpence in the drinking water for two days. Afterwards give twenty drops of whiskey, ten of glycerine, and five of sweet spirits of nitre, in the water for one day; next day give six drops of aromatic sulphuric acid; and on the third day give pure water only. Repeat these last three days over again and again until the wheezing ceases. Feed on Canary seed only as a staple, and give separately a pinch of hemp and rape mixed together, a small pinch of inga seed, and a crumb of sponge cake slightly moistened with sherry, each twice a week. Give a spray of watercress daily. Do not be in a hurry to mate the bird. Let her have a few days' rest to recuperate and get into condition after she seems quite recovered.

A Line from Providence.

Providence, R.I.—Sorry I have not the exact formula of Parrish's Chemical Food by me to tell you what it is composed of. It is a syrup of the phosphates of lime, iron, potash, and soda. You will find the exact formula on every complete bottle of the preparation you get from your chemist, I believe. Still, the formula is of no practical value to you, as you could not prepare the mixture properly yourself, even if it was worth your time to try, which it certainly is not when you should be able to purchase it in small quantities of any chemist for about twopence per ounce. 2. I expect the hen is suffering badly from red-mite attacks. Examine the cage carefully to ascertain the fact. The feathers that have been lost may grow in the next few weeks, but if they are not started by the time you see this reply they will not be reproduced until next moulting season. A twenty-drop dose of the chemical food in the water every second day for two or three weeks would do the bird good. Also give a bath daily in mild weather, and two or three times a week add a little quassia to it. For the egg-eating vice you can do nothing beyond providing a special nest, as described on our novices' page to save the eggs for another bird to hatch and rear. Altogether, I should not consider this hen worth troubling with—certainly I would not breed with her.

We are Seven.

No Name.—1. The fact that your cock Canary bred last year with a hen that was troubled with asthma is not the cause of his now being troubled in that way himself. He has been exposed either to draughts, chills, or damp. Give him the medicine advised to "T.D." in this issue, but omit the preparatory doses of Epsom salts. Also feed as advised in the sage reply until quite well, and see that it is fully protected from any of the above-named causes. You must not think of mating him whilst under treatment; it would be simply courting failure. See remarks to "T.D." on the subject. 2. Yes, the Cinnamon Canary is quite a distinct variety. The cinnamon-coloured markings have been engrafted on to several other varieties—the Norwich and Yorkshire are examples—but these birds are really cinnamon-marked Norwich or Yorkshire, as the case may be, and are not the true Cinnamon variety. The latter is a bird of Norwich type generally, but rather larger, and more stoutly built. Its colour is its chief characteristic feature, and the readiest means of identification. It should be a rich, sound cinnamon colour throughout. 3. Silver sand will not harm your birds, but as it is usually very fine you would probably need to give a little gritty sand in addition. 4. The best way to prevent egg-binding in your hens is to keep them in a sound, healthy condition throughout the winter months by proper attention to food and exercise, and give a pinch of inga seed to each hen twice a week during the spring months. Having done this, and then kept the birds apart until the end of March you would not be troubled with egg-binding. 5, 6, and 7. These queries belong to Mr. Weston's department, and should have been on a separate sheet. Look in his columns for replies. The sample of mixed seeds sent contains far too much linseed and inga for regular use, and the quality is only second-rate.

A Varied Quartette.

"Mac."—1. You do not say what class of bird you wish to breed. As they would be cross-breds in either case I assume you are breeding for songsters, and should advise you to mate the Yorkshire cock with e.m. Norwich hen, as the young will be a much better looking bird than from a mating with the Roller hen. Or you could, if you desired, mate the cock alternately with both hens. 2. You may continue to give a little egg-food to the pair you have mated about three times a week until the hen has gone to nest. Give a little only once a week whilst hen is sitting. 3. The egg-bread you mention is a very useful substitute for the usual home-made egg-food for occasional use when not breeding, but for rearing young I think the genuine freshly-made home-made article has yet to meet with its equal. 4. Of the two samples of seed the Canary is a very nice quality, but very small. Its small size is its only fault. The rape is a mixture, and contains a good deal of wild mustard. I should not care to use it regularly. Am very pleased to know the former advice did so much good for your bird.

Mixed Breeding.

"Doubtful."—You have probably good reason to be doubtful, too, about the success of breeding Canaries in your cage-aviary in company with Zebra Finches and Cutthroats. The probability is that the plan would be a signal failure. To stand any chance at all of succeeding you should devote the aviary entirely to Canaries, and if you did this you would be able to turn in one cock and three hen Canaries, which, with ordinary luck, should succeed very well. You would need to put in five or six nest pans. A clear Buff cock, and a green, a slightly ticked Buff, and a marked or uneven-marked Buff hens would make a good selection. You would not need to mate the birds up separately. Place the three hens altogether in the aviary, and when they and the cock are all in a nice fresh condition, put the cock in a small wire cage, such as a nursery, and hang this cage on the front of the aviary for one or two days so that he may call to the hens. As soon as they are calling freely to each other turn the cocks in to them. A few days later, if the birds have paired, and the hens appear anxious to begin nesting, supply them with nesting material. This course is almost certain to give you a great deal more satisfaction than attempting to introduce the Canaries for breeding amongst the Foreign Finches.

An Epidemic of Sneezing.

"Silliw."—The sudden outbreak of sneezing amongst your birds after having gone through the winter all right is most likely due to cold bathing during the very variable weather we have at this time of the year. Do not give baths except on mild, bright days. Continue to feed and treat as you have begun to do, with the exception of omitting the tolu from the water, and give only the whiskey, glycerine, and nitre—thirty, ten, and five drops respectively—two days in each three, until the sneezing is removed. Also omit the bread and milk, and give instead a small piece of sponge cake slightly moistened with sherry twice a week, and give the mixed seed every third day. The birds probably will soon be all right, and should be quite fit to breed with. But do not mate them up, especially the one you removed to the kitchen, until quite well.

Crested Roller Bald.

A.A.—Is this a new creation, or simply a cross-bred songster? The baldness must be due to constitutional weakness, and perhaps its age is against it; but you say nothing on this point. Try the following treatment for a month and see if the bird appears better then. If not, write again, and mention this reply. You must not, however, expect the feathers to grow again before next moult, as they probably will not. Feed on a mixture of three parts Canary to one part summer rape, as a staple, and twice a week give a little pinch of maw and hemp mixed together, twice a crumb of sponge cake slightly moistened with sherry, and twice a piece of bread the size of a monkey-nut dipped in milk, and with five drops of cod liver oil dropped upon it. Give these alternately, one each day, so as to cover a week with them. Give a spray of watercress daily. Twice during each week give as much Epsom salts as will cover a sixpence, and twelve drops of lemon juice in the water, and at the end of each week give six drops of aromatic sulphuric acid in the water for one day. Let it bathe freely as often as it will do so, but see that it does not get chilled after it. Twice a week you may just moisten the bare place with strong vinegar.

A Premature Start.

Beginner.—Your troubles all arise out of the one fact that you put the birds together before they were ready for mating, and at a too early date. As the cock was singing a little before you put them together it shows that he was freshening up nicely, and at a very favourable time, and had you kept the pair separate until the cock was in stout song, and the hen active, and responding promptly to the "calls" of the cock, even if it had been the beginning of April before this stage was reached, you would have probably been a good deal more forward now than you are. Our columns have been studded with warnings against making this mistake for the last month. You would do well to read up the novices' page for the last few weeks. You can do little now beyond having plenty of patience. As the weather gets warmer they will brighten up and probably go to nest. If they show no signs whatever of starting nesting you may separate them even now for a fortnight or so, and give the cock twenty drops of brandy and ten of glycerine in his water one day, and twelve drops of chemical food the next, and continue giving these on alternate days for a week. Give both birds a leaf of dandelion daily, and continue to feed as you are doing now. Then mate them again when they are ready for it. But should they have begun nesting you must leave them alone and let events take their own course. The best way for you to determine the sex of the Crest is by its song. If it is a cock, when it sings you will see a prominent swelling and throbbing of the throat. In dark Crests the midrib of the Crest feathers is usually a shade darker than the margin in the hen, giving the crest a striped or veiny appearance.

A Case of Over-feeding.

A.C.G.—I think the bird's trouble arises mainly out of an overfed condition. It will probably take some little time to bring it into a good hard condition again. Feed on a staple of Canary seed only; give an unlimited supply of green-food daily, and twice a week give a pinch of a mixture of hemp and rape. Also give twice a week half a teaspoonful of egg-food, with six drops of chemical food well mixed in it. In the drinking give for the first week as much Epsom salts as will cover a sixpence two days in every three. For the next fortnight after that give one day a dose of salts as above, with twenty drops of whisky added; next day twenty drops of chemical food, and pure water on the third day. For a week or two after this you may give twelve drops of chemical food every alternate day if it seems necessary.

Canary Laying.

J.T. (Birmingham).—You kept the birds separate too long after the hen was ready, and it was quite useless putting them together as soon as she had laid her eggs and expecting them to go on nesting in the ordinary way. The best thing you can do now is to give a piece of cuttlefish, remove the nesting material, but not the nest box, and let them come on to nest gradually again, which the hen may do in the course of two or three weeks. Give nesting material again when you find the hen is looking about for it, and seems anxious to nest, which will not be until some days after pairing has taken place. Of course, you may throw away the eggs she laid; they are useless.

Valuing Canaries.

No Name.—If you were really anxious to know the real value of the birds you have bred, I would suggest, as you cannot find anyone to value them locally, that you entered an average specimen at a show in the A.O.V. class. Then, after judging was over, you could write the judge a note and ask if he would oblige you in that direction; or even write a note and ask our Editor to request his reporter at that show to value the bird for you. My opinion is that the bird you bought for a Norwich is a crest-bred bird, which would account for some of the young being crested when paired to a Yorkshire. I do not expect the Crests are quite ideal ones. In any case, your birds would be cross-breds, and only of value as songsters, probably somewhere about 7s. 6d. or 10s. each, according to the singing powers of the cocks. The hens would only do for feeders, value about 3s. each.

Things Went Wrong.

G.W. (Hants).—The birds were doubtless exposed to some chills or draughts, which caused them to drop into moult after being mated. Am very glad to hear that you got over this difficulty so well by consulting back numbers of CAGE BIRDS, and doing as you saw advised therein. Your feeding is bad. To complete the cure of the cock treat him for one week as advised to "A.C.G." in this issue. After that feed him on the usual diet so often recommended here. Canary seed as a staple, a pinch of rape twice a week, hemp ditto, twice a week a little egg-food. When preparing them again for mating give each of the items three times a week instead of twice, and give the hen a pinch of inga twice a week. At the end of the first week's treatment of the cock, give it six drops of aromatic sulphuric acid in its water for two days, and then twenty drops of chemical food every second day for a week.

Bare on Head.

S.J. (Lynton).—As the bird appears in very good health and condition save for losing the feathers on the front of the head, I do not think there is any necessity for stopping him breeding. It is just possible the trouble may arise from badly-placed perches in front of the seed and water vessels causing it to rub its head against the top of the wire holes, or the hen might be responsible for the baldness. In any case, I would not trouble about it now whilst the bird is breeding, so long as it remains as vigorous and healthy as it now is, beyond gently rubbing on the bare place a very little Zambuk ointment twice a week. Give it a tepid bath two or three times a week with a few drops of essence of quassia mixed in it. You may also add twelve drops of chemical food to the water daily for a week, as this will do no harm to the sitting hen. By the way, you mated the birds up too early.

Time for Feeding Young.

H.R.S. (Bath).—When there are young to be fed you should give a fresh supply of egg-food in the evening just before the old birds begin to feed up the young for the night, and give only a small quantity so that there is about enough left at night for the birds to begin to feed next morning. When this is done it is unnecessary to give the fresh supply of food before eight or nine o'clock in the morning as you say, and this is doubtless what the large breeder you mention does; it is the usual course adopted. In the middle of summer the parent birds will begin to feed the young as early as four or five a.m. It will probably take some little time to cure the young crested cock; so persevere. You might try the effect of substituting Epsom salts, as frequently advised in these columns, for the buckthorn, and alternate it with twenty drops of whiskey and as much boric acid as will cover a threepenny piece in the water.

Birds Reeling.

B.G.S.—I am afraid one thing is at the root of all your trouble—the birds are in too fat condition. Treat them as advised to "A.C.G." in this issue for a fortnight, and afterwards give twenty drops of chemical food and six drops of tincture of steel on alternate days for a week or so. The egg-binding is also mainly the outcome of the above conditions, and should disappear after the above treatment. Still, as the season will be getting rather advanced by the time you have finished the treatment, I think you would be well advised to clear them out and replace them with a few good sound, healthy hens. If you do not replace them give your hens a pinch of inga twice a week.

Nesting Diarrhœa.

"A Willing Learner."—Although the fact of several of your fellow fanciers being seriously troubled with this complaint amongst their hens might reasonably throw suspicion upon your water supply, which has undergone some change, you must see at once that if the water was the cause of the trouble you would find it prevalent at all times, and not only during the time the hens were nesting. It is quite possible that something in the food supply may help to cause it. How is your egg-food prepared? Perhaps that may be the cause. If you have still any doubts about the water, boil it before use, and you may rely upon its purity then for all practical purposes. To prevent the diarrhœa, give a small quantity of hemp seed every second day, and on the intervening days, if any looseness is present, give as much carbonate of bismuth as will cover a sixpence, and the same quantity of prepared chalk in the drinking water until looseness is stopped.

When to Colour Feed.

Tom.—German Canaries are not notable for their fine plumage, it is true. You may improve your bird by colour-feeding her at the proper time, but it is very doubtful if you will bring her out as deep a colour as a Norwich, for instance, as the colour is wholly neglected in breeding the birds. You may let her go on breeding until the end of July or middle of August, when you will take the first favourable opportunity to stop her breeding. Then commence to give colour food about the end of August, before she begins to cast feathers, and continue to give it until the moult is completely finished and the bird in fine plumage again. You will see lots of advice in our columns at the proper time how and when to give the colour food. Any good pure brand of tasteless pepper is the proper food to use.

Weakly and Sits Low.

M. Plank.—The Crest cock is evidently in a very weak condition, and may perhaps not be treated the same now as before you bought him. In addition to the usual seed diet give a teaspoonful of scalded rape once a week, and a small piece of sponge cake moistened with sherry twice a week, and twice a week half a teaspoonful of egg-food, with a few drops of cod liver oil emulsion mixed in it. In the drinking water give twelve drops of chemical food one day and thirty of whiskey the next, and continue this on alternate days for a week, when you may discontinue the whiskey, and continue giving the chemical food on alternate days for another week or so.

Brevities.

Waste Seed and Seed Samples (G.G.H.).—A dose of Epsom salts for one day will do the bird good to begin with. After that give him five drops each of tincture of gentian and aromatic sulphuric acid in the water every second day for a week or so, by which time he will probably be all right. Both samples of seed you sent are of fairly good quality, and sweet and clean. No. 1 is of good size; No. 2 is rather smaller; otherwise they are practically equal. On account of its slightly better size, No. 1 is the better of the two samples.

Loss of Voice (A. Gardner).—Give the cock that has lost his voice twenty drops of whiskey, ten of glycerine, and six of syrup of squills in its water two days in every three until better, and give it also a little sponge cake moistened with sherry two or three times a week. See that he is not exposed to any chills or draught. 2. The cause of the birds constantly pecking their bodies is that they are troubled with red-mites. Look up a few back numbers and you will see how to deal effectively with this pest. The other part of your query will be answered in Mr. Weston's columns. It should have been written on a separate sheet.

Canary Panting (J.H.D.).—In addition to the diet of plain Canary seed give this hen a half-teaspoonful of egg-food with five drops of cod liver oil emulsion mixed in it twice a week, and every second day give a pinch of hemp and rape mixed together in equal parts, and a pinch of inga—give first one and then the other on alternate occasions, but not both together. Give a dandelion leaf or a spray of watercress daily. In the drinking water give thirty drops of whiskey, ten of glycerine, and a small pinch of Epsom salts three times a week until better. The sample of Canary is of very fair quality, but is rather small.

Pecks Himself (Puzzled Sister).—If you closely examine its cage, probing any crack or open joint on to a piece of white paper with a pin, you will soon discover cause of your bird's condition—i.e., being pestered and worried by red-mite. Put the bird in a spare cage temporarily, giving daily baths in which a little essence of quassia is mixed, and thoroughly clean and purify its own cage. Saturate joint with turpentine, and paint it all over inside and out with it; place outside to dry, and repeat the operation twice at intervals of one day. Then re-paint the inside, with paint, enamel, or distemper, and touch up and re-varnish the outside. As the bird is probably very weakened in condition, you may give him twenty drops of chemical food every alternate day for a time.

Loss of Song (A Novice).—Beyond saying that you think the bird has lost its song, you give me absolutely no data to go upon. What symptoms has it, if any? Is it mated or unmated? Has it been singing and ceased, whether gradually or suddenly? Is it hoarse, or has it never sung yet? The answers to these questions would be some guide to giving you proper advice. See that the bird is not exposed to draught, and give twenty drops of whiskey and ten of glycerine in the water two days in every three for a week, and give a crumb of sponge cake, slightly moistened with sherry twice during the week. If not better then, write again, and give us the particulars asked for.

Growth Over Beak (Bird Lover).—The small lump on the forehead of your bird is a small tumour. When it is ripe it would be a very simple matter for a veterinary or medical man to remove it, if the bird is valuable enough to make it worth your while having it removed. But as long as it does not seriously interfere with the bird's health, I should not advise you to tamper with it yourself, as you may very easily make matters worse, besides causing the bird much suffering. Try the effect of slightly smearing it with Zambuk ointment twice a week.

Out of Season (J. Hall).—Another colour-feeding query! See reply to "Tom" in this issue. You will begin to feed young Canaries about the end of August, as mentioned in that reply, and about that time you will not fail to find full details and recipes for the process in our columns. The cost of feed will be somewhere about 2s. per pound. This you will learn from our advertisement columns in a few weeks hence, but do not make a point of getting the cheapest you can. Have a good brand, if you have to pay a little more for it.

SOME CINNAMON-MARKED PROBLEMS.

Answered by J. NORTH.

Querist.—In trying to forecast the likely produce from a pair of Canaries, one should be accurately acquainted, not only with their appearance, but with their pedigree, and this is particularly essential in breeding Cinnamon variegated stock. It is also of prime importance to make up one's mind what it is one wants, and not to want too

much, but to concentrate one's energies on one point at a time. You tell me that you "have a pink-eyed clear Buff cock, the father of which is a dark-eyed clear Yellow, with some Cinnamon blood in him; and the mother is a dark-eyed clear Buff." In the first place I must say that it is extremely unusual for a pair of dark-eyed stock birds to produce a pink-eyed son; the Cinnamon traits seem to fall more naturally on the daughters. I am very much inclined to assume, therefore, that your clear Buff cock is not a true pink-eyed bird, perhaps only red-eyed, and that if you pair him with one, or both, of your "two sister hens that come from a well-marked strain, Cinnamon of course," you will get both pink-eyed and dark-eyed progeny, the pink-eyed chicks being hens, most probably. Although you do not say so, I take it that your birds are of the Yorkshire type, and that you want (1) some nicely-"marked" youngsters, either with marking of a dark colour (which they will be bound to have, if marked at all, their eyes being dark), or (2) marks of Cinnamon colour, which must go with pink eyes. If your stock birds are all truly pink-eyed, all their youngsters will be pink-eyed, too; but if either of the parents are dark-eyed, although Cinnamon-bred, the children will be some pink-eyed and some dark-eyed, and unless the Cinnamon blood is strong in the dark-eyed parent you will not be likely to get any pink-eyed sons, for if you want these you must, for certainty, have the pink-eye in both stock birds. Still, you may get some very nice dark "marks," and so you might if there were no Cinnamon blood in the strain. As to how you should proceed next year to mate the progeny of this year, with the definite aim of breeding some good Cinnamon-marked Yorkshires, you will be guided by my foregoing remarks on selection of pink-eyed stock birds. If you want dark marks, pair dark-eyed birds together, but when you require Cinnamon marks, mate two birds that have pink eyes, also having Cinnamon ticked or lightly-marked bodies. If they are pink-eyed, but with no body marks, pair such birds to heavily Cinnamon variegated mates, from an established "marked" strain.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. Weston.

Skylarks Breeding in a Cage.

Bird Lover.—No one could venture to tell you for certain whether or not you would succeed in breeding Skylarks in a cage 5 ft. by 3 ft. by 3 ft. Unlooked-for things frequently happen; at the same time it is long odds against you succeeding. Still, I heard last season of Skylarks being bred in the suburbs of London, in a kind of "rabbit-hutch" aviary (quite small), and apparently without any particular attention being paid to the birds, the old ones rearing the young on the usual soft food. The youngster I saw myself was a proper little chap, and I envied the owner his experience. I believe the facts can be vouched for by several known fanciers. Another instance of the Skylark breeding in captivity (this time in Birmingham) was recorded at length some time ago in Cage Birds. Possibly the manager could find you the back number containing it, if you applied to him. I remember the writer speaks therein of the difficulty he had over maintaining a suitable supply of live food, which apparently he found indispensable. You most certainly should get a house-moulted hen, if possible; a February-caught one would most likely prove quite useless. A good quality stock food, and plenty of live food would be the best incentives to breeding.

Feathers Falling.

Winterman.—Do you keep your birds hanging above the level of the gas, or oil lamp (whichever illuminant you use)? This is a frequent cause of loose feathers, and continuous loss of feathers. Box show cages are hardly the thing for everyday use. Get one ounce of citrate of iron and quinine crystals from a chemist, and dissolve as much as will just cover a threepennypiece in two tablespoonfuls of drinking water. Give this fresh daily for at least a fortnight, but every second day let the birds have plain water in their cages for about an hour. The seeds will not affect matters one way or the other, but you want to avoid mixtures containing a lot of linseed and niger for every-day use. Cracked sunflower, also maw seed, would do good.

Minus their Tails.

E.W.—Nothing you can "give" the birds will affect their tails. It is not a matter which can be remedied by food or medicine. Many fresh-caught birds make sad messes of their tails during their first year in captivity. After their first moult in a cage (when the broken caudal appendage is reproduced in all its glory), it is usually not again damaged, however, because the bird has by then become steadied down. An unsuitable type of cage, though, will often bring about broken tail feathers. Again, some Chaffinches are very unsteady birds, and difficult to keep with whole tails; further, many Thrushes have the same sad habit of spoiling their good looks. If your birds are still wild, then it follows that you will have to get them tame. No doubt the "stumps" of the old feathers still remain in, and unless these are extracted new tail feathers cannot, of course, grow. It may interest you to know that it is an old tale (no pun intended) of many bird dealers and keepers (especially the "old school") that no really good singing Thrush ever has a perfect tail when kept in a cage. "A good-monthed Throstle allus does his tail in," is what I have been assured over and over again by fanciers of this type.

Mating Muling Canaries.

J.C.—You really wanted the yellow (1906) cock to pair back to the mother. But as he is dead that cannot be, and I should run the buff (1907) cock, from the first mating, back to her for one nest, and for the rest of the season run her with a clear yellow Lancashire Plainhead cock purchased from a known breeder (one with a genuine strain). Get a real Lancashire, not a mongrel. The rest of the youngsters I should pair together to what seems the best advantage—that is, select the highest coloured specimens, and avoid using any "weeds." Make as much use of the yellow (1906) cock bird as you can. You could test some of the old hens later in the season with Finches, and should one or another throw light feather to any appreciable extent, take particular care of the young Canaries previously produced by them.

Gold-Crested Wrens, etc.

Ambition.—I gave full details the other week, in reply to "Daulias luscinia," of how the majority of the Warblers may be kept in captivity. Most of the small insectivorous birds require to be fed on very much the same lines (truth to tell, most fanciers find it difficult to command suitable items of diet sufficient to permit of much variation). That the quality of the ingredients comprising the stock food should be good is the main point; the arranging for suitable live food a close second. You are foolish (if you will pardon me using the word) to try keeping Gold-crested Wrens when you have had no experience of Softbills. They are admittedly among the most delicate and "ticklish" customers the bird-lover can tackle, and that you should have already lost two or three "within a day or so of capture" is only what one might expect. One I had myself I fed at first mainly on preserved houseflies, with one or two late-caught flies I was able to get ants' eggs of best quality soaked in milk, drained, and rubbed amongst yolk of egg, or with a pinch of Plasmon powder sprinkled over (later, mixed with a little good insectivorous food), and small, well-scoured gentles. In the summer I gave live ants' eggs, aphides (green-fly) off geraniums, and other greenhouse plants, rose trees, etc., likewise house flies captured in the "balloon" type of trap. Flies are much appreciated when released into the cage with a wing pulled off, to ensure the bird getting at them (I hope this won't offend anyone's susceptibilities). It is astonishing what large "consumers" these tiny mites of birds seem to be. For mealworms they are not particularly eager, though very tiny ones get eaten, and a few "squeezed out" amongst the food are always valuable. But you want to gain some experience before attempting Gold-crests. Many insectivorous birds are easy to keep; some very much the reverse, however.

Brevities.

All Together (W. H. Harris).—In a room of the size you mention, the birds named should do very well flying loose. But you have not a sufficiency of hens. I advise you to take out the cock Bullie and turn in two Bullie hens, and three more Norwich-type hen Canaries. Put up at least twice as many nest-boxes as you have hens.

Concerning an Aviary (Lex).—Your questions are of two wide a scope to be dealt with satisfactorily in this column. You should get Mr. Norman's book on "Aviaries," which has been specially written to help bird-lovers in your position. The best "mixture" I could advise you to turn in during the first year would be one dozen hen Canaries, half-a-dozen hen Bullfinches, and a selection of the following cock Finches:—Gold and Green, Siskin, Linnet, Redpoll, and Twite. From these you would be certain to breed some youngsters, I should say. No doubt my friend, Mr. Page, could recommend you a few suitable Foreign birds.

Linnet and Redpolls (Socrates).—The diet you mention should be quite sufficient to get the Linnet in proper breeding condition. Try him with dandelion and shepherd's purse, likewise chickweed, and I'll wager he won't say no, especially if in seed. You can keep the Redpolls in the cage together from now onwards, though they quite likely will not attempt breeding operations until another month at least has passed. One of my hens built in an ordinary earthenware nestpan; but most prefer a wooden one. There is no difficulty once they set out to "keep house." Give the seeding greenfoods freely should young hatch out: I noticed then my own old birds visited the soft-food, and pan of ants' eggs, which stood in the aviary.

In Conservatory (Malvern Wells).—If the temperature in the conservatory is not too variable and sultry, the couple should do well. You could turn in the Goldfinch as soon as you see the hen Canary flying about vigorously flapping her wings and carrying bits of nesting material in her bill. The hen ought to be a very suitable one. By-the-way, a height of seven feet seems very curious for a place only two feet long and broad; half that height would surely be better. Are the dimensions correctly written down, though? Don't turn in the Goldfinch until the hen is ready.

Foot Trouble (G.C.W.).—From your letter I should say the trouble is due to the Bullfinch's claws being too long—most captive birds require them cutting occasionally. This would explain him getting "hung up" in the wires of the cage. To trim them is an easy matter, providing one handles the bird firmly but gently, thus obviating struggling, with the possible resulting fracture of a wing or leg. With a sharp pair of scissors (or finger-nail cutters) cut away the incurved portions of the claws, down to within about three-sixtcenths of an inch of the toe in the back and middle front claws, and a quarter of an inch in the outer front claws. That would be about a safe distance. If cut too close up they will bleed; then, of course, the operation becomes painful to the bird—but only then.

FOREIGN BIRDS.

Answered by Wesley T. Page, F.Z.S., M.B.N.H.S.

Grey Parrot Ailing.

E.P.—I fear one bird has contaminated the other, and I am very doubtful as to the result. You cannot do much else than keep the bird warm and quiet. Dinneford's Magnesia is a much safer aperient than castor oil. Give the bird, on alternate days, three doses of six grains each of sulphate of soda and chlorate of potash dissolved in two tablespoonfuls of water, this mixture forming its sole drinking fluid for the respective days. Continue the glyco-thymoline daily for a time. I thought I made it quite clear in my previous letter that milk sop in any form is very dangerous for Grey Parrots, and should only be given till you can get it accustomed to other food, that is, the seed mixture, ripe fruit, etc. As soon as this bird is taking sufficient of the seed mixture stop all soft food—till such time, boiled maize is a much more wholesome diet than milk sop. If the bird survives the next 10 days, you had better write again giving full details. You must not use a cage which has contained a bird suffering from septic troubles for another bird till it has been thoroughly sterilised.

Amazon with Cold.

S.S.W.—Mix a few chillies with its seed mixture, and do not try every remedy you hear of; spray its nostrils daily with glyco-thymoline for a week, and put one teaspoonful of the mixture given below, in two tablespoonfuls of water, which should be sufficient for a day's supply. Do not leave it in the cage. Offer it at intervals 3 or 4 times a day. Do not give bread and butter or tea sop. As you are a new reader I repeat diet for your benefit. Seed mixture: Canary seed, oats, hemp, dari, small maize and sunflower seeds, double the quantity of the two former to those of the following kinds. Well mix and always keep a supply in the cage. Also give, to vary the diet, ripe fruit, plain biscuit, little boiled potato (dry), stale crust of household bread, nuts, and cuttlefish, this last a continuous supply. For one day soak one teaspoonful of Dinneford's Magnesia into a piece of biscuit or stale bread, and when partly dry, give it to the bird, who should eat it either dry or moist. Mixture: Ipecacuanha wine, oxymel of squills and glycerine in equal parts.

When to Buy Grey Parrots.

A. A. A.—A grey Parrot is always more or less of a risky purchase (that is, a newly-imported bird), owing to the conditions of importation causing them to arrive in a very debilitated condition, and of course it will be obvious that during warm weather would be the best time to procure same, less risk of taking a chill on the journey and more chance of recovery from the hardships of importation. Apart from this, one time is as good as another. The safer method is to buy an acclimatised bird, paying of course a higher figure for same, but see that you get such. Keep your bird where it will hear plenty of conversation, see that it is not irritated, and as soon as it is accustomed to you also teach it by constant repetition. It should soon begin to pick up a few phrases and in the end make a good talker. Feed as advised regularly in this column, and do not give any tea, coffee or milk-slops or any kind of animal food.

Budgerigars' Soft Eggs.

Beginner.—It is full early for breeding as yet, and your birds are evidently in none too robust a condition. Your diet is alright, but as soon as you can procure grass in the ear free from frost, let them have a liberal supply. You cannot give them too much of this, and you will find they will eat it readily enough. The seeds of nature grasses constitutes the greater portion of their diet in a state of nature. Get some old mortar rubbish, crush it and sprinkle some over sand tray daily. I expect you will find them ready enough to eat a stale crust of household bread or piece of plain biscuit. For one day soak a piece or either in a teaspoonful of Dinneford's Magnesia, and when partially dry see that the birds eat it; follow this by giving them daily for a time 10 or 12 drops of Parrish's Chemical Food on either a piece of stale bread or plain biscuit. As soon as they are fit, there is no doubt you will have the satisfaction of seeing young reared.

Painted Finches.

Shama.—This can soon be told; very little is known about them in captivity. The late Herr Weiner possessed them, but they did not live long, and in 1906 (I think) the London Zoo had a pair; at least, during that year or the preceding one I saw a pair there, but these, again, did not live long. I do not know definitely of other aviculturists having possessed any. I am trying my luck with a pair of this present consignment, and hope to keep them at any rate long enough to gather some facts concerning their life history. Their present advertised price is £5 a pair. Treat them much as you would Gouldian Finches, but give them plenty of spray millet and insects, mealworms, blighty foliage, etc., also a few ernshed oats if they will eat them and a liberal supply of grass in the ear; however, you must be sure that the latter is untainted by frost. I should give them a roomy cage to themselves at first, but should think when acclimatised they could be kept with the others, providing they are not over-crowded. When over-crowded amiable birds become morose and pugnacious.

Companions with Budgerigars.

"**Aigburgh.**"—You do not now tell me the size of your aviary. If you have space you can put in Cockatiels, Madagascar Lovebirds and Roscila Parrakeets, with your Budgerigars; they will agree altogether, and on a mixture of Canary, millet, a little hemp, and sunflower seeds and oats, with greenfood, cuttlefish, water, etc., should thrive and do well. But do not overcrowd. Either of the following will do well, and breed in your box cage. Zebra Finches, White Java Sparrows, Cutthroats, or Bengalese. Perhaps you would find the White Javas the more interesting. There was a very useful seed hopper figured in either the last or preceding issue of Cage Birds, but for myself I always use flower pot saucers. I cannot give names, but one of our prominent advertisers under "Foods" supplies the Sanitary Fountain.

Another Parrot.

T. H. C.—Your bird is a Blue-fronted Amazon. Plumage has nothing to do with talking capacity; this varies much with individual birds, but the Blue-front as a rule makes the most talented talker amongst the Amazon Parrots. I should say you have a young bird, and that it would turn out all right providing you are not giving it messes. You will find the correct diet given in reply to S.S.W. in this issue, and as your bird has evidently got a slight cold, a dose or two of the mixture recommended in same reply would be beneficial to your bird. Spray its nostrils once or twice a day with glyco-thymoline till the running ceases. Keep out of draught, but let it have plenty of fresh air. Do not give tea, coffee or milk slops or any kind of animal food. Give it one teaspoonful of Dinneford's Magnesia soaked into a crust of bread or piece of biscuit, repeating same after a three days' interval.

Treatment for Mynah.

H. Adams.—The bird is about the size of the English Crow, and of course will need a cage in proportion to its size. In a state of nature these birds are almost entirely fruit feeders, and in captivity should have a liberal supply of ripe fruit, live insects such as mealworms, beetles, smooth caterpillars, etc., some good soft food mixture, and such table scraps as it will eat. These birds both talk and whistle; of course, for talking they must be trained, and a talented bird is a treat indeed, its voice being more human than that of the Parrot. One at present at the London Zoo is very talented, and utters very distinctly: "What are you talking about"—"I'm surprised at you"—"Come a bit closer," etc. Make a companion of the bird, and it should well repay you for the trouble. From the nature of its food, its voidings are very loose and frequently ejected outside the cage, so provision must be made against this if the bird is kept in a living room.

Ringing Cockatiels, etc.

"**Grimston.**"—Personally, I have not followed the practice of ringing Cockatiels. It should be done as early as possible, while the joints are supple. The method of doing so is to bend the two hind toes straight back against the leg. There is then no difficulty in passing the ring over the toes to the leg. Its diameter should be a trifle larger than the leg of the adult bird. If you state what you require them for, any supplier of cage fittings and sundries will send you the suitable size (see advert. column). *Re* seeds, I can only say I have replied to all such queries that reached me. If you will send fresh samples I shall be pleased to report on same. I do not think the Redrump will breed this season, but should do so next.

What Parrakeet?

A. G. Beeston.—Your birds are a pair of Madagascar Lovebirds, the one with the grey head is the male, the all green bird being the female. These pretty birds are also known as Grey-headed Lovebirds, and occasionally as White-headed Lovebirds. These birds require much the same treatment as Budgerigars—Canary, white, French and spray millet, with a few oats, little green food, cuttlefish, grit and water for drinking and bathing. They differ from Budgerigars in one respect, in that they usually line their nest box or husk with strips of bark, etc., and live sticks with the bark still on should be supplied for them to strip off for nesting purposes; even if they should not breed this would supply them with exercise, and this is a very potent factor in keeping captive birds in a generally healthy condition.

Brevities.

Budgerigars ("Keemo"). — 1. It is only a common variation, which is also more or less common with all species. The more likely sign of age would be thick horny scales on the legs and feet. 2. It is only exuberance; probably he is very fit, and wishes to induce his mate to think of nesting arrangements. 3. This confirms my reply to query 2, and within a few days you may expect eggs, and in due course if all goes well, young ones. Do not be too curious and interfere with them too much. Full details have been given as regards treatment, and you will find useful data if you read other replies in this issue. Wish you luck.

Budgerigars (A. Sharp).—Put in another husk at opposite end of cage; it is difficult to give a reason, save that birds are like humans, some individuals being very wayward. Leave them alone; don't be curious, and they should settle down all right. I presume mice do not enter the cage and disturb them. There is plenty of time; the season is early yet, and once they begin to breed they will continue right up to the moult. Note other replies.

Budgerigars (Novice).—Note other replies in this issue. They only require husks for breeding, and they do not require any nesting material. Diet: Canary, millet, and spray millet, a few oats once or twice a week; greenfood, lettuce and grass in the ear, cuttlefish and grit.

Budgerigars (M. L.).—I should say the pairs are interfering with one another, or else mice are in the aviary. If it is neither of these causes I should leave her alone for a time and she will probably settle down soon. It will be ample time, if they do so in the middle of next month. It almost appears as if the hen was egg bound; if so, by the time you see this answer she will either have got rid of the eggs or have died. The preventative of egg binding is plenty of crushed egg-shells and mortar rubbish mixed with the bird's sand. Note other replies.

PARK & LAKE AVICULTURE

Answered by Frank Finn, B.A., F.Z.S., M.B.O.U., etc.

Silver Pheasants with Cankered Legs.

T.J.D.—I don't know exactly what you mean by "cankered" as applied to birds' legs, but I expect it is "scaly-leg," a disease caused by a parasitic mite. It is infectious—at any rate, to birds closely allied to pheasants (such as fowls). Wash the legs with soap and water and a brush, and then anoint with paraffin, continuing this until they appear clean.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Roller (Daisy).—Septic inflammation of liver, lungs and bowels.

GENERAL.

Answered by The Editor.

Heating Apparatus (E. Wear).—Thanks for letter and sketch, which we shall hope to publish next week.

Paper (F. Allen).—We are much obliged to you, and hope to be able to print paper in next issue.

A Food (Breeder).—Send a letter in a stamped envelope, and we shall be pleased to address it to Mr. C. E. Brown, and have it posted.

A Cage (J. Bunt).—We shall be pleased, on your behalf, to take the matter up with the advertiser if you will conform to rule 8. We could not think of publishing a letter which would only serve to cast aspersions on every maker of cages in the same town.

Show Dates Fixed (H.E.P.).—You are quite correct; the terms for inserting the date and name of a show, with the judges initials, in our "Show Dates Fixed" column, remain the same as last year, viz., a guarantee to spend not less than 25s. in advertising the fixture in our columns has to be forwarded to our manager, who will send a guarantee form an application. We have had a form posted along to you.

Essay Competition (N. Bourne).—The task of weighing the merits of the essays properly and carefully has proved a very lengthy one, but it is on the verge of completion, and the result we hope to announce next week.

Letter (H. Woofiner).—You letter has been duly forwarded.

The Scotch Fancy and Belgian Canaries (J. Harrison).—Thanks for your letter, which we shall hope to publish next week, with sketches; no time to prepare the latter for this issue.

A Goldfinch Deal (J.J.B.).—We really cannot see what satisfaction you could get out of the publication of your letter. Do you not think it would only serve to throw every Fancier in the district mentioned under suspicion? If you will conform to rule 8 he can be written to on your behalf. Further, you have a clear remedy in the county-court; also, as you yourself remark, a protection in future in our deposit system.

Dead Bird (G. Edwards).—A bird on approval remains the property of the seller until it is approved (accepted) by the buyer. Failing any special arrangement to the contrary, the transit risks are the seller's. Receivers of birds should always examine them on arrival, and sign on the railway company's delivery sheet, "received dead," if that be the case, showing the dead body to the railway company's servant.

Food (Tom Gray).—We will endeavour to ascertain the name for you.

Notes (S.W.B.).—Very pleased to hear from you any time convenient. Thanks.

Circulating Back Numbers (F. Thomas).—Accept our hearty thanks for distributing specimen copies. This is the sort of help we appreciate.

Hybrid Breeding (E. Lindens).—You will find a very helpful article on Hybrid Breeding in the "Annual" this year.

Suggestion (John Kay).—Thanks for your helpful suggestions, which we will give the fullest consideration and adopt if possible.

CORRESPONDENCE.

THE CUCKOO IN MARCH.

SIR,—According to the "Spalding Free Press" of date March 30th, the Cuckoo was heard several times in this district during the past week. Is not this rather early for him to make his appearance, especially as the weather has been anything but springlike during March? W. R. MURRELL.

STANDARD SHOW CAGES FOR BRITISH HARDBILLS.

SIR,—I am very pleased to see so many oppose the style of new cage proposed. The present pattern is better suited, and gives the working man a hobby in his spare time. But at the same time I would like to see a standard colour, instead of the blues and greens now seen in each class. It would be an improvement, and would look far better than at present. So if there is to be any alteration, then let it be in the colour.

WELSH FANCIER.

SIR,—In reply to Mr. L. J. Arrighi requesting the name of "Well-Wisher of the S.B.B. and M.C.," for the benefit of exhibitors of British birds and your numerous readers, I thought it would be wise to have this question discussed through your valuable paper, but I never for one moment intended to "insinuate" concerning Mr. L. J. Arrighi in any shape or form, but to give my opinion. I beg to congratulate him on the step he took to propose such a proposition at the National B.B. and M.C. meeting. But when reading the account I thought that he might have started at home, rather than cross the Border to propose what he is (or was) strongly opposed to in connection with the Scottish B.B. and M.C. I would like to ask Mr. Arrighi when and how his conversion to the standard show cage came about, and I still remain a "well-wisher of the S.B.B. and M.C." RICHARD GADSDEN.

NEW SOCIETY FOR HARRINGTON AND DISTRICT.

SIR,—On Monday evening last a meeting was held in the Temperance Institute, Harrington, for the purpose of considering a proposal to form a cage bird society (also for poultry and pigeons) for Harrington. Mr. Joseph Storey was voted to the chair, and there was a good number present. The question of forming a society was thoroughly discussed. As there are a large number of fanciers in the district, it was generally agreed to form an association with Harrington and District P.P. and C.B.S. as the title. The following were elected pro. tem.: Mr. W. Irwin (Ellerslie), secretary; and Mr. Armstrong, treasurer. The election of other officers was deferred to a further meeting. It was resolved that a show be held the last week in October, and those present pledged themselves to further the work as much as possible. W. IRWIN.

WHERE DOES THE COLOUR COME FROM?

SIR,—In reply to Mr. Jenkins, I was not there when the noted buff actually changed hands, but Mr. Thompson and I were given to understand at the show that the bird was for sale, and were told at the show how it was bred. We could not wait to see Mr. Jenkins that night, so it was arranged to come over next day; also Mr. Thompson and I arranged between ourselves to buy the bird, Mr. Thompson having first claim, myself second. I am sorry to say Mr. Thompson never gave me the chance. It was a rare bargain indeed. Well, Mr. Jenkins, during the coming season I sincerely wish you may breed a dozen like him; he was a credit to you. Now, "Past Novice," respecting the old hands using Cinnamon blood. It is very funny they all speak against it now. I should still be pleased to hear of the bird that has won so much. Is it the yellow or the buff cock? You are still mistaken about the yellow hen at the Scottish National; however, that's a mere detail, for we can all make slight mistakes. I have always said she is the best Green hen that has been bred. The above birds were bred, I consider, in the Liverpool district, and "Past Novice" knows this well. They have indeed been good bargains for their owners. But where the point rubs is this: The men who bred them are exhibiting Norwich Greens, so I should have thought it would have been policy to keep them. However, everybody knows his own business best My aim has also always been to help the novices; they are the backbone of the fancy, and we were all novices once. I reciprocate your kind wishes, "Past Novice," for the coming breeding season. I hope we shall all breed one "topper" each, and that before the end of the season I shall have the pleasure of meeting "Past Novice" again to continue the discussion again over a drop of old Quickly Irish. J. W. METCALFE.

MULES AND HYBRIDS: WHAT IS THE DIFFERENCE?

SIR,—After 35 years of bird breeding, I was taken all aback and very much surprised when I read a letter from one of your readers, who states there is no such thing as a Mule bird—they are all Hybrids! Now, I have always been under the impression that with a Canary paired to a Britisher, the produce are Mules, but when two different kinds of British birds are paired up, the produce of the same are Hybrids. Will someone kindly give me an opinion on the subject?

L. C. NICHOLLS.

SIR,—The Dudley show classification dispute appears, from T. Johnson's letter, to be drifting into the question of: What constitutes a Mule or a Hybrid? I think the N.B.B. and M.C. or the Cage Bird Union ought to decide this question. They might get the opinion of Mule and Hybrid breeders, also that of judges, so that novice exhibitors will know how to enter their birds, and also to inform show committees how to word their schedules. In my opinion Canaries are Hybrids. Tree Sparrow-House Sparrow and Bramblefinch-Chaffinch I know to be fertile Hybrids; and I think if breeders of other crosses saved their hens they would quite likely find some other fertile Hybrids. But I believe that all crosses from the Bullfinch are undoubted Mules; I have never heard of a hen from this cross even laying an egg. Show committees might have two classes—one for any variety of Canary Mule, the other for any other variety of Mule or Hybrid. Where there is a probability of many oxhibitors, these classes could be further divided. J. H. VERRALL.

THE HANDLING OF CAGES AT THE SHOWS.

SIR,—Mr. L. J. Arrighi, in his remarks regarding his winning Siberian Goldfinch, in your issue of March 21st, touched on a point that I think should be considered by all show officials, viz., the handling of show cages by visitors at shows. I noticed on several of my visits to shows last season that it was a very common practice. Now, if it is an experienced fancier that is handling the cages it's not bad, as they take more care not to spill the water out of the drinkers, and then walk away and leave the latter empty, nor will they poke at a bird with a pencil or pocket-knife to make it show its points. I have seen cages knocked down on to the floor through this evil of handling the cages. I admit that birds of the Scoteh Fancy class require to be handled, but is it necessary to handle any of the rest? In my opinion it is not, as after the judge has put them in their places they should remain there till lifted by the owner or show officials. Then they would be in better fettle for showing, say, the following week. A few placards posted up with the words, "Visitors requested not to handle cages," would help to stamp out a bad habit. I would like to hear other opinions on this subject.

JNO. KILPATRICK.

HOW TO TAME WILD BIRDS.

SIR,—In *The Scotsman* of recent date, Francis Irwin tells how to succeed in persuading the small garden birds who come for crumbs to advance to the further intimacy of taking the crumbs from one's hand. The writer says that whoever tries will find the Robins the aptest pupils to begin with. The *modus operandi* is as follows: When the birds are assembled near him he should drop the crumbs closer and closer to his feet, till the birds are within a few inches of his boots. The next step will be to lay the hand, well spread with crumbs, flat on the ground. It will not be long before a venturesome robin picks a crumb from his finger-tips, and then, emboldened by success, remains to feed steadily, finally perching on the hand while eating. The spell of shyness once broken, other birds will follow the Robin's example. Soon it will be unnecessary to keep the hand on the ground, as the birds will learn to fly to it the moment it is outstretched. These preliminary lessons are best conducted in frosty weather, and best of all when the snow covers their food supplies and hunger drives. The substitution of walnut crumbs for bread produces much more satisfactory results. So fond do they become of this food that they will prefer it to insect food in summer, and I have often seen them feeding their young on walnut, sometimes taking it from the fingers while seated on the nest. By the above methods I have succeeded in taming the birds in a large garden to such a degree that members of six species perched on the hand for food. These were Robins, Chaffinches, Hedge Sparrows, Great Tits, Blue Tits, and Cole Tits. Of these, all the Robins in the garden, to the number of about eight to ten, and about the same number of Chaffinches, learnt to fly up and take walnut-crumbs from between my lips.

GEORGE SMART.

ROLLER CANARIES AT THE PALACE SHOW.

SIR,—Mr. Norris in last issue states he is quite willing to answer my questions. Well, readers, I ask you to put the latter side by side with his answers, and I think you will agree he has not done so, but, by taking extracts from them, has got away from the points at issue. He has done the same with all my letters, and made many false and misleading statements. In the first place, I have never had any offer to accept my challenge, which, as I pointed out to Mr. N. in my letters, had nothing to do with either himself or the B.R.C.C., and as Mr. N. refuses to give the name of the supposed member who did offer to sing my two young birds for the benefit of the club, I shall refuse to believe that anyone has ever made an offer at all, or yet put any money down. When my challenge appeared in the press I suppose Mr. N. took it upon himself to boastfully state he had "no doubt several members would oblige if I meant business." So I sent £5 to him asking him not to make this into a case of Whittaker versus the B.R.C.C., but to let the members write to me, and when Mr. N. found he had no one to cover the money, he, of course, wanted an excuse, and found one in making an offer which he knew quite well I could not accept. This offer is the only one I have ever had, and read: That the member who has taken up your challenge makes you his final offer that you send your birds up to the meeting on Tuesday next, and pick your own judge, the loser to pay the money to the funds of the club. How in the world could I do this? I might have picked a man who was not present, as I know it would be something new if more than four or five attended. Well, on seeing what an unreasonable offer this was, and knowing how one-sided Mr. N. was acting, I sent him a postcard saying I thought we had better let the whole thing drop. Now Mr. N. makes the false and misleading statement that I "backed out of the matches," a falsehood in many ways, as, although the birds are sold and at present with hens, we are still very anxious to go on. Again, no one has ever made an attempt to make a match, unless Mr. N. calls an offer to sing for the benefit of the club a match; I don't. He also states that I agreed for him to arrange the matches, and offered to sing for the benefit of the club. Another false and misleading statement. It is true that I did offer £20 to £5 for the benefit of the club if my bird sang as reported, and I gave them a full week to accept it, but, like wise men, they did not. You say I altered the conditions by stating that if the two-bird match was not taken up the one-bird match was off. Read my challenge in CAGE BIRDS again and you will find this is another misleading statement. But I am sorry to say I must alter the conditions now, and also bar Mr. Norris, as, judging by his unfair and one-sided views, I should not consider the birds in good hands. Concerning the Gluck birds, I am not bigoted against any bird that is good and pure in song. But I have yet to hear a Gluck bird that is not faulty in song, and on referring to my answer to your letter on this subject I see this is another of your ways of evading the point, by giving extracts from my letters which meet your ends so as to throw quite a wrong light on the subject. For the benefit of your readers, sir, I hope you will publish my reply in full. Mr. N. stated in his letter to me: "You seem to forget that the Gluck has an extra tour, etc." Copy of my reply: "About the Gluck birds, I must say I am surprised at your remarks, as you know I have been studying the Roller's song for the past seven years. You also know that I have attended every Roller contest that has been held this season for the purpose of listening to the Gluck birds, and have spent hours at every show in doing so, and then you suggest that I have not brains enough to take into consideration all the different tours that birds sing and the way they sing them before I begin to make all these remarks. Why, it is not worth an answer. Yet what about purity and delivery? Have these to be left out of the question altogether? Now, Mr. N. states this was a "very wobbly" or "insulting" reply, and goes on to try and cover all his own not straightforward answers by posing to write to the press for the cause of "fair play and justice." Well, if this is what he considers fair play, I am not surprised at his members inside London being on the decrease, as in 1904 there were thirty out of a total membership of 84, while in 1907 there were only 17 out of a total of 97. Therefore I would suggest to Mr. Norris if I was secretary of a club like the B.R.C.C. and I had to postpone three meetings in succession because I could not get more than two or three members present at a meeting, I would alter my mode of "fair play" or resign, in the hope that things would improve. Now, just a few words to my fellow-members of the B.R.C.C. and Roller fanciers in general. I should be very sorry to think any of you have taken the same view of the above matter as Mr. N. I ask you to put yourselves in my position and assume you had two young birds that answered all your expectations and you were quite sure you had reached the height of your ambition, and then you find the birds time and again put down below birds that you know are inferior. In what way are you going to find a remedy? Saying nothing and thinking a lot is poor consolation. So here comes the great value of the Fancy Press (a value you will never feel until the crisis comes), and I considered a money challenge the only way to bring about proof as to whether I was right or wrong. My only desire was to show that the birds do not get a proper hearing (or it would be impossible for some of the results to have been as we have seen them in past shows) and that there is room for a vast improvement in the present system of judging. I see one move is being made to compel a marked judging sheet to be posted up at every contest, with every bird's points given thereon. This will give every visitor the opportunity of seeing what a bird has done, without troubling the judge. I urge upon members to attend your club meetings and pass a resolution to bring this into effect. Finally, should anyone's views be like Mr. Norris', I am still prepared and very anxious to match these two rung birds against any other two rung birds. Or if anyone thinks it is too late this side the breeding season to make a match now, give your ring numbers to the Editor of this paper and deposit your money, as a match for nothing is like a purse without money. I will stake £15 to £10, to be sung for any time next contest season, as they are the best that remain the best. So don't say I have backed out of my challenge.

W. WHITTAKER.

NESTING DIARRHŒA: ITS CAUSE AND CURE WANTED.

SIR,—Being a breeder of Canaries, I have this last year or two been troubled during the breeding season with my hens having nesting diarrhœa—not one or two, but nearly all of them (about twenty). I have several friends who have hens troubled with the same complaint each year. In fact, my friends and I lost four or five hens each last season, and, of course, that meant losing eggs and young. We withheld all green food during sitting, feeding only on Canary seed. I wonder if some kind fancier would tell us, through CAGE BIRDS, what we could do to prevent it, or what to do to cure it? I have only been troubled the last two years, and I wonder whether the water had anything to do with it, as the water company have had new softening beds made, and I thought perhaps something was used in the process of softening that might cause the trouble. If some kind fancier can give myself and friends a hint I shall be grateful. A WILLING LEARNER.

A NEW SOCIETY FOR POPLAR.

SIR,—I shall feel greatly obliged if you will announce in your estimable paper that the fanciers of Poplar and district met in the Schoolroom in Newby Place on March 27 for the purpose of forming a Cage Bird Society for Poplar. Thanks to the energies of Messrs. Hunt and Cowles and the assistance of your valuable paper we had a very fair attendance. Fifteen enthusiasts turned up, and were enrolled as members, and we have hopes of very many more who have decided to join, but were prevented from attending the first meeting. The business of the evening commenced with the election of a chairman, the duties of which fell to Mr. F. G. Hunt, who very ably filled the position. Next came the choosing of the title of the society, and it was decided to name it the Poplar and District Cage Bird Society. The election of officers was the next item proceeded with, and the result was as follows:—Hon. treasurer, Mr. T. G. Hunt; hon. secretary, Mr. H. W. Cook, 4a, St. Dunstan's Alley, Great Tower Street, E.C.; committee, Messrs. T. G. Hunt, H. W. Cook, J. Cowles H. Cole, A. E. Martin, T. Blackley, and P Boyson. Further, it was decided that the annual subscription should be 2s. 6d. and 1s. entrance fee. With a discussion on rules, etc., which will be finally decided on at the next meeting, the proceedings closed. We regret to have to report that we shall be unable to have the use of the Schoolroom again, as the premises are coming down, but we are looking up new quarters and will duly advise through CAGE BIRDS where we shall hold our next meeting, which will be on the last Thursday in April. All subsequent meetings will be held last Thursday in the month. I shall be pleased to hear from prospective members, and trust that those intending to join us will turn up in full force at the next meeting. Wishing your paper the continued success which it richly deserves,

H. W. COOK, Hon. Secretary.

RAMSGATE & DISTRICT F. & F.S.

Sir,—The above was the name given to the society which was formed on March 23 at the Oriental Cafe, High Street, Ramsgate. Bills had been circulated about the town the previous week, and letters had appeared in the local papers, with the result that we had about 70 ladies and gentlemen interested in some branch of the Fancy. Copies of CAGE BIRDS were distributed among the company and that branch of the Fancy was represented by the Hon. Sec. of the Isle of Thanet F.S., Mr. W. J. Jones, Mrs. Bailey, Messrs. Brown, Matthews, Hunt (of Margate), Miss Gwyn, and Messrs. F. Thomas, Abbott, Poulton (of Ramsgate), and many others. The Mayor, Councillor Clutton, is to be asked to become President. Two of the Councillors, Messrs. Price and Chaney, have consented to be Vice Presidents. A working committee, with Mr. S. J. Ackroyd as chairman, Mr. Cockran as Hon. Sec. and Mr. Tucker as Assistant Secretary, and Mr. W. Hogbin as Treasurer, has been elected. A large number of names have been given in for membership. Its membership will include Fanciers in all parts of Kent. According to the interest shown at the inaugural meeting the Society bids fair to be a success.

F. THOMAS.

BORDER FANCY CANARY CLUB AND ITS JUDGES.

SIR,—I am pleased to hear from Mr. Patterson that he is not acting as mouthpiece for any one, but rather sticking out for freedom and endeavouring to controvert the insinuations that have, and are being made against the supposed "clique" of the B.F.C. But while I and your many readers can all admire Mr. Patterson's courageous and fearless defence in his last epistle, yet we cannot fail to notice that he is evading my question where I ask him if he has never met fanciers outside the B.F.C. capable of judging Border Fancies. While I still hold that by the tone of his epistles he is endeavouring to hold out to the Fancy that only a very few members of the B.F.C. are capable of judging Border Fancies, yet he denies making such a statement. But I now ask Mr. Patterson what he means by the following statements previously made. He said: "Just think of the trouble and expense it will cause societies seeking the club's patronage. They may write to any of the prominent judges, who they think will draw a good entry, and find he is engaged to his limit. They try another, with the same result, and so on, until they have either to take a novice, and risk the chance of a good entry, or engage one of the known judges and discard the patronage of the club. Then he further says: By restricting judges to the two shows (the prominent judges), by the time the Scottish National and the Crystal Palace (two of the largest shows) come on, there would be nothing but perfect novices to place the awards. Also, in reply to Mr. Turnbull, Mr. Patterson says: Let societies, if they are not pleased with the present judges and want a change, select from amongst the members, men they think will act straightforward, without fear or favour, in placing their awards; and he points out that most of the B.F.C. members are members of other societies; therefore they have power to change the judges. I would be very sorry if the statement could be proved true that only the few prominent judges come from the B.F.C.—some of them taking the task of judging any variety, from a Wren to a King Parrot. I have faith to believe that when the appointed day has come for them to take their place with the great majority there will still be left in Scotland fanciers capable of placing the awards in either the Scottish National or Crystal Palace shows. While quite willing to give Mr. Patterson credit for his epistles, I fail to see where his admiration of discretion comes in when he well knows that the B.F.C. (as well as some other clubs) has a rule that no society, no matter what classification they risk, can have the patronage of the B.F.C. unless they select a member of the B.F.C. as judge. Hence one reason of the prominence of the club's judges, as they are generally followed by large entries from a few of the B.F.C. members.

ROBERT LAMBIE.

BIRD NETTING IN THE FENS.

SIR,—During the winter months a great deal of bird netting has been going on. On some nights from 8 to ten nets have been out round the hedges; boys have been out nightly, but they dare not venture so far afield as the men who are often out until 1 and 2 in the morning. This is done chiefly on moonlight nights, but some go out when it is dark, with a bulls-eye lantern, which they shine full on the net, whilst those on the opposite side of the hedge do the beating. The "takes" are of all kinds, one net caught two fine Fieldfares in a large hedge. This will show your correspondent in the Wild Bird Notes column of January 18th that these birds do roost in hedges. One net caught nearly three dozen Linnets, which were placed in a large barn wired in, and were fed on wild seeds, the screenings from the thrashing machines, without any other kind of food. In about three or four days' time all these nice birds were dead; so much for the ignorance of the netters. A large number of both Blackbirds and Thrushes were caught, but these, with one or two exceptions which were sold for singing birds, were made into "puddens" with a lump of salt pork, for they "were as good as Partridges," the catchers said. The Sparrows which were caught, both in the hedges and round the stacks and barns were enormous in number. These were made chiefly into pies and given sometimes to the cats and ferrets. Greenfinches and Yellowhammers have been very plentiful. These have generally been killed merely for the sake, I should say, of destroying life. When one remonstrated with them for so doing they only replied, "Well they were no good, you could not eat them." Very few Chaffinches have been caught. On the other hand, there have been others out who keep some of the birds, of most kinds, and sell the others which they don't require for muling and hybrid purposes. One young man, who has caught Redpolls, Goldfinches, Linnets, Yellowhammers, and Chaffinches, has already put up 10 or 12 pairs. He made the cages from old boxes obtained from the grocers. He has already got two with eggs, but what kind I have not yet heard. I am quite afraid they will be useless so early. This informant told me his "secret," that he had got his birds well forward and to whistle very well by feeding them on "nut kernels" crushed. In my time I certainly have tried most things, but I must confess I have never given my Goldfinches that kind of food to make them "whistlers." Perhaps some of your numerous readers may have tried it. Other catchers who have been out Lark catching have taken no end of Larks. This Lark catching has taken on. This last winter seven or eight parties have been out nightly. Last year hardly a net was out. What they do with the birds I cannot hear, but I think they are killed and sent weekly to London, as a fish dealer generally buys them all up. We only have about two clap nets in the district, and these are chiefly for Goldfinches and Linnets, which are sent away. I have heard of three Bullfinches being taken with the nets round the hedges, but no Goldfinches. A few Bramblefinches were caught early in the winter with the clap nets, but none since; they seem to have left this district. The Bullfinches have now come into the gardens and orchards, and are doing plenty of mischief amongst the buds. There appear to be more cocks about this year than hens. It was the other way about last year; most of those captured by the trap cage were hens. I have tried myself this year to get hold of a hen or two, but cannot as yet do so; every one is eagerly snapped up when any one has any. This all comes about by reading CAGE BIRDS, so I expect I shall have something later on to relate in its pages. If one or two fanciers can only raise a hybrid or two it will cause a lot more to start in this hobby in this district. I see no reason why they should not do so, and prove successful, as novices often meet with the best success and get the best of luck, both with hybrids and Canaries.

T. H. KINCH.

A CANARY'S WHITE EGGS.

SIR,—I read with interest "The Cuckoo's" remarkable experience of the hen Canary laying two milk-white eggs. Might it not be for protective purposes that she laid them white? She might observe that "The Cuckoo" was keeping an eye on her nest, and by having them white they might more readily escape observation when lying on the swansdown lining. So much for a joke on the nom de plume. I had a similar and I think more remarkable experience last season—more remarkable because the Canary is a domesticated bird and more likely to sport, even in the colour of its eggs, than a wild bird. I had a hen Bullfinch which laid two clutches of pure white eggs, five in each clutch, and you could just notice a faint pink colour caused by the yolk showing through. The first clutch I blew and added to my collection, both clutches being untertile. They were the ordinary size, and the shell was of the normal texture and thickness. The second clutch I divided among some fanciers who called to see my birds. I don't remember meeting with any exactly similar occurrence in a state of nature, but I once found a Yellowhammer's nest with two newly hatched young and an unfertile egg, which was of a uniform greenish-white colour, about the shade of a Starling's egg, and without any spots or streaks whatever. It was the ordinary size and the shell was of normal texture. I mention this latter fact because I have noticed eggs that are thin shelled are occasionally pale in colour. Whether the two eggs that the young hatched from were the same colour, I had no means of ascertaining.

GAVIN ALSTON.

THE SOUTHERN NORWICH PLAINHEAD CLUB SHOW CAGE.

SIR,—I noticed in this week's CAGE BIRDS that the committee of the Southern Norwich Plainhead Club have adopted a universal pattern show cage. Now I consider this a very hard and fast rule, especially when many fellow fanciers of the club make their own cages, which I venture to say are the greatest credit to them. They make these cages not merely for the saving of expense, but because it is "part and parcel of their hobby in which they revel." Personally I have, at the present time, about sixty cages in my possession some twenty of which are Norwich show cages, all made by myself. It is most likely that there are many more brother members who make their own cages, and pass many pleasant hours away. Therefore it comes to this, that these members will probably have to sell their show cages for about sixpence each or break them up for firewood, and go to the expense of, say, 2s. 6d. per cage, in purchases from a cage-maker appointed by this committee. Furthermore, considering the Fancy is made up of working men, who have not got too much £ s. d. to expend on an entirely new stock of show cages, I venture to think this will be the means of many members not showing at the club's shows, they giving preference to the shows where they can exhibit their birds in their own cages. Personally I think it is almost inconceivable that these gentlemen should show such a lack of consideration of all concerned. I call it absurd, and it only tends to show that there is little faith in the judge officiating. Had the said committee carefully thought of the interests of brother members who appointed them to office, perhaps they would not have passed such a rule. The fact of the matter is this, many committees of leading societies and clubs are composed of gentlemen of a fairly sound financial standing, and can afford to buy fresh show cages, as per rule above, whereas the bulk of members are of the average working man type, who cannot afford to buy fresh cages when and where the aforementioned committee choose to decide. I sincerely hope that this matter will not drop here, but will be taken up by other working men fanciers who have the welfare of the Fancy at heart, but for goodness's sake leave personalities out of the argument, as we shall probably all get into hot water, and no decision be arrived at, at the finish.

A. J. MARLEY.

The Little Owl.

Little Owls are now very numerous in this district, writes Mr. T. H. Kinch (Ramsey, Hunts), and are prolific breeders. I hear that two nests were found with eggs in them some time ago. I did not think they started to breed so early as the other Owls, but it appears they do, for the person who found the nest has been in the habit of taking a number of these birds each year, and knows all their haunts and ways. I saw last year 17 young ones he had in a basket at one time, and was sending away to some dealer, who takes all he can get each year.

Books every Bird Keeper and Breeder must have.

Canary Breeding for Beginners - - Post free, 7d.

By Claude St. John.

A practical, up-to-date guide to the cult of Canary breeding, designed specially for the use of the beginner in the hobby. It contains many helpful illustrations, and deals very fully, and in an easily-understandable manner, with the choice, sexing and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the details and difficulties likely to confront the breeder.

House's Canary Manual - - - - Post free, 1/2

This is a thorough and practical guide to the general management and breeding of Canaries, written by a well-known expert and judge. It contains chapters dealing fully with the breeding, etc., of every member of the Canary family, and an illustration of each bird, by the master Canary artist, Mr. H. Norman, reproduced in the finest art style. There are also exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge approached by no other book of its kind at the price.

Cage Birds 1908 Annual - - - - post free 7d.

The Standard Guide to the Cage Bird Hobby is a title bestowed upon the ANNUAL years ago. And the 1908 edition merits it more than any previous volume. Revised and brought up-to-date from cover to cover, with a lovely coloured plate and many full-page art illustrations, and crammed with valuable articles and unique and helpful features, it is the finest value for money ever offered lovers of birds. Canary, British, Hybrid and Foreign bird enthusiasts alike will find it a Complete Guide to the Fancy.

The Stock Book (Our Invaluable "Breeding Room Register.") - - - post free. 7d.

A well-known fancier has said of it:—"It makes bird-breeding easy." This book is one no breeder of birds can possibly afford to be without. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred—keep account of their strong and weak points. It contains both Pedigree, Breeding, Young Bird and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

CAGE BIRDS CHARTS.

No. 3: The Bullfinch: Its Exhibition Points and Failings.

Notes on the Drawing on Page 357.

The third chart of CAGE BIRDS' series will, I feel assured, be hailed by lovers of British birds as a fitting companion for that grand plate in the Birthday issue which dealt with the Goldfinch. Bullie is a beautiful bird, his amiable disposition in captivity endearing him to bird-lovers quite as much as his captivating shape and colouring. His popularity on the show bench, too, is great, and his "points" will be readily grasped from the chart by, I think, even the uninitiated in exhibition matters.

In the centre medallion Mr. Norman has depicted what he terms "a winning specimen." None, I fancy, will quarrel as to the appropriateness of the description. A Bullfinch so shapely as this, and so nicely marked, would take a deal of beating. The colour—probably the most important essential to success—we have, of course, to take on trust; so we will assume he is, as the gentle reporter sometimes puts it, "red-hot in breast colour." That being so, then we have here what all good fanciers hunger to possess, "a champion exhibit."

The first good point to strike one about this bird is its excellent shape. In size just that happy medium which steers its owner clear of sarcastic (to put it mildly) remarks anent his bird's nationality, it has yet plenty of substance, with a chubby body, broad and well-rounded chest, short and well-filled neck, and a bold shapely head. Above all, it stands at just the right angle across the perch to give it a fascinatingly "perky" appearance. You can almost imagine him on the verge of "wagging" his tail in that strange, jerky fashion beloved of the Bullie—one of the many little mannerisms which endear him to us, and make him "a little dear" in the eyes of the ladies.

To turn to his markings, the cap, as the black plumage of the head is termed, is the most important. Its shapeliness depends largely on the formation of the bird's head, for a flat-headed Bullie never appears so good in cap as one with a nicely-rounded skull. Again, the cap must be of good width, and the head plays no small part in assuring this. At the back, however, the cap, even on a bold-headed bird may run narrow (as will be explained later), and this is a fault.

The bar across the wing is another important item. This should be broad, clear-cut on the edges, and as white as possible in colour. Many birds have the wing-bars more or less the same tone of colour as their back, and then they are said to fail in distinctness. Of the black feathers in the wing, it need only be said that they should be as ebon in tone and as highly polished as it is possible to get them. The same remark applies to the tail feathers, and also to the colour of the cap.

The back colour should be a distinct blue—a slightly ashy blue, it is true. A really blue back colour may be said to be a hall-mark of the bird's British nationality. The Continental Bullfinch (whether the small bird frequently exhibited as British or the very large Siberian) has the blue on the back a much lighter shade, which may be described as electric blue, and which looks faded compared with the "true blue," so to speak, of John Bull (finch). Still, even British Bullies vary in the intensity of their colouring (as do all other birds, indeed), and this is not a point one could swear by; the farthest one can go is to say that a Bullie with a deep-blue back has not found its way to England by the agency of a steamship.

The all-important breast colour demands very few words; it needs to be as rich and pure a crimson as can be got. It is the rock on which many otherwise grand birds come to grief; a point exceedingly difficult to get in perfection. A bird with a poor-coloured breast when in the wild state can never be improved in colour by a house moult. As a matter of fact, colour is generally lost after a moult in captivity, hence the desirability of getting as hot-coloured a bird as possible to commence with. It is safe to say that the majority of Bullfinches are "smoky" in breast colour. But occasionally one is found—a regular fiery red—singularly clear and bright in comparison with its fellows. Lucky the discoverer, if its other points equal the excellence of its colour. He can afford even to lose a little colour in the moult, for he will still possess a bird able to give points to the great majority of its competitors so far as richness of breast colour is concerned. I must mention that at the root of the tail the crimson is replaced by plumage of a silvery whiteness, presenting a delightful contrast.

To turn to the faults frequently found in the exhibition Bullfinch, Mr. Norman begins his picture, appropriately enough, at the head of the bird. The panel contains sketches of four caps, all faulty in some particular. The first extends too far down the back of the skull, into the nape, or neck, thus marring the appearance (or "balance") of the head. The second is narrow at the back—a common failing. In this case the cap, instead of extending over the skull at an even width, narrows in at the back, and the bird (to fall back again on the reporter for an expressive phrase) becomes "pinched in cap." To be "pinched at front" will require no explanatory remarks after the above sentences. It is a much more common failing than the one last referred to. Sometimes a bird's cap will spread at the back (when it might be described as pear-shaped), and this tends to make a bird look narrow at front. To be "badly defined" is a sad failing for any cap to indulge in. The ragged appearance of the edges detracts seriously from its owner's good looks. The ideal is a broad cap, as wide at the back as it is at the front, and set on a proportionate, nicely rounded head. It should not be square-cut at the back (like the corners of a Goldfinch's under-blaze) but just rounded off.

"Bad cap and bib." Here we see a cap with a nasty jagged outline, badly finished at the back and faulty at the "bib" (under the beak) where it leaves a light-coloured spot.

"Small Head and Neck." It will be seen at a glance how badly a small head and thin neck become the Bullfinch—they are quite foreign to the accepted meaning read into the phrase we so often see used, viz., "the Bullfinch type." This bird has another bad failing also: he is too straight in carriage—contrast him with the jaunty-looking wining specimen, and his inferiority in this respect is manifest.

"Indistinct bars and bad wing carriage."—The desirability of the wing bars being as white in colour as possible, has been laid stress on when speaking of the "champion," and the drawing under notice well emphasises the point. The streaks of silver afford a charming contrast to the jet black wing markings, and to the blue back, and serve more than a little to enhance the general effect of the whole colour scheme—a Bullfinch without well-defined wing-bars cannot be described as perfect. Bad-wing carriage is, I think, not a very prevalent failing with Bullfinches, but a bird which did not carry its wings well-braced (tight against its body) would, of course, be handicapped in a close finish with a bird which was perfect in wing carriage.

"Uneven in colour."—This is a difficult fault to show in any but a coloured drawing. It is a fault, however, many Bullies possess. The unevenness is usually pronounced on the throat and at the edge of the cap, whereabouts, indeed, it is not at all unusual to find exhibition Bullfinches "running light." In odd birds this peculiarity is quite marked.

"Rather spare in body and rough at thighs."—In the final figure of this very instructive drawing we have a Bullfinch rather "thinly got up"; in other words, lacking in body substance. Generally speaking, this is a serious shortcoming, but occasionally a bird rather lightly built will do well on the bench because of its extremely rich colour and excellent quality and condition. Of course, it will also be good in markings and the other points which go to make up an exhibition specimen. Roughness at thighs is a well-nigh fatal defect, one judges and exhibitors alike abhor. Often it is the result of unsteadiness, and in this case once the bird becomes at home in the show cage, the roughness will disappear. Birds which have never been cage-moulted are prone to carrying the feathers at the thighs loosely. I have met cases, however, in which house-moulted birds were the despair of their owner in this respect, and nothing could remedy the failing. Naturally, the exhibition career of a bird which "shows trousers," as it is often termed, is not likely to be an honoured one.

G. E. WESTON.

Scale of Exhibition Points.

Reprinted from "Cage Birds Annual."

Size	10
Shape—As thick and chubby as possible, with short, thick neck	15
Head—Broad, with clean-cut cap	10
Back and Wings—Colour of back, bright and clear, free from smoky appearance; wings carried close, with the bars well defined	15
Body—Breast colour to be as rich and bright as possible	25
Condition—Feather to be soft and silky, the colours throughout to be deep and glossy	15
Steadiness	10
Total	100

ILLUSTRATED IDEAS

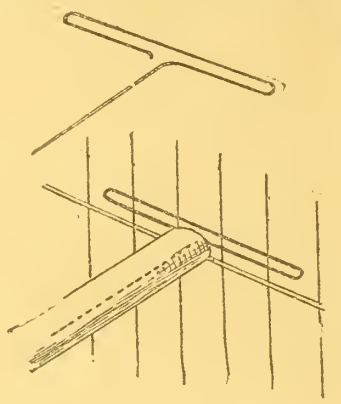
Under this heading we shall illustrate weekly some ideas useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 193.

A MOVABLE SPRING PERCH.

Sent by J. Wills, 3, Victoria Street, Merthyr Tydfil.

Take a piece of ordinary cage wire about 8 inches long, and make a right-angle bend in it about two inches from one end. Afterwards bend the long arm as shown in the illustration. Then drive the short arm into the perch, and fix the loop between the wires of the cage front. This perch is nice and springy for the birds to alight on.



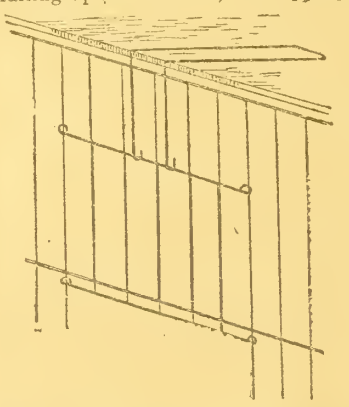
Another method is to take a piece of tin about 2 inches by 6 inches. Bend it double and fasten it on to the end of the perch by means of a short nail or tack. These holders are very useful, as they save the trouble of nailing or gluing the perches to the back of cage.—J. WILLS.

No. 194.

A SLIDING DOOR FASTENER.

Sent by J. Smith, Herbert Street, Mansfield.

The sketch shows a very simple yet satisfactory device for keeping the doors made on the slide-up principle from closing while the bath is being given to the birds. There is no fear of the door dropping down and falling upon the birds, or trapping them



in the bath. Take a piece of straight wire and bend it into the shape shown in the sketch. One part lies on the top of the cage, the other to the distance desired over the point, and then the hooks (turned up parts at end) grip the door and hold it up.—J. SMITH.

UNDER THE WHITE ROSE.

MR. C. WHITING, one of the oldest breeders of Yorkshires in Bradford, recently opened a discussion on his old favourite variety, at the headquarters of the City of Bradford O.S., before a good company of fanciers. Some valuable information was brought out, and altogether the evening was most interesting.

THE new Norwich Plainhead Club hold a meeting to-day (Saturday, April 4th), at 6 p.m. prompt, at the Market Tavern, Bradford, the business being to adopt rules, etc., also other important items. The club has every prospect of being a great success, new members still coming in, and there seems every likelihood of the Norwich Plainhead making great headway during the next season or two. Fanciers specially invited.

THE Yorkshire Union held the last meeting of the financial year on Saturday last, and many were the regrets expressed at the retirement of Mr. Hammond from the secretaryship, especially as the cause is the serious one of health. Without a doubt he carries with him the best wishes of the fanciers composing the Union, who all desire for him a speedy return to better health and strength. Mr. Battye retires from the presidency, his place being taken by Mr. J. Greaves, the vice-president, Mr. R. Halliday being elected to the latter position. The office of secretary is to be held by Mr. Samuel Dean, the late secretary of the Great Horton O.S.

IT is with regret I hear that Mr. Horsman, late landlord of the Travellers' Rest, which place was for so many years the headquarters of the City of Bradford O.S., is lying dangerously ill; in fact, he has been bedfast for many months, with practically no hope for recovery, and I am sure all fanciers will sympathise with him and his wife in their time of pain and trouble.

BREEDING operations in Bradford and district are proceeding somewhat slowly. Many fanciers have not yet paired up their stock, the weather being not at all inviting. It has been very uncertain, wind, rain, cold and sunshine all being mixed up in any kind of fashion, which is deterring breeders from taking the above important step. Plenty of birds are ready; still, great risks will be run if the weather continues in its present style. Hopes are being expressed that another week or so will see conditions more settled, and then breeding will soon be in full swing.

"STRAIGHT 'UN."

YORKSHIRE UNION OF C.B.S.

A meeting of the Council was held at the Market Tavern, Bradford, on March 28th, Mr. Battye, president, occupying the chair. Business transacted: Minutes of previous meeting passed as read. Business of sub-committee, re medals, confirmed. Correspondence read and secretary's replies voted satisfactory. Vote of entire confidence in secretary, re letters in press, dealing with Cage Bird Union matters, unanimously passed. Secretary instructed as to the nature of the reply to the Cage Bird Union's proposal, re a working arrangement with the Yorkshire Union. Grant of £5 made to the secretary for services rendered during the past year, also a medal, value £2, to be presented as a mark of the Union's esteem and respect. Balance Sheet, showing £17 4s.0½d., in hand, passed. Resignation of the Huddersfield society held over until next meeting. Mr. Simonett and Mr. Johnson were delegated to purchase the medal to be presented to the secretary. Votes of thanks passed to all retiring officers. Vote of thanks to chairman for presiding. Important: In addition to the above items it was resolved that societies intending to hold an Open Winter Show during the coming season must inform the Union secretary of such intention, not later than April 30th, 1908. Secretaries, please note. BALANCE SHEET. Assets. To 4 entry fees, 10s; 1069 members' subscriptions, £35 12s. 8d; Advertisements, £16 4s. 6d; Cash for judges fees, £26 11s; Cash for Show Rules, £4 5s. 2d: Cash for String, 5s; Cash for Carriage on labels, 5s; Cash for 4 extra medals, £4 4s; Cash for engraving medal, 3s. 4d; Cash for Cage labels, 19s. 1d; Bank Interest, 11s. 6d; Total £89 11s. 3d. Liabilities: By Ballot papers 1907, 17s 6d; Postage on above, £2 0s. 4½d; 1200 Handbooks, £11 7s. 6d; Distribution of Handbooks, 6s. 7½d; 12,000 Cage Labels, £1 16s; Carriage on Labels, 5s; 19,000 Show Rules, £3 16s; Carriage on Show Rules, 6s; Printed Postcards, 4s. 6d; Books, minutes, etc., 4s. 6d; Judges' Fees, £26 11s; Poundage on Postal orders 3s. 1½d; String for Cage Labels, 5s; Medals, etc., £20 14s. 4d; Expenses of meeting for presentation of prizes, 7s. 6d; Secretary's expenses, stamps, tram fares, etc., £3 2s. 3d; Balance in hand, £17 4s. 0½d; Total, £89 11s. 3d. Audited and found correct. (Signed) F. Armstrong, R. Halliday.—F. Hammond, hon. secretary.

BEGINNERS: READ "CAGE BIRDS" ANNUAL

The Novices Notebook.

This page will consist of topical hints, addressed chiefly to beginners, concerning every branch of the hobby of bird-keeping, and the notes will be contributed from time to time by various leading experts.

(Continued from page 331)

Having got the box ready, get the nest-pan and carefully drill a hole through the bottom of it immediately in the centre, and afterwards enlarge it until you have a circular hole three-quarters of an inch in diameter, which will be large enough to allow any Canary's egg to drop through without the least fear of getting jammed. The boring of the hole is really the most difficult part to make, but with a small drill, or even a steel countersink, to put in the first hole, it is easy enough to enlarge it with a little ordinary care and skilful manipulation. (By the bye, it might be well worth the trouble for a pan maker to mould a few of these pans with the hole ready for use.)

This part being finished, and the edges made smooth with a file, take the small box you first made and cut a circular hole in the top with a penknife seven-eighths of an inch or an inch in diameter—the precise size is not very important so long as you have this hole a trifle larger than the one in the bottom of the pan—see that the inner part slides in and out easily, and glue the cover of this on to the bottom of the nest-pan in such a way that the hole in the bottom of the pan entirely covers the hole in the cover of the box glued underneath.

The Next Step.

When the glue is dry it will be necessary to try how the drawer in the box slides in and out. Perhaps it will engage with the bottom of the nest-pan and not pas at all. In that case shave off a very little from the top of the ends of the drawer. Be careful not to take off too much, as they will be safer if left at the finish to bite just enough to make them require a slight push to send them out each time, as this prevents them slipping out unawares any time, and perhaps causing accidents to the egg therein.

Now line the nest in the ordinary way with swansdown, and when the paste has dried cut out with a penknife the piece in the bottom of the pan which covers the hole. You will now see that it is impossible for an egg to remain in the nest-pan proper, but as soon as one is placed in, or laid in it, it rolls at once into the drawer of the little box underneath, where it is perfectly safe from the mischievous propensities of the most confirmed egg-eaters. Of course, when it is going to be in use practically a soft bed of cotton wool must be placed in the bottom of the box for the egg to drop on to, and thus prevent the possibility of it being slightly cracked by the fall.

To Convert A Square Nest-box.

The procedure is the same as far as putting on the attachment underneath is concerned, when you wish to turn one of the ordinary wooden Norwich nest-boxes into a suitable contrivance for an egg-eating hen. Indeed, the bottom being flat underneath, it will be found much easier to glue on the attachment.

The only difference that is of any moment is that the inside of the box being also flat must be turned into a cup-shaped cavity, so that the eggs will be always sure to roll into the centre for passing into the box underneath. First find the centre of the bottom of the nest-box and put in the round hole as before. Being wood renders this an easy task for any one. Those who have proper tools at command will put it in neatly in a trice with a "centre bit." Those who have not proper tools may put a gimlet through the wood first and then chip out the hole to the proper size with a small penknife.

A still more primitive method which will be just as efficient is to burn a hole through with a red-hot poker. To give the inside the requisite cup shape, get a small quantity of plaster of Paris and an equal quantity of sawdust. Mix well together, and then make it into a paste with water, and plaster it around the bottom of the nest-box and in the corners so as to form a nice cup-shape running off in every direction from the sides to the hole in the bottom. The plaster will require to be made rather moist or it will dry too quickly to be moulded properly, but a little practice might soon enable any one to turn out quite a nice cup-bottomed box in a very few minutes. This is then finished off with a lining exactly as the earthenware pan.

Only Temporarily Useful.

It will be quite apparent that these specially contrived boxes or nest-pans are intended for use only whilst the hen is laying. But this is no detriment, as the class of birds for which they are required cannot be entrusted with eggs for hatching. The one great object is to get the eggs safe and sound from them in order that they may be set under another and more trustworthy pair of birds, and this object is accomplished by these special nesting receptacles with the greatest certainty; and, once the boxes are constructed, without the slightest trouble or danger.

But in the case of Muling pairs, where it is the cock Finch only that has to be thus foiled of evil intentions towards the eggs, he should be removed permanently the evening after the third egg is laid, and an ordinary nest-pan given to the hen with the eggs for her to hatch and rear by herself. Although not absolutely necessary to do so, it is as well when making the exchange to give a similar type of pan for incubation. Thus, if the specially arranged pan was an earthenware one, give an ordinary lined earthenware pan for hatching and rearing, and, similarly, if the special one was made from a wood nest-box, give a properly made nest in a wooden box.

Importance of a Firm Perch.

At first sight the perches in the breeding cage may not appear to have any great influence over the destiny of the prospective broods. This, however, is one of those insignificant trifles which are apt to be overlooked, or totally ignored as of no importance whatever, whilst all the time they may be the real cause of mischief which the owner is racking his brains to discover the origin of, and blaming anything but the right thing. A loose perch which wriggles about and tilts a bird forward every time he jumps upon it, so that he has to make a slight effort to recover his erect position at the conclusion of every jump is a very fertile source of clear eggs.

It is true that copulation very frequently takes place in the nest or upon the side of the nest pan, but this is not an invariable rule by any means, and it frequently takes place upon the perch nearest to the nest pan. In cases where the nest is hung on the side of the cage so that one of the perches must run very near the edge of it, it will be found almost the general rule for the hen, after calling to the cock, to pop out on to the perch, missing the edge of the nest pan in her excitement, and if that perch in particular is of the wobbly kind just referred to, the wild rush of the vigorous cock in response to her call is almost fatal to a successful union.

It will be seen, therefore that one cannot be too careful about having the perches in breeding cages securely fixed, and free from movement under the weight of the birds. Young and nervous birds, and also those which seem to be affected by leg weakness, are very plainly discouraged from performing their duties on perches of this kind.

Mating Weakly Birds.

This reminds me of a subject upon which one is often asked for advice, viz., whether such and such a bird will soon be fit for mating. In most cases the given bird is a specimen which would be all the better—both in itself and for the good of its owner—kept entirely out of the breeding room for a whole season. Take the case of a bird of last season being weak on its legs. It is almost invariably the case that such a bird is one of those weaklings which nature would never have allowed to survive had she had full control over its destinies; or, on the other hand, it is still immature and undeveloped.

If it is one of the larger breeds it is practically certain to be still in an immature condition, and only requires a few more months with good plain frame-forming food to complete its development and become a sound, healthy bird. But to breed—or rather, I should say, attempt to breed, for the efforts will usually end in failure—with this class of bird is to very materially reduce what chances they might have of developing into healthy and useful specimens. If they were relegated to a flight for the whole of the season, given a few rolled oats or very coarse oatmeal, and a few split groats occasionally, and twenty drop-doses of chemical food two or three times a week as long as the weakness was apparent, they would well repay one's trouble and care of them in the following season.

It cannot be too strongly impressed upon the tyro at bird breeding that just as it is sheer folly to mate together two birds that have no desire for mating, so it is utterly futile from a common-sense point of view to put up a pair of birds that are suffering from any constitutional disorder or general weakness. In the latter case the birds may go to nest, and if disaster does not overtake them and nip their efforts in the bud, young may be reared, but in nine out of every ten cases instead of those young being the pleasure and pride of the breeder, they will prove a constant source of worry and vexation.

Pairing for Pairing's Sake.

Where the novice makes a serious mistake is in being too anxious not to leave a single bird unmated throughout the season. It may almost be said that he mates the birds for the very thing's sake. Should he happen to possess suitable mates for all he is lucky; if he has not sufficient suitable matches, why, then they get mated up somehow —or anyway—simply because the breeder cannot tolerate the idea of keeping a bird doing nothing all the year, whereas he would do far better if he made a point of not mating late-hatched birds of last season until the middle part of this season, and then take only one brood from each pair. Better still if the birds are one of the large varieties not to mate at all this year, but reserve all their stamina to start the next season with, when they will be something like eighteen months old, and strong, well-developed birds, which will be in a much better condition for making their mark on the breeder's chart of results.

A Useful Point.

We very often see the system of mating one cock with two more hens recommended to breeders. That the method is successful when properly carried out cannot be denied, although there occur times when it gives rise to difficulties which the novice finds it hard to overcome. But perhaps the most useful feature about it lies in its adaptability to circumstances as they arise.

For example, we may suppose that the fancier is in doubt as to which of two given hens would produce the best result in a given direction when mated to a certain cock. Provided that the required points related to markings or any other point which could fairly be judged of as soon as the young leave the nest, it is quite possible to mate the cock alternately with the two hens for the first nest, and then, when these broods are pledged, one may leave the cock permanently with the hen which appears likely to give the best results in the direction required for the rest of the season. This, of course, will only be necessary where one desires a fixed mating, as there would be really nothing to prevent one continuing the system of double mating all through the season.

Or, again, in the case of one always preferring fixed matings, he finds sometimes when the first broods are on the perches, palpable evidence that a pair of birds have not "hit" as he wished, and if they have not started nesting for the second brood, it is still none too late to look around for another mate to put up with each of the faulty pair on the chance of the second broods being free from the faulty points which were objectionable features of the first brood.

(To be continued.)

Eiffel Tower MILKPUDDING

A 1d packet makes a delicious milk pudding in ten minutes. Try it. You will be delighted.

A COLUMN FOR FANCIERS.

Appended are brief particulars of some of "Cage Birds" SPECIAL PUBLICATIONS for keepers and lovers of birds, with post free prices.

"THE HYGIENE OF BIRD-KEEPING." - 1/1
By W. Geo. Cruswell, M.D.
A most useful manual, thoroughly treating of modern hygiene in bird keeping, by the most eminent living authority on the subject.

"SEPTIC FEVER OR CANARY PLAGUE." - 7d.
By R. H. Clarke, M.R.C.S., M.A.
A very useful booklet concerning this dread disease. It is the only one published, and should be found in every bird-lover's library. Dr. Clarke has given the subject very special study.

"THE NORWICH PLAINHEAD CANARY." 1½d.
By J. H. Payne.
A Lecture reprinted from Cage Birds, delivered by this leading judge and expert before the London and Provincial Ornithological Society, and pronounced by all experts to be a most valuable pamphlet concerning the breeding of the variety.

BREEDING CAGE LABELS, 1d. doz., 7 doz. 6d
A boon to all breeders. Neatly printed in sets of twelve, on perforated gummed paper. They can be torn off, and affixed to the breeding cage in a moment, and prevent all confusion. Useful alike to both small and large breeders of birds.

CARD BREEDING REGISTERS, 1d. each, 4 for 3d., 9 for 6d.
For hanging up in the birdroom. Printed on suitable stiff card, they are ruled to hold a complete record of the breeding results of six pairs of birds; invaluable for future reference, to ensure that knowledge of one's stock essential to accurate breeding.

LIVE BIRD LABELS, 24, 3d.; 50, 6d.; 100, 1/-.
For use when despatching live birds on journeys by rail, or to the shows, etc. Printed in red ink and gummed on back. The simplest, neatest, and best on the market.

NOTE PAPER & POSTCARDS, 250 for 2/-; 500 for 2/6.
Until further notice we have decided to supply below cost price artistic Memorandum Forms and stout postcards, with name, address, twelve words of particulars, and blocks of any special variety of bird at half cost for cash. Carriage paid to any address in the U.K. Our latest style of note-head and postcard has been universally admired, and we will gladly send specimens to anyone enclosing stamped addressed envelope.

BLOCKS OF BIRDS, 1/6 each, 5 for 6/-, or 9 for 10/-.
For inserting in advertisements and for printing memorandums blocks of all kinds of birds at above low prices can be supplied. Larger blocks to order at cheapest possible rates. These dainty little blocks immensely enhance the appearance of note paper, postcards, and advertisements.

PICTURE POSTCARDS, 1d. each; set of six, 6d.
The most delightful and appropriate postcards of Canaries, British Birds, and Hybrids on the market, executed in colours by Mr. H. Norman. Ideal for Fanciers' correspondence. All represent exact and correct show types and have accompanying descriptions. State which bird or birds are required, or whether a mixed selection is preferred.
The latest set is entitled, "Pairs Matched for Breeding"; very educational art postcards. Price 3d. set of 8.

ORNAMENTAL PLATES, 1/- & 1/6 each.
The following coloured plates of Cage Birds can be obtained mounted on stiff card and gelatined. This process makes them washable and gives them the handsome appearance and all the durability of framed plates under glass:—Bullfinch, Blackbird and Robin, Border Fancy Canary, Bullfinch Hybrids, Cinnamon Canary, Cinnamon Marked Yorkshires, Foreign Finches, Goldfinch and Bullfinch, Hybrids (popular), Lancashire and Lizards, Mules (popular), Norwich (Yellow), Parrakeets, Yorkshires. Price 1s. each. Crests, Desirable Aliens (Foreign Birds), Larks and Pipits, Norwich (Blaze of Colour), Wagtails and Stonechat. Price 1s. 6d. each.
Also a padded plate of KINGFISHER having all the appearance of a hand painting executed on ivory. A most charming ornament for brackets, occasional tables, etc. Price 1s. All are post free.
Why spend large sums on decorating the house with other pictures?

FANCIERS' PRINTING.
Fanciers requiring business notepaper, postcards trade envelopes, etc., should write us for a quotation. We are now in a position to supply these at specially low rates combined with first-class work.

Management of Scotch Fancy and Belgian Canaries.

By THOMAS SMITH.

(*Continued from page 296.*)

April.

This is the month which raises the hopes of breeders. Eggs appear, and if the stock is fairly large they keep the owner busy. The eggs should be removed as laid, and should be put back to the nest on the evening on which the third egg is laid.

The hen will take to the nest, and if she sets steadily the young will hatch on the morning they are due, which is a decided gain, inasmuch that the young will get fed before they encounter the night, thus strengthening them at the very outset.

It is cheerful to see a nest of thriving young. Eggs occasionally get pulled out of the nest, which necessitates a watch being kept. Should an egg be found on the nest platform, it should be instantly restored to the nest; it might hatch, and the young bird prove a cup winner. "Save all that can be saved," should be practised by every fancier.

A day or two before the eggs are due to hatch they should be dipped in lukewarm water—it will help the young to break the shell. The setting of the eggs when three are laid ensures the entire brood coming out together, and being all the same age they thrive. A couple of days' difference in age sometimes spoils the whole nest.

Hens Not Taking to Nest.

Certain hens will not take to the nest. Whether they think they are wrongly placed or otherwise faulty remains a mystery. They fly about and try to build in the food pan, in the seed box, or in a corner of the cage—anywhere but the appointed place. This class of hen is most difficult to control, and frequently drops the egg from the perch, breaking it. A change to a different part of the room may help, but what may assist one may not be of any use to another.

When a hen will not nest she goes on laying eggs continuously, and the first year of laying becomes her last year of laying. Every means should be used to get such a hen to take to the nest and to hatch and rear. I have seen the placing of a nest upon the opposite side of the cage have the desired effect.

Rushing Hens.

The most prevalent evil with the Scotch Fancy Canary is the rushing of pairs. Provided with common pairs as foster parents, and having a wish to take the most out of the high class pair, the breeder sometimes takes the eggs and passes them on to another hen which may be sitting. The Scotch Fancy or Belgian hen may be allowed to sit for a few days on dummy eggs. Then they are taken from her and she starts again, this in some cases being repeated so rapidly that she is laid out before the early half of the breeding season is over. In the best of the season the breeder wakes up to find that he has made a mistake and has lost his opportunity.

If birds will hatch and rear they should be allowed to do so, as it may lead to the birds doing all right for the remainder of the season. Were patience exercised, it would change failure in many cases to success.

I have already described the kind of nest. Some birds make splendid nests, and cannot get enough material to complete the building. These simply amuse themselves building and pulling down, which is repeated over and over again, until eggs are laid. It is not essential for the hen to build a cosy nest. When she does, she should be left to hatch in it. But in cases where a proper nest is not constructed it is preferable to clean everything out of the nest before giving the eggs, as it enables the fancier to see if the shells of seed or other material which is unnecessary have got into the nest. Sand and seed in the nest may injure the egg or eggs, and the breeder may lose what might have been a prize winner.

Hatching of Young.

Certain hens will not hatch unless the cock is allowed to remain in the cage. In such cases, if he does not molest her or the eggs, it is wise to keep him with her. Indeed, more progress is sometimes made with them together than in running a cock with two hens.

The cock and hen, if agreeable, are in their natural condition. He will feed the hen, and when she is off the eggs he will sit on the eggs. On the young appearing, the advantage of having the pair together is apparent. One invaluable cock commences to feed the young the moment they are hatched, and if his mate is active she will come off the young frequently and the pair both feed.

A Rapid Growth.

The young will grow rapidly. It is beneficial for the young to have the hen off occasionally; they grow more quickly and the feathers come away nicely. Nothing equals joint rearing, and it should be encouraged, certainly never discouraged. A hardy working couple are invaluable.

A lazy hen is a "heart-break," and when a fancier has one, he should take out the male bird on the eggs being put into the nest and leave her alone. This will compel her to get up for food. Such a hen, if she feeds the young, should be kept without her partner until the young are eight days old, when he can as a rule be put back with safety.

A lazy hen not only starves the young but is apt to smother and kill them. If the hen gets fair play, she usually declares with the first clutch whether she can be relied upon or not. The fancier should carefully study the temperament of every bird, so as to guard against the weakness for future nests.

Over Vigorous Cock Birds.

Some males are so very "rampt," as we Scotchmen say, that it means disaster to leave him in the cage during hatching, as he will molest the hen, and this often destroys the eggs. A cock that is "rampt" (over vigorous) should be run with two hens, putting him with the hen that displays signs of being forward first, and so soon as the third or fourth egg is laid, remove him and put him into another cage by himself for two or three days. Then put him with No. 2.

The Substitute for Egg & Bread Crumbs,

SPRATT'S

COD LIVER OIL

Cage Bird Food.

Mr. R. A. BROWN, Sec. of Glasgow and West of Scotland Norwich, Mule, British and Foreign Bird Club, writes:—

"I have used your Cod Liver Oil Food and C. and C. B. Food, totally supplanting the usual Egg Food, these last two seasons and have great faith in its nourishing properties.

"I have successfully reared over fifty young birds on it and find its easy manipulation and handiness a decided boon in the bird room."

Rears from the Nest Gives Stamina.

SAVES TROUBLE & EXPENSE

In 3d. and 6d. Tins, post paid, 6d. and 9d., also in 3½ lb. and 7 lb. Bags, Price, 1/3 and 2/6, post paid, 1/9 and 3/2. Send postcard for Samples also FREE Booklet on "Canary and Cage Bird Rearing."

Spratt's Patent Limited,

24 & 25, Fenchurch Street,

LONDON. E.C.

Should a bird of this description be allowed to feed, he will have to be watched in case he tears the young to pieces, as is occasionally done. A vigorous male, if he takes to the young, makes a capital feeder. I, however, prefer the quiet, docile cock that takes a fair share of the rearing and works quietly away. He is faithful and can be depended upon. There is no difficulty in running two cocks with one hen, if the hen lays a fortnight apart and hatches and rears freely.

Foster Hens

A lively, vigorous hen is invariably the best for a foster parent. A hen of that sort, as the breeding season approaches, jumps about the cage, now from one perch to another, then up on the wires using her wings freely. She is never a moment at rest until she lays and takes to hatching. She leaves the eggs occasionally and takes a little exercise. The young under such a hen hatch in good time and grow rapidly.

A quiet hen that slips about unobserved is not to be despised. Unlike her demonstrative sister, she may, in her own way, be equally faithful and quite as reliable as feeder. She is likely to be more careful in leaving the nest, and not so apt to pull out young birds.

The one thing needful in a hen is that she be a reliable feeder. Yearly hundreds of young are lost through unreliable feeders, and many of these could be saved were fanciers careful in studying the dispositions of the various birds and in guarding against the weak points that were revealed in the first round.

A reliable pair of feeders, be they fancy or common, are worth their weight in gold, and they should be allowed to work in their own way throughout the whole season. As all fanciers know, it is cheerful to watch a nest of four or five growing and keeping pace together, under a careful, devoted pair. They take all the responsibility, and relieve the owner of all care.

The Bath.

A point of dispute among fanciers who breed high-class Scotch Fancy and Belgians is the question of allowing a hen to have the use of the bath while hatching. I have no hesitation in saying she is better not to have an opportunity of bathing during the first eight days. But she will benefit by having it twice in the remainder of the hatching time. It will reduce the chance of sweating, and the moisture from her body softens the shell and inner skin, and helps the young to hatch out when the weather is dry.

The inner skin often is so tough that the little, feeble bird cannot free itself. The looked-for chip is visible, but in some cases no more progress is made, and on the egg being broken next day, the inmate is dead.

The chief cause is the wings getting fixed. Where the hen will not bathe, the eggs should be dipped three evenings before they are due to hatch in lukewarm water. If the young do not come forth in due course they should be assisted, but undue haste should be avoided. The assistance must be rendered at the proper time, and should be done with great care. Assistance rendered too early and too late means loss. In very wet weather the baths and dipping are not essential, there being sufficient moisture in the atmosphere.

(To be continued.)

IN BIRD HAUNTS WITH A CAMERA.

A Lecture before the Scottish National C.B.S.

A treat to Edinburgh bird and nature lovers was specially got up by Messrs. A. Cochrane and L. J. Arrighi, under the auspices of the Scottish National C. B. S., when a grand limelight lecture was given by Mr. J. C. Adam in the Protestant Institute, on March 26th. The hall was packed to its utmost, and it was very gratifying to see so many ladies present. Mr. Grant, of the Merchant House, was in the chair, and was ably supported by the members of the committee. The lecturer began by showing on the screen a picture of a Rookery and took great pains in explaining the ways of the Rook and the various problems they had to think out in order to get their camera to hold up amongst the branches. I don't intend to go into the lecture minutely, but will give a rough sketch for those who were unfortunately absent. After the Rookeries, nests and eggs, we were shown a fine picture of two young Rooks which must have taken great pains to produce, the birds being in so natural a position. Next in rotation were shown nests, eggs and young of Blackbirds and Thrushes in the various stages of their development. The nest and eggs of that rare Scottish visitor, the Sedge Warbler, were next shown, followed by the neat home of the Hedge Sparrow, nest, eggs and young; and also of the hen sitting quite happy on her nest. What appeared to delight the hearts of the juveniles present, judging from the applause they gave, was a Robin's nest in an old tea chest, and the pictures of the various stages of the nest, eggs and young. But what seemed to give most pleasure were the plates shown of the young Robins on the top of the box. In the succeeding slides you could see the young Robins disappearing like the little nigger boys in the story, until only one was left. Nest, eggs and young of the Hooded Crow were next shown, and a grand plate was shown of two young ones perched. The lecturer then showed various snow-clad hills and mountains and streams in Scotland, also magnificent slides of primroses and snowdrops which even made you imagine you had the fragrant smell of those beautiful flowers. A double view of Duddingston, a small village a few miles distant from Edinburgh, was shown; then the picture of the loch, with the nest of the Mallard, and the hen sitting—which the lecturer said he took some hours to obtain, having to stand very deep in the water. A grand view was shown of a large Heronry on the Fife coast, and from the picture you could see the photographer in the tree with his camera. The lecturer explained the great trouble it took them to get the next plate, owing to the old birds attacking them; also of the young in the nest. One of the young had to be shaken out of the nest. A very hideous-looking bird it was. He also mentioned that when just under the nest the young bird emptied its crop of fish in his face. Various slides of Coots were shown, both of nests, eggs, and young in the various stages, and anyone doubtful as to the colour of the Coot was told it was slate; a large percentage of people were under the belief that a Coot was black. The lecturer explained that when out with his brother he observed a hole in a large beech tree, and having examined the hole, was convinced it held a Tawny Owl's nest with young, and after digging out some wood from the bottom of the tree withdrew two young Owls, of which a picture was shown and appeared to be well received. The young were shown in the various stages of their growth. Other slides were also shown of different Owls and their young. Next we came to the slides of the Curlew, nest, eggs and young, which are always very difficult to find, the colour of the eggs and nest being in harmony with the surroundings. We were then more at home when the Bass Rock was shown with its various families of wild birds and their nests, eggs and young. The slides shown are too many to mention. What was news to most of us was that the nest, eggs and young of the Peregrine Falcon were found on this same rock. It must have been very dangerous to procure such grand slides. This bird has now entirely disappeared from this rock since the lighthouse was put up; for which we are sorry. A diversion from slides of birds, nests, etc., was a slide of the adder, which was excellent. There was no doubt from the hearty vote of thanks given to the lecturer, on the motion of Mr. Grant, that his services had been fully appreciated, and in a happy reply he promised to give another such exhibition next season, when he expected to have something new and special to show. Great patience must have been exercised by Messrs. Adam for the production of such unique slides, with the assistance they got from the third party. A hearty vote of thanks to the chairman and promoters was moved by Mr. Dandie, President of the Scottish National, and this brought a meeting that will long be remembered to a close.

Some Notes on the Roller Canary.

By J. W. NORRIS.

A Lecture delivered before the City & Suburban A.C.B. on March 23.

(*Continued from page 334*).

The Cause of Clear Eggs.

Speaking of clear eggs, one has read in the past, and no doubt will do so in the future, what is the cause of clear eggs. In my opinion a lot of clear eggs come through the fault of the breeder. We find that about February the breeder says, I must see about putting the birds up. In goes the hemp seed, niga, egg food, etc., and about March he thinks he has got the birds into breeding condition and pairs them up; result, first round, nearly all clear eggs. Then he wonders at it, and when he meets other fanciers he is complaining about his hard luck.

I have to be convinced yet that the extra bit of seed and egg food that is put in for a few weeks will bring birds into breeding condition. Then, again, we have to contend with the weather. Fancy the poor hens sitting on eggs these frosty nights that we have been having lately. The birds should not be put together unless they are in breeding condition, especially the hens. And I find that a good many fanciers cannot tell if a hen is in breeding condition or not; and that is where I think the cause of a lot of clear eggs can be traced to.

There is no special treatment that I know of as regards the feeding of young Roller Canaries. They are fed the same as the other varieties. The hens, as a rule, make very good mothers, so that any one taking up the breeding of Rollers need not be afraid that it is difficult to breed Rollers.

Training the Young Rollers.

Having got your young Rollers the next thing is to train them. The method of training them varies. Some put them in single cages before the moult; others after they have moulted. The latter plan, I think, is the better, as I like the birds to go into the flight cages so as to harden them. If you moult them in small cages you get sickly birds and are apt to lose a good many of them; so that after they are moulted is the better time. You are also better able to pick the cocks out. Young Roller hens have a trick of trying to warble, and you can easily be deceived when they are young, and find that instead of having 20 cocks as you imagined you have only half that number.

One word of warning; having put the birds into single cages, don't close the door at once. Do it gradually, else you will find some of the birds dead through not being able to find the seed and water. One of the main things in training is to have good Schoolmasters, and if possible from the same strain. The young birds are more likely to pick up the different rolls than if you had a Schoolmaster from a different strain. Also you must not think that all the young birds will turn out so well as the Schoolmaster.

The training part is the most serious time for the Roller breeder. He must spend more time with the birds listening to them, as the young birds, in their attempt to copy the Schoolmaster, make all manner of peculiar noises. As soon as one hears a bird start singing a high tour, it must be taken away, or else it will spoil all the others. If you don't, then goodbye to all your fond hopes for that year. The young birds will pick up bad notes quicker than they will the good ones, and it is astonishing how they will persist in repeating them. It always puts me in mind of a child playing in the streets; it picks up a bad word and comes home and repeats it. You check it, but at every opportunity it repeats it; and thinks it is saying something clever. In time, however, it forgets it. But with a Roller, once it has picked up a bad note it never forgets it, which you know at times to your sorrow.

To be successful in training, the birds must be continually weeded out. Never mind if they are bred from your Palace winner; it doesn't follow that the offspring are going to turn out the best singers. As with other varieties, you don't always breed winners from winners. There is always a certain amount of luck attached to it. Man has not overcome Nature yet, so that he can mould winners. Nature steps in and very often upsets his arrangements.

At the same time one need not be an expert to breed winners. To give you an instance. One of your members, a novice who had never won a prize before, cleared the board during the show season, and at the Horticultural Hall Show he took first, extra first, and extra third. In fact, there is no other variety of Canary exhibiting where the novice stands a better chance.

DISCUSSION.

At the conclusion of the lecture, which was followed very closely and with much interest, the lecturer was literally "pelted" with questions, which he answered in a very satisfactory manner.

When is Rape Not Rape?

Mr. Curtis: Is it true that the Germans never use egg food in bringing up their young Rollers; are they brought up wholly and solely on German rape?—No; the Germans use more egg-food than is used with any other variety. Mr. Crisp: Do you think it possible to bring up young birds on rape seed alone?—Yes; but personally I should not care about doing so. It would, however, depend on the kind of rape-seed you used. There is good rape-seed, which is hard to get; most of the "rape" sold here in this country is a mixture of mustard-seed and cabbage-seed. Mr. Curtis: I understood you to say that most of the birds in Germany were fed in a kind of haphazard way, and you made no mention of egg-food.—I should have mentioned it; but not only that. Bread-sops are used largely, and I have heard of potatoes being given. In reply to a question of Mr. Crisp's, Mr. Norris said that real rape was a small seed which had a bluish tint and was not red, like most of that bought in this country. Mr. Crisp: Where can we get it?—Well, at the present time it is very difficult to get it at all, and when it can be got a tremendous price has to be paid for it; in fact, it is next-door to impossible to get it. Although called German rape, the seed is not grown in Germany; the great bulk of it comes from Russia, and the recent Russo-Japanese war has made a very great difference to the crop of the seed. Mr. Crisp: Why is it Germans use so much of the seed?—Good German rape-seed is supposed to contain all the necessary things to keep a Roller alive; they say, in fact, that good German rape-seed should be quite sufficient to keep any bird of this variety alive. Mr. Crisp: That is to say it is scientifically a perfect food?—Oh, well, I can't say; I'm not in the "know" of that. But rape is better for the song of the birds, as the use of Canary seed makes the Roller go harsh. Apple is also very good, and is often used.

Good Hens Badly Wanted.

In reply to a question asked by Mr. F. Lathleiff, Mr. Norris pointed out that the great thing was to get good hens. Otherwise breeding results, so far as the breeding of winners was concerned, would be poor. One could buy a cock and pay a nice price for it; and he could tell whether it was a good one by listening to its song. But one might pay a high figure for a "hen" and never know how it would turn out; it might, and often did, turn out to be a cock. (Laughter.)

Mr. A. Wheller asked if it were not possible to test rape-seed by planting a few of the grains, as it grew very quickly. Mr. Norris, in reply, said it was no sure test, and as already stated, the seed was not now grown to any great extent even in Russia.

Mr. A. C. Burn: Is it absolutely necessary to have a room exclusively devoted to the variety?—Not in breeding. Mr. Crisp: But it would not be good policy, all things considered?—No; they are best bred in a room by themselves.

Mr. F. A. Pullinger: What is a fair price to pay for a pair?—Well, you cannot get a good pair for less than from £3 10s. to £4. Of course birds that have been winning fetch four or five pounds each. Mr. Crisp: Are the champion birds in this country equal to the best birds in Germany?—Well, that, of course, is hard to say. I have not yet had the privilege of going to Germany to listen to the birds for myself. One thing may be said at least, we evidently have a very musical ear, for the Germans are always complaining that we are very hard to please, and they say they can't get us anything better than we do get; so I suppose from that we have as good Rollers as they have themselves. I should say that some of our young birds are equally as good as those bred in Germany.

Teaching to Sing.

Mr. Pullinger asked a question relative to the training of young birds, and in reply to him, Mr. Norris said that training was done by Schoolmasters as a rule.

Mr. E. Fisher asked if it were true that the Roller Canary was only a one-season bird so far as the song was concerned? No; that used to be the tale some years ago, but it is not so now.

Mr. W. Page: Do you leave the cock with the hen to help feed the young?—I never allow the cocks to feed the young ones; after the hen is set I always take the cock away. Mr. Page: If you take the Schoolmaster away does it not make the young ones go harsh and hard?—Of course there may be a tendency for a bird to go harsh, as you say, but it makes all the difference where the Schoolmaster is removed to.

Mr. F. Easterling: Had that successful novice to whom you referred any special method of training his birds?—No; I asked him that question, and he very kindly volunteered the information. He had both Schoolmaster and organ, and he just trained them in the ordinary way. But he was lucky, because he had got one of *the* hens—he had got one of the few good hens to be had. Mr. Curtis: I take it all his winners were bred from the one pair.—I believe so.

The Roller's Vocal Powers.

Mr. Wynn: Are the vocal organs of the Roller Canary differently constructed to those of other varieties of Canaries? If not, is it not possible to train the Norwich or the Lizard to sing in the same way?—It is said that the vocal chords are different, but I cannot say for certain. The song has been bred into the birds for so long that I think it would be difficult for a Norwich or any other variety of Canary to pick it up; there is not the least doubt the song is purely artificial. Mr. Crisp: do you think that their vocal chords are different from use only?—Yes, I think that is so. In answer to a question asked by Mr. A. Lissenden, the lecturer stated that the Roller Canary would pick up almost any notes, and it was best to keep the bird out of the hearing of other birds altogether. Someone then made the remark, "What about the Sparrows outside the windows?" That, of course, said Mr. Norris, could not be helped; he had even known the "pink, pink" of a hen Chaffinch to be copied by a Roller.

Mr. Crisp: What time is necessary to devote to the young birds?—Well, personally, I have very little time to devote to them. I have to rely on the Schoolmaster doing his duty. There is not the least doubt that a lot of time is given. Whether it is really needed or not I can't say. The only thing is that you want to have a quick ear, and directly you hear a bird hits a false note, take him away. Otherwise there is not a wonderful lot of time needed. Mr. Crisp: If that is a necessary qualification—having an ear for music—it won't do for me to go in for Roller Canary Breeding. (Laughter).

Value of Artificial Teachers.

Mr. Wynn: When using these artificial means what is the best time in the day to start the organ?—Doubtless when you get up in the morning. A Schoolmaster, of course, starts very early—before you are awake. It is not very nice to get up at three o'clock in the morning to set the organ going; that is where the advantage of having a good Schoolmaster comes in.

Mr. Lissenden: Does the combination of Schoolmaster and organ help on to perfection? Yes; there is not the slightest doubt about it. The organ, as most of you are aware, only goes for about 20 minutes, and you would need to have someone constantly attending to it; and of course this cannot always be done.

In answer to another question, Mr. Norris said he had yet to meet the bird that could sing the notes of the organ. Mr. Easterling: But it must be far better to have both organ and Schoolmaster?—Yes, decidedly. Answering a question of Mr. Wheller's, the lecturer stated his belief that in Germany the Nightingale is used a good deal in the training of Rollers.

Mr. Crabb: From one point of view, and inasmuch as I took a first prize with a Roller some years ago, perhaps I am in a position to make a few observations. But my Roller was, I should say, exhibited in a Border Fancy class. (Laughter). They must have put the wrong number down. However, like Mr. Crisp, I don't know that I should make a very good subject seeing I haven't much of an ear for music. I have had a great idea of going in for a Roller or two, but more with a view to improving the song of my other Canaries. The throat of the Roller is not entirely different in character to that of the other Canaries; it is merely a development. As regards the hens I can quite understand that it is a great thing to get a good hen. They come over here as cocks and are often mistaken for such. I hoped Mr. Norris would have brought an organ with him. I don't know one tour from another, and I should very much liked to have been educated on that point. You go into a show and try to hear the birds, and you hardly know where the song is coming from, and you are apt to become confused.—Mr. Crabb is quite right in what he says, that there is a need for knowing the different tours. The words, schockle, bass roll, Gluck, the ordinary public does not understand. Mr. Wynn has kindly gone to the trouble of getting the two birds which you see before you, and if they had sung I could have told you something about the different notes. But they have hardly said "Sweet" yet, and are hardly likely to do more, seeing they are in a strange room, where one can hardly expect them to sing. Of course one could set an organ going and the tours could be explained.

Through a Bird-room Window.

By the Rev. C. D. FARRAR.

(Continued from page 293).

Chapter IX.: Some Necessary Precautions. (Continued.)

Never interfere with nests. Birds very strongly object to having their nests interfered with, and, in spite of what learned doctors say, often desert them incontinently if you do. Is it worth while to lose a fine nest of youngsters just to gratify a momentary though very natural curiosity? Some bird keepers are like the late Dean Stanley, never so happy as when peeping into some long forgotten tomb in Westminster Abbey to see what was buried therein. The only bird that will allow you to look at his home, as far as my experience goes, is the Budgerigar. You may lift down his cocoanut lusk and peep, but I would not advise you to go any futher, even with him. In the case of other birds, the only way is to walk casually by the nest and try to see what you can in passing, and try to arrange that the parents shall not see you; rather a difficult matter, by the way!

Poor Pussy!

Make things unpleasant for cats. They delight in sitting on top of the aviary wires for hours watching the inmates. When this is permitted, it is useless to expect any breeding results. A good garden squirt is very efficacious in such cases, but a nice little air-gun is more certain. Have the grave dug all ready beforehand; the quicker the funeral the better it will be for your happiness and peace. Needless to say, it should be a "nameless and unhonoured grave."

If a bird gets out, don't worry. Let it alone, and, like the celebrated lamb that Mary had, it will come home and bring its tail behind it. I have had Zebra Finches flying about for days in the garden, but they always asked to be let in sooner or later. I have had Blue Bonnets soaring overhead, rejoicing in their freedom and saucily jeering at me as they passed. I said nothing, but waited coolly. I knew that hunger is a wonderful tamer, and poplar trees, although lofty and nice to roost in, are not sustaining to the Parrakeet stomach. I get up very early the morning after the escape, and generally find the truant running frantically about on the wire on top of the aviary seeking for a hole to get in by.

Keep Cool.

I get a ladder, unfasten the wire at the joining of two lengths, turn it nicely back near the place where I saw the bird sitting, and then retire and watch events from a safe distance. In about a quarter of an hour I see my escaped friend fly down silently on to the roof and begin running eagerly up and down, his mates wildly calling to him at the time, and no doubt telling him he has acted the silly goat long enough. Presently he espies the hole I have made, pops though it, like a mouse, and I simply go and fasten down the wire and go to bed again. Rush about shouting and wildly waving a net, and you simply scare the bird right away, besides making yourself dreadfully hot and uncomfortable.

In the case of an escaped Softbill, different measures will have to be resorted to. If one of these gets out into the garden, more tact and patience will be required, especially if it be summer and cherry time. Then the escaped one is in clover, and will defy you for a week. I had a rare Starling escape one cherry time, and a nice job I had to catch him. Morning after morning I rose before it was dawn, crept down into the garden, and sat shivering on the dew-laden seat, with a rug around me. About 3 a.m. I would hear the escaped one utter a jubilant call note, and perhaps, if he felt very contented with himself, pipe a few staves. Then, as I watched warily, I would see him fly across the lawn to the kitchen garden and alight on the strawberry bed. There he no doubt had a nice feed, though, of course, I could not see him. The moment I got up and went near, he was off and away to a neighbouring wall, where he gave out a few exultant notes by way of "grace." He then usually flew away to some distant clump of trees till about dinner-time, when he returned once more for a further feed.

In the middle of some abstruse bit of study, one of the children would rush frantically into the study and tell me that the bird was sitting in the cherry tree, eating like mad. I would go up to the nursery window, and sadly contemplate him. He was not ten feet away, as the cherry tree top is on a level with the nursery window. It was a case of "so near and yet so far." After a good feed he once more retired, no doubt to sleep off his debauch, and was seen no more till supper-time, when he honoured the cherry tree once more. This went on for a week, till, in fact, the cherries were done. Then, as of old, there began to be a sore famine in the land, and my gentleman began to be in want. For, strangely enough, no foreign bird that I know will eat the common or garden worm. Hence, when the fruit harvest fails, things grow unpleasant. Now was my opportunity. I caught the hen and took her out into the garden in a big cage and set her down near the strawberry bed, and round the cage I constucted a big sort of wire-netting enclosure, roughly put together with stakes and securely tied with binding wire. At the botom I turned up the wire in a small half-circle. I did it at the bottom for this reason—that I knew my friend would try to get in from below, and not, like a Parrakeet, from above.

Stomach Love.

Presently, sure enough, I saw him fly across the garden and alight near the enclosure and hold a little animated talk with his mate. No doubt he told her how empty he was feeling, and she would doubtless tell him that she could not understand why he preferred running about hungry to a generous and comfortable meal. For some time "stomach" held out, but presently resistance was evidently weakening, and once or twice I saw him very near the opening. It was a Sunday morning, of all things, and I had, of course, to go to church. I left orders that the cook should keep a sharp look out for eventualities. On my return home she told me that she thought the bird had gone into the wire cage, and on going to look, sure enough, there he was, quietly sitting on a perch I had thoughtfully provided for him near the top. I did this, like Jehu, out of subtlety, as I knew that he would be sure to mount to a perch if there was one, and that he would sit there if not disturbed till I came to carry him back to captivity; whereas, had there been no perch, he would have run about on the ground, and as likely as not come out of the hole by which he had entered. A bird, whenever you approach it in an enclosure, invariably makes for the top. I, knowing this, acted accordingly, and before dinner my truant was safe with his wife in his former home.

Incubated Birds.

A very needful precaution is to have an acclimatising cage for newly-come-over birds. I believe I am the proud inventor of the article; but I will not take out a patent, but will give my invention for the benefit of the bird-loving world.

Necessity, they say, is the mother of invention. It was so in this case. I had lost so many delicate, newly-imported birds that I had become desperate. I had seen incubator babies at South Kensington; why not incubated foreign Finches? The difficulty was the heat. It must be constant, cheap, and not excessive.

I set my inventiveness to work, and here is the result. I got a good big travelling-cage, such as most large dealers supply. In the bottom I cut a big round hole, and over this I nailed a piece of perforated zinc. I then got a big biscuit tin, cut a hole in the bottom corresponding to the hole in the cage bottom, and bored some holes round the bottom of the tin for ventilation.

Under the biscuit tin I placed a potted-meat pot filled with olive oil and a floating wick, such as we use in sanctuary lamps in church. I then put the bird into the cage, with food and water; lit the wick, and a grateful and comforting heat rose, and when I used it on a frosty night, I could see, instead of half a dozen little trembling and half-frozen Bichenos, six little white waistcoats in a row, tinged with the ruddy light of the wick, and testifying by their pleasant twitter that they thoroughly appreciated my efforts on their behalf.

The method is simplicity itself. With good oil, a wick will burn for twelve hours at very little cost. If you can get ten-hour night-lights, they will do equally well; only stand them in water. The fumes are so slight that they never affect the birds. Continue the treatment till the weather grows warm. Australian Finches generally come over in February, and unless treated as I advise, the deaths will be appalling.

Chapter X; The Bearded Tit.

The Bible story tells us that Saul, the first King of Israel, seeking his father's asses, found a kingdom; so I, whilst rushing after some White Jackdaws stumbled upon my Bearded Tits. It happened "thusly," as poor Artemus Ward was wont to say: I was in London for a few days, and had almost come to the end of my tether. It was Friday morning and I had to go home that evening. I happened to see an advertisement offering for sale a pair of White Jackdaws, at a place somewhere in the West Central district. I hailed a hansom and away I drove to the address indicated.

The person who opened the door was clearly a "furriner," who eyed me with evident suspicion, and informed me in broken English that there was only one White Jackdaw, not a pair, but that she could get me a pair from Germany. Dissembling my wrath as well as I could, I asked if I might see the one and only bird. Permission was graciously given, and I was conducted downstairs to the basement (inwardly trembling as I thought of Coram Street murders), and there I saw a very dirty and disreputable looking bird. He reminded me strongly of the Jackdaw of Rheims after the Cardinal had done with him! I said as many complimentary things as I could about him, but regretted my inability to buy a "love-lorn crittur."

A Find.

A noise in one corner of the room attracted my attention, and turning in the direction of the sound, I saw four small birds in a cage. I was obliged to ask what they were, as the darkness was Stygian, and I was told that they were Bearded Tits "from Germany." Barring the fact that they had lost their caudal appendages they looked the picture of health, and were manifestly two cocks and two hens. Knowing that Bearded Tits are none too easy to acclimatise, as we say up here, I determined to buy one pair.

I did not, you may be sure, select the second best; and having paid the modest price demanded, I passed them into a travelling cage and was just about to depart when the lady inquired if I knew how to feed them. It was, no doubt, kindly meant. I modestly replied that I had had a brief experience with soft bills. Would I like some of the food she gave them? It looked to me so like linseed meal that I declined to invest in any, though in justice I must say the Tits looked well on it. I fancied, however, with the conceit natural to the beast, that my own was better. The lady smiled a pitying smile, as much as to imply that the Tits and myself would soon part company. For once, at any rate, she proved herself a false prophetess, as they lived for many a long and sunny year.

WILD BIRD LIFE.

Doings of the Lapwings.

The doings of the Lapwings just now are full of interest. They have moved to the higher ground, and are busy selecting their partners for the breeding season. Some have already done so, while others (probably the younger birds) are only in the initial stages of love-making. These latter may be distinguished by the peculiar action of the cock bird. He and the object of his choice are feeding somewhat apart from the rest of the flock; some yards separate the pair, which distance he is anxious to decrease. But when he attempts to do so she moves off to one side. Shooting into the air he swoops down close to her, and up again, repeating the performance with some wonderful exhibitions of wheeling and tumbling flight, accompanying this display of wing power by soft piping notes. A curious love-making this, but one no doubt calculated to charm the wayward lady Plover. After a few days of such doings he will entice her to leave the flock. This is not accomplished easily, and many journeys are commenced and spoilt by the hen bird returning before he can finally persuade her to share her lot with him and seek some quiet field or pasture land. Although gregarious, each pair has a certain area of ground to themselves, and if one is able to get access to a breeding colony during next month, one can note with interest the doings of each couple, according to their condition. A pair with eggs will go through all the wonderful evolutions for which the birds are famous, and do all in their power to draw the intruder away from the vicinity of the nests. Others are scratching holes in the soft earth, testing many sites before finally deciding upon the ideal spot. Upon pasture land the nest of the Lapwing is most difficult to locate, the greenish mottled eggs harmonising so well in their surroundings.

Pheasant and Stoat.

A cock Pheasant has been known to kill a stoat, jumping upon and spurring it in the manner of two cock birds fighting.

What Causes White Blackbirds?

The capture in Yorkshire of a Blackbird "with black and white wings," has led a Sussex correspondent to ask, in a contemporary, if others have noticed that since last breeding season, birds—especially Blackbirds—with partially white plumage, have been quite common. He gives several instances, and adds:—"The only cause that I can advance for such common prevalence of albinism is our late lamented cold damp summer. White plumage to an abnormal extent in birds is usually held to be due to some constitutional defect, and it occurs to me that an inclement season, by reducing the vitality of the parent birds at mating time, and that of the offspring, as well at a later date, may have produced these unusual results in their plumage."

High Flight of Birds.

Many have credited birds with the power of flying at tremendous heights, but from observations made by balloonists it appears that one thousand yards above sea level is the favourite height for the flight of large flocks, when probably migrating. Occasionally exceptions have been noted; one is that of an Eagle at the extraordinary elevation of three thousand yards, a Skylark at nearly two thousand yards, and Crows at five hundred yards less. It appears impossible for birds to fly at the tremendous elevation recorded by some writers. There would be great physical exhaustion in flight in such rarified air, besides which there appears to be no reason why the inhabitants of the air should exceed more than one thousand yards. There is no crowding at that elevation, so that large flocks can move easily.

Woodpeckers and the Telephone Poles.

A peculiar case of destruction by Woodpeckers has occurred at Boughton, near Canterbury, where twelve telephone trunk poles, each measuring nearly a foot in diameter, have just had to be replaced, owing to the depredations of these birds. The Woodpeckers had pierced holes several inches in diameter right through the poles. In one of the holes a Woodpecker's nest was found. The poles destroyed had only been in position twelve months, the previous ones having been similarly bored through, although they were creosoted. The poles have now been cased with metal. It is a singular fact that the destructive action of the Woodpeckers is restricted to this one portion of the road, extending to about a dozen poles, and this is the only spot known to the Post Office which has suffered such severe depredations in East Kent.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

Advertisements continued from page 346.

MAINLY CANARIES—Continued.

FOUR Yorkshire hens, 10 -; or exchange Yorkshire cock or crest-bred hen.—Elwis, 13, Hicks-st., Neepsend, Sheffield.

TWO pairs Yorkshires left, 15 -, 20 -, yellow cock, 10/6; ready to nest. Exchange cycle.—Rand, Hanson-st., Redcar.

WINGMARK Norwich hen, greenmark Yorkshire hen, exchange for Norwich cocks.—147, Copenhagen-st., King's Cross, N.

BIG 1907 Norwich cock, 20/-; exchange pair Borders or two hen Lizards; must be good.—Thompson, 146, Alfred-st., South Shields.

EXCHANGE good 1907 Buff Norwich hen for Goldfinch, or sell 5 -; approval both ways.—Loader, 38, Bath-st., Abingdon, Berks.

WANTED healthy hen Canary; exchange good pearl pocket-knife, warranted hand-forged blades.—Gill, 2 in 2, Eldon-st., Sheffield.

GOOD Buff Norwich cock, 5/6; exchange good Yellow Norwich hen; hen sent first.—Jos. Bland, Aldwincle, Thrapstone, Northants.

EXCHANGE or sell 1907 Norwich songsters for large 1907 Norwich hens for stock purposes.—Simpson, 13, Hockham-terrace, Kings Lynn.

WANTED, Rollers, well-bred pup, or offers, for two good yellow York hare cocks, value 10/6 each; mutual approval.—11, Newton-rd., Oxford.

EXCHANGE pair of Yorkshires for pair of Norwich Plainheads; approval both ways.—Brett, Stables, Beckenham Park, Beckenham, Kent.

WOULD exchange a good singing Canary for two pairs of boys' boots, size eleven; approval.—Metcalfe, 105, Silverdale-avenue, Tinebrook, Liverpool.

CREST-BRED green cock, two years, 10/-; exchange good Yellow Norwich hen; on approval.—Cannon, Boot Maker, Stricklandgate, Kendal.

EXCHANGE black and blue Dutch does and bucks, also Belgian doe, stinck by winning buck, for Canaries, or offers.—Easton, Frieston-rd., Boston.

CLEAR cock Canary, large double breeding cage, seed trough, egg pans, nest boxes, all complete, as new, sell 7/6; exchange.—A. Green, Chapel House, New-st., Daventry.

WILL exchange pair good Yellow Yorkshire Canaries for Seifert Roller, Schoolmaster (good); approval one week.—Mr. Priestley, 44, Sturton-rd., Pitsmoor, Sheffield.

TWO pairs Canaries, Norwich pair, Canary-reared Greenfinches, house-moulted cock Redpoll, hen Bullfinch; exchange cycle or phonograph.—Fenton, High-st., Clown, near Chesterfield.

HANDSOME Yellow Yorkshire cock Canary, full song, splendid double breeding cage, 15/6; crested variegated cock, large double breeding cage, 14/6; exchange.—Letall, Whittlesea.

FOR stock, monster clear Yellow Yorkshire cock; Bailey's and Swanger's strain; sell or exchange large yellow unflighted Norwich cock; Norwich first.—G. Swift, Ward's End, Starkholmes, near Matlock, Bath.

CLEAR yellow Norwich hen 10/-, variegated ditto, 8/6; buff clear 6/6; heating apparatus 20 -; morning coat and vest 17/6; recently cost £2 2s.; wanted, cycle or useful exchange.—Atkinson, Market Place, Guisborough.

SIXTY-EGG "Cooper's" incubator, good hatcher, 30/-; 60-chick rearer, wire and glazed runs, 25/-; will exchange for high-class Canaries, Yorkshires preferred, breeding cage and aviary.—100, Haydons Park-rd., Wimbledon.

CHAMPION Yorkshires, no rubbish, Bailey's strain, 15/-, 17/6, £1 pair; sell or exchange for scrap copper and brass, or two crest-bred yellow hens, or anything useful: stamp reply.—Cooper, Taylor-st., Batley, Yorkshire.

WHAT offers in Norwich for 3 Hartz Mountain Rollers, variegated, good songsters; would also like to exchange large Greenfinch cock, proved muler. Have a grand pair of Border fancies to exchange.—Inkpen, Queen-st., Gravesend.

THREE good Yellow Norwich hens, 7/6 each; Fountain pen, 10/6; pair cloth trousers, jacket and vest, 12/6; exchange lot for 1907 common German Canaries, cocks and hens, or muling pairs.—Lovegrove, 83, King's-rd., Henley-on-Thames.

EXCHANGE one Yellow clear Yorkshire, 1907, 6½, one clear Buff 1906, big fine stock bird, one Buff ticked crest-bred, big fine stock bird; Stringers, Bolton; all healthy, ready for breeding; all prize bred; for Yorkshire hens, Yellow, Buff and Buff Green; must be big and healthy.—Avisine Co., Millom.

Mainly Foreign.

To be Sold or Exchanged

PAIR breeding Budgerigars for pair Canaries, or British cocks.—C. Groves, 6, Belgrave Mews, West London.

PAIR cock Budgerigars, in grand plumage; exchange Canaries or anything useful.—Gardner, 3, Butler-st., Preston.

TRUE pair Budgerigars, nesting; exchange Yorkshire cock, or Norwich.—James Harmer, Belle Vue Hotel, Woodhouse-lane, Wigan.

COCK Gendia Conure, 15 -; do, Moustache Parrakeet, 5/6; do, Quaker Parrakeet 5/-; exchange Talking Parrot, or offers; approval.—Hughes, 86, John-st., Nanty-Moel, Glamorganshire.

Miscellaneous

Sale or Exchange

WATER RAIL, cal or exchange, offers.—Pinder, 50, Lamprell-st., Bow, London.

BARLOW, Greenwich, exchanges your surplus live stock for other fancy you require.

EXCHANGE cage front, any size, for Canaries.—Baldwin, 10, Marroway 1, Birmingham.

NELSON'S Coloured and 180 designs, including specials, for good Norwich.—Brooks, Lutterworth.

WHAT offers in exchange for grand fawn whippet bitch, very fast; sell 10 -.—Bardsomow, Dunstable.

STRONG wood cage, exchange Canaries.—Pinner, Lancaster Saloon, Doncaster-rd., Enfield, Middlesex.

EXCHANGE 1 cwt. of chadlock seed for British bird or show cage.—J. Wilson, 10, Market square, Berwick.

EXCHANGE large aviary, 6 ft. by 2 ft., for Canaries, small parrot, hoop, anything Cresswell, Thornley-rd., Leyton.

DOUBLE barrel, 9/6; Canary cage, 2/6; exchange Norwich, Dobson, Parker L., Crosshill's, Keighley.

VIOLIN and case, exchange for good Talking Magpie, or offers.—Bunyan Clark, Gilbert, Raunds, Northants.

FIELD glasses, leather sling, case, 10 -; exchange cock Canary.—D. Griffith, Gwyndy, Llanbedr, Merioneth.

NOTICE TO ADVERTISERS.

The ONLY Address of this Journal is 154, FLEET STREET, LONDON.

A supply of addressed envelopes will be sent free on application.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the seuder after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage ono way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6 according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

THE "DURABLE" WIRE FRONTS.
If you require a really first-class front of superior manufacture, I can satisfy you. Postcard me the inside measurements of cages, and I will quote price per return. Perfect fit guaranteed.—J. Walmsley, 6, Brand-st., Nottingham.

JOHN A. REECE,
Established 32 years; awarded 28 medals and diplomas. Fanciers are weary with the sensational bargains, eye-openers, tin openers, and cages whose low price is their only attraction. Fanciers want smart up-to-date cages, reliable cage fronts, etc., and can procure same by sending penny stamp for illustrated catalogue.—Jockey Wire Works, Colston-yard, Bristol.

IMPROVED PUNCH BAR FRONTS.
Sizes stocked:—12 by 12, 3d.; 14 by 12, 3½d.; 16 by 12, 4d.; 20 by 12, 5d.; 24 by 12, 6d., other sizes equally cheap; metal enamelled seed boxes, 4 in., 2½d., 6 in., 4d.; wood, 4 in., 2d., 6 in., 3½d.; bright punch bar and cage wire, etc., show cages, baths, nest pans, egg drawers, nest eggs, bird sprays, cages of every description made to order; all goods guaranteed to be as represented or money returned; lists free.—T. A. Fox, St. Helens.

FOR JOINER-MADE CAGES CHEAP.
Breeding cages, single, 18 inches long, 15 inches high, 1/9; 26 inches by 15 inches by 11 inches, 2/10; double, 36 inches by 15½ inches by 11 inches, 4/6; 3-compartment, 40 inches, by 15½ inches, by 11 inches, 5/6; any size made equally cheap; remember made by experienced joiners only, these cages have given satisfaction in the past, and are much improved this season; list of 51 sizes free.—Pass, Cage Maker, 48, Annesley-rd., Hucknall, Notts.

570 CHALLENGE BREEDING CAGES
were sold by me last season, and not one deposit was returned; for proof, write to Editor of CAGE BIRDS. They are made from selected planed pine boards, black enamelled outside, blue inside, sliding partitions, sand trays, nest boxes, seed hoppers, and loose wire fronts; 18 inches, 2/-; 20 inches, 2/6; double, 33 inches, 4/-; 36 inches, 4/6; any size cage to order. Remember, these are made from pine boards, not soap boxes.—Henry Morris, Cape Hill, Birmingham.

RINGS The Oldest Ring Maker in The World.

My 1908 improved rings are now ready, also my Pedigree Books. These rings are the finest ever put on a bird's leg. All the numbers are embossed, and not same as all other makes, stamped in; therefore cannot fill up with dirt; all edges are neatly rounded. They are not cheap flimsy rings that birds can nip to the leg and cause inflammation, as many a good bird has been lost through cheap rings. Prices as before, 6d. per dozen, 5/- per gross. Pedigree Books, 6d. each. Agents apply at once; enclose stamp for terms.

THE IDEAL BREEDER,
If you want a good, sound serviceable breeding cage, kindly give me a trial. All cages sold by me are guaranteed to be built throughout with first quality pine by practical men; not thrown together by boys. Single breeders, 20 in. long, 15 in. high, 9 in. wide, 2/6 each; 22 in. long, 3/- each; 24 in. long, 3/6 each; double breeders, 36 in. long, 15 high, and 9 wide, sliding division, 4/6 each. All fitted complete with loose fronts, sand drawers, planed inside and out, and pediment tops. Singing box cages for Canaries, Goldfinches, Linnets, etc., 1/-, 1/3, 1/9, and 2,- each; cottage-topped Thrush cages, 2/6, 3/-, and 3/6 each; nursery cages, 6d. each; bow-fronted Lark cages, with two brass bands, 2,6 each; hanging cages for Canaries, all metal, with cut glass round, and opal feeders, 3/6 and 4/6 each; solid brass ditto, with ruby cut glass and richly ornamented base, 5/6, 6/6, 7/6 and 10/- each; indestructible Parrot cages, round, 4/6, 5/6, 7/6, and 10/6 each; square ditto, 10/6, 12/6, 15/-, 17/6 and 21/- each. If you want a fully guaranteed article, I can supply you, but if you want a treacle-daubed eyesore that the wires will fall out of, don't order from me, as I do not make them. All cages sent on approval at my risk; cash or deposit; and so confident am I of their supremacy over others that unless purchasers find them exactly as represented I give them permission to smash them up, and I will refund their money. Will imitators please copy? See British Birds also Roller columns.

CHAMPION SIBERIAN GOLDFINCHES.

Important Notice.—I have a splendid consignment of Siberian cock Goldfinches. These are extremely large, with deep scarlet blaze. Beautifully buttoned wings, and in splendid condition. All on six days' approval. They make mulers and show birds—6/6, 8/6, 10/6.—Wm. Shaw, 97, Essex-rd., Islington, London, N.

LINNETS, LINNETS, LINNETS.

Large Lancashire cock Linnets, all red-breasted, nut-brown backs, and all well on seed, 1/- each, three 2/6, six 4/-, 7/6 dozen; special selected for showing and muling, 1/6, 2/- each; Red-breasted Redpolls, 1/- each; selected cock Greenfinch, 1/- each; singing cock Larks, 1/-; seed crushing mills, 1/6, two 2/6; patent syringe, work with ball and pipe, 1/9, postage free; Norwich cocks, in full song, from 7/6 each; singing cock Canaries, 5/6, 6/- each.—Matt. Hopkins, Bird Specialist, Fylde-st., Preston, Lancashire.

HARRY ALLEN,
THE ORIGINAL LINNET KING.

Champion of all Champions; patronised by all the leading exhibitors, mule breeders and contest singers; beware of spurious imitations; big fine cock Linnets, well pencilled, very tame, 1/6, 2/- each; extra picked birds, real gems, 3/- each; big broad-chested cocks, picked specially for muling, 2/6; contest Linnets (house-moulted), specially for muling, 2/6; contest Linnets (house-moulted), specially trained for contests, and can win, 8/6, 10/6, 15/6 each, including contest cage; Siberian cock Goldfinches, real gems, 6/- and 7/6 each, must be seen to be believed. I have hundreds of every kind of British in stock; all been caged months; not direct from the catchers' nets; all my birds are on 7 days' approval; cash or deposit. Notice to trippers; the best meeting place in Leeds is Harry Allen's Bird Stall in the Market. Everybody welcome to hear the Champion of the World. State wants; correspondence a pleasure.—Harry Allen, Bird Specialist, City Aviaries, Beckett-st., Leeds.

MATTHEWS, LINNET KING.

Exhibitors Mulebreeders and Contest-singers.—I have a finer stock of British birds than any two dealers in England, and am patronised by all the leading judges, contest-singers, and mulers, as they are satisfied who keeps the largest stock, and the very best, all at working-men's prices. I keep every variety, so state your wants, and I send them on seven days' approval at my own risk. I have a grand lot of Linnets, well pencilled, steady, nut-brown backs, 1/6 and 2/-; a few real Giants for keenest competition, 3/- each. Bargains. I have the finest lot ever seen; all guaranteed ready for mule-breeding; good large, healthy Linnets, good nut-brown backs, breasts like blood; blue beaks, in full wild song, only 2/- and 2/6 each. Those intending mule-breeding should send at once for one of these special birds. I have also 200 Linnets in full song; been trained under my old, well-known Cheshire champions, 2/- each, with polished singing cage, instructions how to feed, also packet of Mixture, 3/- lot. Also a nice lot of moulted Linnets in full song, ready for contest, at 3/6 and 4/- each; worth double. Goldfinches: Goldfinches; a grand lot, with deep square scarlet blaze, well buttoned, and mooned, 5/- each; large for muling, 4/- each. Bramblefinches: Real Toppers for keen competition, 1/- and 1/6 each; also a few house-moulted, finger-tame, sure mulers, 2/6 each. A few moulted Linnets, in full song, with hen Canary, 5/6; two pair, bred mulers last year, 6/6. Linnet and Norwich Canary, 4/6; Greenfinch and Canary, 3/6; two Greenfinches, bred Mules, 2/6 each; Twite and Redpoll, 2/6; Bramblefinch and Chaffinch, 2/-. A few grand Twites for showing, 1/6 each; also large Giant Yellow Greenfinches, 1/- each; Yellow hens, 6d. each; one house-moulted Goldfinch, father of six Mules, 6/6; or any kind of British you require. Hundreds in stock, and all these special birds are in full song, finger tame, been caged since Christmas; not fresh caught rubbish same as most dealers send out, so beware of imitators, who, as you can see, are copying me. Postcard before birds. I have over 400 testimonials open for inspection; all received since August; so don't delay. Send your money to the Editor and your orders to me. That is all I want. I am sure to satisfy you, all at my own risk. Cash or deposit.—Matthews, Bird Specialist, 44, George-st., Hyde, Cheshire.

LINNET FANCIERS' GUIDE.

Contest Singers. — I have 1,000 special books now ready with secrets how to feed and train for contest singing, to make them sing at each other, when you want, how to Mule-breed, how to Hybrid, how to sex, how to keep your British in perfect health and song; also other useful items; lifetime experience; only 1/2, post free, from Matthews, Linnet King, 44, George-st., Hyde, Cheshire.

Read the following. One of the latest to bear out our statement from numbers received during the last few days :—

Stoke-on-Trent. Have been taken in so many times.

Stoke Workhouse, London Road, near Newcastle, Stoke-on-Trent, 17th March, 1908, writes :—I am thinking of trying you (Mackley Bros.). I am sorry to say that I have been taken in so many times It don't give me much faith to trust anyone. I want a pair of good Norwich that will do me some good. Yours truly, Thos. Finikin to Mackley Bros.

(After Order Executed.)

The Best he has seen for a very long time.

Stoke Workhouse, London Road, near Newcastle, Stoke-on-Trent, March, 21st, 1908. Birds arrived in the pink of condition this morning. They are a grand pair; your dealing is most straightforward. I can assure you they are the best that I have seen for a very long time. They look like a pair which should turn out some very good youngsters. Thanking you for sending such a pair. Yours faithfully, Thos. Finikin to Mackley Bros.

It is a well-known fact no person can give the quality we can. All our customers are more than surprised at the marvellous value we are sending.

The safest and most reliable house in the Kingdom.
Awarded 9,000 prizes. A world's record.

Under the distinguished patronage of H.I.M. The Empress of Germany and The Sultan of Turkey

THE BEST SHOW

Some jealous people may doubt it, or wish to contradict it. But it is open for your inspection. A visit to my specially constructed bird rooms, built in the open country, will prove to the most sceptical person that I have by the far the best Show of Canaries ever seen in bird rooms. My Stock includes many winners at Leading Shows, every bird is full quality and the right type, and my prices are within the reach of all. Having over 1,500 birds to select from, I can offer you odd birds or properly matched pairs that will give you every satisfaction. Call and inspect my stock or let me send you birds carriage paid on 7 days' approval at my risk. For quality and cheapness combined I stand alone.

Feeding and Mating Hens, in breeding condition, **3/-, 3/6, 4/6, 5/6** each.

Cock Linnet mated to Hen Canary for Mule Breeding, **4/-, 4/6, 5/-, 6/-, 7/-** per pair.

If you doubt the quality of my birds, read a few of the many thousands of unsolicited testimonials I receive every season, originals of which can be seen at my office, all bearing official postmark. Note the dates.

Fair Hill, Haltwhistle, March 28, 1908.—Received birds this morning; I am very pleased with them; they are a finer pair than I expected for the money; I shall be sure to get more from you.—M. Neill to Miss Storey.

58, Townshead, St. Stevenstown. March 28, 1908. —Received Norwich hen last night. I am highly satisfied; she is splendid value for the money.—J. Wilson to Miss Storey.

1, Howls Terrace, Londonderry. March 27, 1908.—Bird arrived in splendid condition, for which I thank you. It is honestly worth double the price I paid; your prompt attention does you great credit. —W. Causlin to Miss Storey.

12, Primitive Place, Beaufort, S. Wales. March 28, 1908. — Received birds quite safe, with many thanks. I consider them first class birds at a very reasonable price.—H. Rouse to Miss Storey.

Loansdean Cottage, Morpeth. March 28, 1908.—Yorkshire cock arrived in pink of condition; he is the right sort to breed high class birds. Thanking you for sending such a good bird.—B. Clark to Miss Storey.

113, Secret Row, Steventon. March 28, 1908.—I received birds on the 24th. They are doing well —in fact, you could not have sent me better and healthier birds; they are beauties; well worth the money. Thanks for your straightforward ways of dealing.—J. Gilmour to Miss Storey.

Wigan. March 27, 1908.—Birds arrived in good health; they are a splendid pair for the money; many thanks for prompt attention.—J. Pilkington to Miss Storey.

123, Bucknall Road, Hanley, Staff. March 27, 1908. —The Yorkshire cock I received from you is a bird to be proud of. I may state he is really a good bird, and is all you state your birds to be; you can always rely on my patronage.—W. Grains to Miss Storey.

I could fill the whole of this paper with genuine unsolicited testimonials, and I trust the above will induce you to send me a trial order, which will be the means of ensuring your patronage and that of your friends for the future. Travelling cages for journey 2d. each. I send all Canaries carriage paid on 7 days' approval. Full illustrated price list post free.

Miss E. L. STOREY, BIRD SPECIALIST

CROWLE, DONCASTER.

GOING ABROAD.

I have purchased the entire stock of a successful Norwich breeder, who is going to Canada, and offer, whilst they last yellow and buff cocks, at 10/6 each; hens, 6/6 each; also a few Crests and Crestbreds, at 20/- each; a rare opportunity.—W. Turner, 2, St. Giles-terrace, Norwich.

SANDIFORD'S FAMOUS NORWICH.

SPECIAL OFFER!

Having selected my breeding stock, 20 Good Pairs at 20s. & 25s. pair, on approval, all guaranteed from my wonderful strain. Some grand odd cocks and hens.

Breeders 27 years

J. SANDIFORD, Canary Breeder and Judge,

PRESTON, LANCS.

GRAND LARGE NORWICH.

Notice.—Write or call, and see my splendid stock of Norwich These are grand, large, round, chubby Bullfinch type birds. I have a large stock of every colour. Every bird feather like silk and in splendid condition. Every cock warranted singing; all on six days' approval, on receipt of P.O., or deposit note. Yellow cocks, 8/6, 9/6, 10/6, 12/6, 15/6, buff cocks, 8/6, 9/6, 10/6, 12/6, 15/6, Yellow hens, 3/6, 4/-, 4/6 5/-; buff hens, 3/-, 3/6, 4/-, 4/6.—Note the address, Wm. Shaw, 97, Essex-rd., Islington, London, N. Five doors from Cross-st., green cars pass the door.

J. BERTIE,

cage bird judge, has one of the finest collections of Norwich in the Fancy, but at present has not much time to exhibit. But can supply sure winners and stock birds at very reasonable prices. Those short, stout, deep-chested ones, with tail and wings to match, good size, with grand head, and well filled in neck. The kind that do win under a judge that knows his business; stamp; approval with pleasure.—The Cottage, Steedman avenue, Mapperley, Nottingham.

A. E. SILK

Has still some grand pairs of Champion Norwich from this strain, which is well known throughout the British Isles. Some exceptional pairs at **40/6**. Also grand pairs, **25/6, 30/6, 35/6**. Some charming Yellow Hens, **15/6** to **25/6**. Slashing Yellow Cocks, **15/6, 20/6, 25/6**. Some of the very best Buff Hens, short and thick set, the right sort, **12/6, 15/6, 20/6, 25/6**. Buff Cocks, **12/6** to **20/6**. All in grand condition. No bounce here, but genuine honest value.

APPROVAL WITH PLEASURE.

Note.—To save disappointment don't delay.

A. E. SILK,

WHITSTABLE.

breeder and trainer. Finest strain of Rollers in the country; trained to perfection, 7/6, 10/-, 12/6, 15/- upwards; cash or deposit.—F. Cartwright, 15, Fairfield, Kidderminster. Established 1888.

CAN I SEND?

Can I have the pleasure of sending you a genuine, highly-trained Roller, carriage paid to your address, on seven days' approval, at my risk? I undoubtedly have the largest stock of singing Canaries in England. High-class St. Andreasberg Rollers in full song by day and artificial light, with long, waterbubble runs, harp, bell and gong notes, long, deep, hollow rolls, etc., etc. Prices according to quality of song, cocks, 8/6, 10/6, 12/6, 15/- each; pure Roller hens, 3/6, 4/- each; properly matched breeding pairs, 12/6, 15/-, 17/6. I also have a large stock of specially selected cock birds, in full, loud, free song. The right birds where a lot of noise is required. There are a lot of really good cheap songsters, cocks, 6/9, 7/6, 8/-, 8/6, 10/6 each. Neat, joiner made breeding cage, with brass wire front, all complete, ready for use, 2/9 each; travelling cages for birds, 3d. each extra. I have many thousands of unsolicited testimonials from delighted customers open for your inspection. I send all Canaries carriage paid on seven days' approval, at my risk. New illustrated price list of birds and cages; send stamp for postage; neat travelling cages 3d. extra. Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

CONTEST SEIFERTS.

Purest Seiferts, last season I bred with cocks that won 1st prizes open contests, at Leeds 1906, Llandilo 1907, Gateshead 1906; these are the best birds, bollow roll, deep tone strain, young from the above, cocks 15/-, 20/-, 25/-, 30/-, 40/- upwards; hens, 5/- and 7/6; matched pairs from 20/- to 80/-; guaranteed to breed young for contests; these are bred by myself. I do not keep imported stuff; all birds wearing B.R.C.C. 1907 ring; 3 days' deposit system; approval.

CORKINDALE, Breeder and Trainer, STUDLEY, R.S.O

REAL ST. ANDREASBERG ROLLERS (Seifert Strain), and PURE HARTZ ROLLERS.

Direct importer. The finest Seiferts strain from Germany, with pure Nightingale, Woodlark, Titlark, Waterbubble, and bell notes; marvellous songsters; 7/6, 8/6, 10/6, 12/- each; on approval. Now, hurry your orders up for first choice. Hens, same strain, best lot in England, 2/6, 3/-, and 3/6 each, pure bred. Hartz cocks, real beauties, like music boxes, 6/6 each, two 12/-; hens, 2/-. Wholesalers, write for terms. Proper enamelled Roller box cages, 2/-, others, 1/6. See back numbers for best testimonials ever published in this paper. Patronised by all leading judges. Established 1879.—J. Sandiford, Bird Specialist and Judge, Preston, Lancashire. Tele., 440.

HUMMEL ROLLERS.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate low roll, hollow roll, hollow bow roll, do pipe, hollow bell roll, grand round bass roll vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London.

COMMON SENSE

will tell you that unless my Rollers were all that I claim for them I could not go on advertising them, nor be able to publish such a lot of unsolicited testimonials week after week as I do. If you have been previously disappointed with Rollers you have been previously disappointed with Rollers kindly give me a trial. I care not how hard a man is to please. I guarantee to give him fullest satisfaction or refund every penny of his money. My Rollers have repeatedly been tested side by side with others costing double and treble the price from elsewhere, and never yet have I been told that mine came out second best. I hold an enormous stock of the genuine Leipzig Rollers, in full song day and gaslight, with long hollow and double rolls, sweet silvery trills, waterbubble runs, soft roulades, bell, harp and flute notes, etc., etc., and guaranteed entirely free from Titlark or any other objectionable notes, price 8/6 each; special Schoolmasters, 10/- and 12/6 each; hens of same strain 3/6 each. I also have a grand lot of pure Seifert strain contest Rollers, in full song day and gaslight, and all ready for immediate breeding. These Seifert birds excel in the deep bass and hollow bell rolls, etc., and their song can be likened to a cascade of everflowing, rippling melody, price 15/-, 17/6, and 21/- each. Seifert hens of same strain, 4/6 each. Kindly note that birds sold by me as "Seifert" strain are fully guaranteed to be the real thing—not Seifert in name only—and have been purchased from some of Germany's most eminent breeders, such as "Dinklemann," "Ohlert," "Lamm," "Meyer," and others who have won scores of contests in Germany; and documentary evidence as proof can be produced any time. All are sent on full week's trial entirely at my risk, either on receipt of cash or deposit with CAGE BIRDS, and unless fullest satisfaction is given, money refunded in full. Few more letters given below. "13, Carlisle-st., Dublin, April 1st.—Sir,—Please send Seifert contest bird. I was well pleased with Bandmaster from you short time ago.—Yours, T. Cooper." "46, Shelley-rd., Boscombe, April 2nd.—Sir,—Bird arrived safe, and am well pleased with same.—Yours, C. Tompkins." "Alexandra-rd., Abertillery, April 3rd.—Sir,—Received Leipzig Roller in pink of condition. I consider him a gem; his song is exceellent, and I think it is wonderful to be able to obtain such grand trained birds.—Yours, William Small." "Ballymena, Ireland, April 3rd.—Sir.—Roller arrived safe, and I am especially well pleased with him.—Yours, D. Kirkwood." "Hollyrd., Bromsgrove, April 4th.—Sir.—Roller arrived safe. He is a beautiful singer, and I am sure a good one. Thanking you for your kindness and straightforward dealing.—Yours, J. Gossage." "544, Garden-terrace, Leadgate, Co. Durham, April 6th.—Sir.—I am well pleased with Roller. He has been singing splendidly every day since he arrived, and seems to get better every day. Thanking you very much for your straightforward dealing.—Yours, J. Anderson." "1, Fairfield-cottages, Peasdown, St. John's, nr. Bath, April 6th.—Sir,—Bandmaster arrived safe Friday night, and singing grand at 5 a.m. on Saturday morning. I shall want two more shortly.—Yours, A. Stock." "Upper Grove, Selkack, Ross, April 6th.—Sir,—Please send following. The Bandmaster I had is a beauty.—Yours, G. Preece." "Rose Cottage, Gt. Barlow.—Sir,—I am highly satisfied with Roller I purchased from you, and should be pleased if you will forward another variegated Bandmaster.—Yours, J. Holmes." "9, Birley-st., Kirkham, near Preston.—Sir,—The two Leipzig Rollers arrived safe, and I am quite satisfied with them.—Yours, S. Camp." "6, Long-lane, Dublin.—Sir.—I am pleased with Roller, which arrived safe. I think it only right that you should know that I tested him side by side with other Rollers that cost three times the price, and he is by far a better bird than any of them. He started singing within ten minutes of arrival. You certainly deserve to be better known.—Yours, M. Hopkins." All above letters are guaranteed entirely unsolicited from people who, apart from business transactions, are entire strangers to me. See last week's CAGE BIRDS for more similar letters and then ask yourself who is the most likely man to give you highest value and fullest satisfaction. Remember, all sent on full week's trial at my risk; cash or deposit system, and money fully refunded if every satisfaction not given. I import direct, and by saving all middle profits am enabled to sell at such low prices. Plenty now in stock, but as this is the best consignment of the season, and demand abnormal, early application is advisable to avoid disappointment.

W. COPE, DIRECT IMPORTER,

131, COOCH STREET, BIRMINGHAM.

CHAMPION ROLLERS.

Notice.—I have a splendid consignment of those exceedingly musical St. Andreasberg Rollers; these are splendid day and gaslight songsters; they are delightful, with their deep bass rolls, hollow rolls, sweet silvery trills, water bubble runs, piccolo trills, bell, sharp and gong notes, etc.; these are splendid quality, and are certain to please you; all on 6 days' approval, on receipt of P.O., or you can deposit the amount with the Editor, 8/6, 10/6, 12/6, 15/6, hens to match 3/-, 3/6, 4/-. Inspection invited. — William Shaw and Son, 97, Essex-road, Islington, London, N.

NO SIBERIANS LEFT.

E. Power has only 400 pairs of Cutthroats, Combassous, Cordon Bleus, Waxbills (red and orange cheek), Grey and Green Singing Finches, Ribbon Finches, Bishops, Silverbills, Bronze-wings, etc., left; all arrived in the pink of condition. Price all at 2/- pair, or 9/- dozen, mixed. Also just received the first special consignment of No. 1 Bohemian Rollers, specially imported from Boheme, Austria-Hungary. I defy any class of Canary to equal it in its mellow singing; each bird been trained by the flagolet and organ, with most melodious tones, and have 20 distinct changes of song. People that are fond of a good musical box, have their chance now to purchase a real Schoolmaster for rearing their young birds. Special cold room kept for these songsters. Note, these should be heard to be believed; there is no bluff about this. You will oblige by visiting my premises and hear them yourselves before purchasing elsewhere. Price, 12/6 each. German tame Bullfinches (Pipers), pipes most magnificent tunes; price, 10/- each, a bargain. If these birds do not pipe tunes, I will willingly return money. No. 1 Hartz Mountain Rollers, £2 10s. per stick of seven. These are not imitation No. 1's, as other dealers advertise them at less price than they can be imported from Germany. No. 2 Hartz cocks, £2 9s. per stick of seven. No. 3 Hartz cocks, £2 2s. per stick of seven. Genuine Hartz hens, guinea a dozen. 3,000 Canaries in stock; to be seen and heard, and no bluff.

One and Only Address—

91, SCLATER STREET, SHOREDITCH, E.

ESTABLISHED A CENTURY.

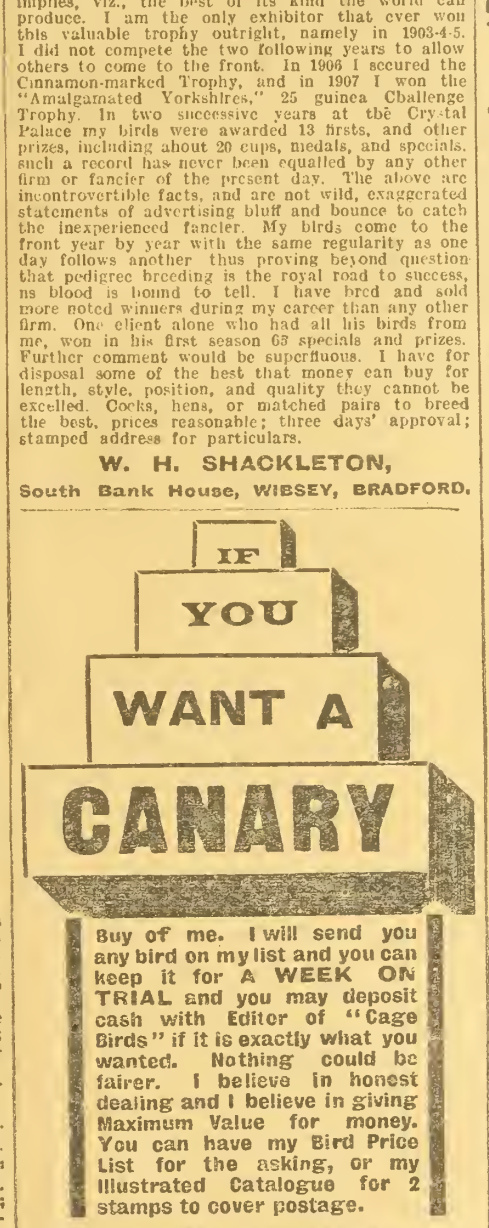
Shaw, 97, Essex rd., Islington, London, N Five doors from Cross-st. All cars stop at Cross-st.

THE NOTED PARAGON YORKSHIRES,

Having won the much-coveted £21 Yorkshire Challenge Cup, 1908, for the fourth time, is ample proof that the "Paragon Strain" is what the name implies, viz., the best of its kind the world can produce. I am the only exhibitor that ever won this valuable trophy outright, namely in 1903-4-5. I did not compete the two following years to allow others to come to the front. In 1906 I secured the Cinnamon-marked Trophy, and in 1907 I won the "Amalgamated Yorkshires," 25 guinea Challenge Trophy. In two successive years at the Crystal Palace my birds were awarded 13 firsts, and other prizes, including about 20 cups, medals, and specials, such a record has never been equalled by any other firm or fancier of the present day. The above are incontrovertible facts, and are not wild, exaggerated statements of advertising bluff and bounce to catch the inexperienced fancier. My birds come to the front year by year with the same regularity as one day follows another thus proving beyond question that pedigree breeding is the royal road to success, as blood is bound to tell. I have bred and sold more noted winners during my career than any other firm. One client alone who had all his birds from me, won in his first season 63 specials and prizes. Further comment would be superfluous. I have for disposal some of the best that money can buy for length, style, position, and quality they cannot be excelled. Cocks, hens, or matched pairs to breed the best, prices reasonable; three days' approval; stamped address for particulars.

W. H. SHACKLETON,

South Bank House, WIBSEY, BRADFORD.



Buy of me. I will send you any bird on my list and you can keep it for A WEEK ON TRIAL and you may deposit cash with Editor of "Cage Birds" if it is exactly what you wanted. Nothing could be fairer. I believe in honest dealing and I believe in giving Maximum Value for money. You can have my Bird Price List for the asking, or my Illustrated Catalogue for 2 stamps to cover postage.

GRAND VALUE IN

Typical Yorkshires, Plainhead Norwich, Crested and Crestbred Norwich, Pure Lancashires, Lizards, Hartz Mountain Rollers, Scotch Fancies, Goldfinch and Linnet Mules, Cage Moulted Finches and Linnets and Muling Hens.

Kindly state wants. Satisfaction guaranteed.

I have received thousands of flattering Testimonials, but I have not the time at my disposal to copy same for newspaper adverts., and prefer to give customers the benefit of the expense that a few columns of testimonials would cost to insert.

Large Descriptive Bird Price List Free on application.

E. TAYLOR,

Bird Specialist

1908 APRIL 1908

The few following, amongst many others, have been received during the first 4 days of this month, as will be seen by dates, thus proving that I still give unbounded satisfaction, not to the few, but to the

Hundreds of Thousands

—for satisfaction is the guarantee, not the exception.

Carry out what you profess to do in your advertisements.

2nd April.
Baltimore.—Kindly send one tin of Eggertine. No doubt you will be glad to hear that the pair of crests I had are going along splendidly. I am thoroughly satisfied with them, and also with your selection. In my dealings with you, I find you always carry out what you profess to do in your advertisements.—G. Southwood to W. Rudd.

Astonished at value.

1st April.
48, Princes Street, Devonport.—I received the Patent Perfection breeding cage alright, and I am astonished at the value. We can get nothing in the south to compare with it. It's like comparing a mansion to a mud hut.—F. Hopkins to W. Rudd.

4th April.
5, Bow Brook, Leyland.—The bird arrived here safe this morning. I am well pleased with it.—G. W. Hodgson to W. Rudd.

4th April.
Nant Ctg., Aerefair, Ruabon.—Bird arrived safely to-day. I am well pleased with it. Thanking you for prompt attention.—J. Andrews to W. Rudd.

4th April.
53, Cornwall Road, Bishopston, Bristol.—Thanks for birds, which I received safely this morning. I think them a very nice pair. I am very pleased with them.—R. Heard to W. Rudd.

4th April.
1, Osborne Villas, Acacia Grove, New Malden. — Received bird and parcel quite safe; very satisfactory.—C. M. Dace to W. Rudd.

4th April.
12, Dallin Road, Plumstead.—The birds arrived all safe, and I am highly satisfied with them.—R. Butcher to W. Rudd.

4th April.
Alexander Ville, Kingussie, N.B.—Birds arrived safely; quite satisfactory. — Wm. McCallum to W. Rudd.

4th April.
3, Glen Terrace, Ynyshil.—The bird arrived safely; many thanks for same.—W. Rudd to W. Rudd.

4th April.
91, New Gladstone Street, Abertillery.—Bird to hand safe, gives every satisfaction. The people who live around us have all fallen in love with him.—H. Bird to W. Rudd.

4th April.
Horse Close House, Melkridge.—I received birds safe, and I am very pleased to say how pleased I am with same. I shall get all my bird wants from you in future.—J. James to W. Rudd.

4th April.
5, Victoria Square, Redcar.—Received birds, all well. I am well pleased with them.—J. Preston to W. Rudd.

3rd April.
264, Fulham Road, London, S.W.—Crests arrived safe, and I am perfectly satisfied with them. Will soon give you another order.—A. Brugnoli to W. Rudd.

4th April.
767, Gt. Eastern Road, Parkhead, Glasgow.—Received Norwich songster in good condition. I am highly pleased with him. He commenced singing half and hour after he was unpacked. Wm. Maitland to W. Rudd.

2nd April.
105 Dumbarton Road, Partick.—I received birds this morning. Highly satisfied. I know where to get a good bird, and also good value for money. Will have pleasure in recommending you.—G. Edgar to W. Rudd.

2nd April.
18, Albert Street, South Shore, Blackpool.—Bird arrived safely, in grand condition. I am very well pleased with the way you have treated me.—H. Butterworth to W. Rudd.

3rd April.
35, Middle Street, Yeovil.—Birds to hand alright. I think they will match my birds nicely. Will send again shortly.—C. Childs to W. Rudd.

2nd April.

Never in the course of my experience, etc.

2nd April.
4, Llynne Street, Tondu, near Bridgend.—Allow me to thank you for the Norwich cock you sent. He arrived in the pink of condition. Never, in the course of my rather long experience, have I received such value. I am very pleased with him. I will do all I can to forward your interest in the South. F. Churches to W. Rudd.

4th April.
North Witham, Grantham.—I am writing to tell you the Norwich songster gives the utmost satisfaction.—Hy. Cox to W. Rudd.

1st April.
29, Queensboro' Terrace, London, W.—Miss Greeven received the Canary, with which she is very satisfied.

I cordially invite inspection. Call at 28, Park Lane (tram stops within minute's walk), and if I am not there I shall be, undoubtedly, with the birds, only another minute's walk. There you will find, in a suburban district of the City of Norwich, the immense collection in properly fitted and ventilated Birdrooms—not disused fowl and pigeon sheds in a country cottage back garden—and thousands in stock. This is not the "bluff" of a masquerader, but facts that you can easily verify.

Note this Week's Prices :—

COKERNUT HUSK NESTS.

Remember, my "Improved Secure" husks are made up, bored, and wired together differently to any others advertised. For 16 years they have been acknowledged unequalled for successfully rearing Budgerigars. I have sold more than all other advertisers combined. All the principal zoos and parks use "Secure" husks. This is what the Press thinks of them. CAGE BIRDS says they are "far superior to the old husks." Feathered World says "undoubtedly the new husks are far superior to the old." Exchange and Mart says "they are very superior to the old style, which often fall to pieces." They have distinct advantages, and are absolutely unbreakable, so don't be gulled. Comparison and competition always increase their popularity. They are entirely different to all others, and are sold only by me. One quality only, the best; 4/6 dozen, smaller quantities 6d. each. Instructive pamphlet, entitled "Budgerigar Breeding," free on application. Superior Cockatiel box nests, 1/6 each.

HARPER, Adelaide Villa, Dudley Rd., WOLVERHAMPTON.

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

USE OUR PICTURE POSTCARDS

THE SHOWS.

HALIFAX O.S.

The society held their first members' monthly show of the season at the Griffin Hotel on April 4th. It proved a great success, and appeared to be highly appreciated by the members, who turned up in good numbers. Mr. W. Speak (Halifax) officiated as judge, and gave every satisfaction. YELL. YORKS.: 1, 2, Walsh; 3, vhc, Cundall; hc, c, Ross and Robertshaw. NOVICE YELL. YORKS.: 1, Garside; 2, c, Haigh; 3, vhc, Saville and Hargreaves; hc, Burton.—J. F. THACKRAY and H. WHITAKER, Secs.

BRIGHTON F. AND F.A.

The monthly show of cage birds was held on April 2nd at the North-road Lecture Hall. Owing to breeding operations only two classes were provided for, and these were judged by Mr. Gravet. The arrangements were in the capable hands of the secretary, Mr. F. Perrin, who conducts these shows with great credit to himself.

A.V. CANARY: 1, Gibb, nice Yellow cinnamon tkd. Yorks. cock, very typical, silky feather, a topper; 2, 3, Dandridge, 2nd fine clear Buff hen, nice shape, well up to 1st; 3rd, clear Buff cock, stands well, will improve. A.S. BRIT.: 1, 2, Gibb, 1st cock Robin, in good condition, and steady; 2, cock Greenfinch, large and steady.

TUNBRIDGE WELLS & DIS. F.A.

A most successful members' show was held on April 1st in the Camden Hall, Tunbridge Wells, when over 170 exhibits were staged. The cage birds classes were a credit to the exhibitors, and much interest was shown in them. Mr. A. Hubble judged. CREST OR C.B.: 1, 3, Hayward; 2, Miss F. G. Knapp. YORK.: 1, 2, Knapp; 3, Cress. NOR.: 1, Barkaway; 2, Richard; r, c, Warner; vhc, hc, McVicar, Kirke. PAIRS: 1, Warner; 2, Whibley; 3, Richards; vhc, hc, c, Knapp, Richards, Batchelor. HYBRIDS: 1, 2, 3, r, vhc, c, Wraight; hc, Chalmers. BRIT. HARDBILL: 1, r, vhc, Wraight; 2, vhc, Waters; 3, Frost; 4, vhc, Richards. SOFTBILL: 1, 3, Warner; 2, Cross; r, Waters. FOR. BIRDS.: 1, 2, Miss Knapp.—H. G. WHIBLEY, Sec.

STOCKTON-ON-TEES C.B.S.

A most successful table show of breeding pairs was held at headquarters, Leeds Hotel, on April 2. Forty pairs of very fine birds were shown, the competition being very keen. In the absence of Mr. Hill, Mr. J. W. Lowes judged, and gave satisfaction.

NOR.: 1, 2, Freeman; 3, 4, Yeates; hc, e, Baines. YORKS.: 1, vhc, Cookman; 2, 3, Acheson; 4, Yeates. CREST OR C.B.: 1, Yeates; 2, Freeman. SELL.: 1, 3, Wake and Carr; 2, Yeates. HYBRIDS: 1, Wake and Carr; 2, 3, Freeman; 4, hc, Acheson; vhc, Cookman. CAN. MULE: 1, Wake and Carr; 2, Freeman; 3, Cookman; 4, Baines; vhc, Acheson. —J. W. LOWES, Sec.

PRESCOT C.B.S.

A members' show was held on March 28, at the Queen's Arms Hotel, Market-place, when a very creditable show of cage birds resulted, considering the time of the year. Mr. S. Taylor was the judge. There were about 50 entries, and the birds shown were of a very good class, many of them being fit for larger and open classes anywhere. During the afternoon and evening the show was visited by a large number of people, and was voted a great success. The staging was very good, and the judge's awards gave every satisfaction.

YORKS. YELL.: 1, 8, Wellings; 2, Appleton. BUFF: 1, Appleton; 2, Wellings; 3, Hall. NOR. YELL.: 1, Evans; 2, Bixter; 3, Bixter. BUFFS: 1, vhc, Bixter; 2, Bixter; 3, Appleton. HEN: 1, 2, vhc, Evans; 3, Mercer. PAIRS: 1, Bixter. BRIT. HARDBILL: 1, 2, 3, Wellings. SOFTBILLS: 1, 2, Wellings. SELL.: 1, Bixter; 2, Wellings; 3, Hall. FOR.: 1, Swift. NOVICE CLASS (never exhibited before): 1, Appleton.

SINGING CONTESTS.

SHEFFIELD.

A contest at the Don Inn, was held on April 5, when 17 birds competed. 1, Booker, 48; 2, Knight, 39; 3, 33. Judges, Messrs. Blackhadder and Robinson.—H. TIMMS, Sec.

BLACKBURN.

The Blackburn Linnet S.A. held week end contest on April 4, at headquarters, Old Red Lion, Snigbrook, Blackburn. Winners: 1, Catterall; 2, Dobson; 3, Rostron. Timekeeper, Mr. Rd. Topping. An All-England Linnet singing contest for quality will take place at the above club-house on April 18, entrance fee 1/- per bird.—(ADVT.)

LEEDS.

Usual weekly contest held at King's Head, Shannon-street, on April 4th, when 20 birds sang. 1st prize, S. Hardcastle; 2nd and 3rd, T. Stead. Judges, Messrs. Crane and Towers. Also on April 5th, when 30 birds faced the judges. Some extraordinarily good singing was heard. 1st prize, T. Johnson; 2nd, T. Stead; 3rd, S. Hardcastle; 4th, D. Clegg. Judges, Messrs. Cooper and Hinoson.—T. SUMMERS, Hon. Sec.

WEST HOUGHTON.

Linnet singing contest held at Cross Guns, Westhoughton, when 55 Linnets competed for six prizes, four for time singing and two for best quality. The winners were as follow: 1st, G. Boydell; 2nd, W. Wilcock; 3rd, T. Statham; 4th, R. Wisdom, for time singing; winners for best quality birds were: 1st, G. Janes, and 2nd, P. O'Neil. Judges for time singing, Messrs. Peter O'Neil and J. Battersby; time-keeper, Mr. Stranger; judge for quality, Mr. T. Jump (Wigan). Four prizes out of the six were won by Lowton Linnet Club, which is a new club. They want to sing any Linnet club in Lancashire for suppers and we hope clubs will take it up. Mr. J. Rostron presented them with their prizes and we spent a very enjoyable evening. A contest will be held at Ross Hotel, Astley, on April 4th; also one at Lowton Shepherd Inn.—J. W. JONES.

YORK.

Usual weekly contest, held at Crown Inn, North-street, on April 4, when 30 birds sang. Result: 1, Stotbard; 2, Firth; 3, Buckle; 4, Grainger; 5, Oxberry; 6, Massheder. Judge, Mr. W. Perry. Timekeeper, J. Mason.—J. W. SMITH, Sec.

Usual weekly contest, held at Bricklayer's Arms, Palmer-lane, Hungate, April 4, when 28 birds faced the judge. Result: 1, Limbert, Junr.; 2, Key; 3, S. Foster; 4, Massheder; 5, Whitehead; 6, Moley Warp. Judge, Mr. Jno. Paver. Timekeeper, Mr. J. Limbert.—WILLIAM EMPSON.

CROOK.

Linnet singing contest, at Mr. R. Winter's "Royal Oak Inn," Crook, Sat., April 18. Prizes, 12/6, 5/-, 3/-, 1/6, 1/-. Entrance fee 6d. per bird, half of each entrance fee to be returned in refreshments. Judge, George Reed, Brandon; Timekeeper, Wm. Rutherford.—(ADVT.)

NEWTOWN (Leeds.)

Members and friends of the Prince Albert Inn L.A., met March 28. Judges, Messrs. G. Towers and B. Jackson. Result: 1, J. Sellers; 2, W. Hinoson; 3, W. Turner. Contest, March 29. Judges, Messrs. H. Allen and B. Jackson. Timekeeper, E. Wood. Result: 1, A. Binner; 2, J. Chippendale; 3, W. Farrar. Contest, April 4. Judges, Messrs. W. Dean and B. Jackson. Result, 1, J. Sellers; 2, W. Hinoson; 3, W. Farrar. Contest, April 5. Judges, Messrs. H. Allen and B. Jackson. Timekeeper, Mr. E. Wood. Result: 1, J. Chippendale; 2, A. Binner; 3, J. Neat.—E. WOOD, Hon. Sec.

CLUB REPORTS.

READING AND DISTRICT C.B.S.

Monthly meeting was held at Palmer Hall on April 1st. There was a splendid attendance. Mr. Knapp (Sumner Green) was elected a member. A very able paper was read by the hon. treasurer, Mr. C. J. Howlett, on "The Breeding Season." A fine, interesting discussion took place, in which Messrs. North, Yates, Brooker, and others took part. Mr. Howlitt was accorded a very hearty vote of thanks for his instructive Paper.—G. A. CHARLES, Secretary.

WATH AND DIS. C.B.A.

The lecture on breeding of the Yorkshire Canary, given by Mr. W. Wadsworth, of Skelmanthorpe, on March 28th, was fairly well attended by the members. All who did attend were very pleased at the manner in which the lecturer handled the subject. Many interesting questions were put to the lecturer, who answered them to the satisfaction of all. A hearty vote of thanks to the lecturer was carried unanimously. It was hoped it would not be the last time he (Mr. Wadsworth) would be amongst us. Our President, Mr. W. Tose, presided.—H. A. WATSON, Secretary.

WIBSEY AND DIS. C.B.S.

The above society held a very interesting and instructive debate on March 21st, at headquarters, "The Horse and Groom Inn." Mr. J. Hartley (Lidget Green), the well-known cinnamon marked breeder, opened the debate by a short explanation of the standing of the cinnamon to-day as compared with 10 years ago. His remarks were listened to very attentively by all, and many and various were the arguments advanced in support of the little beauty. Mr. Hartley gave a very hearty invitation to all fanciers' to join the cinnamon marked club, and compete for the splendid spls which are offered every year for competition among its members. A very interesting and also instructive evening was brought to a close by Mr. Johnson proposing and Mr. H. Taylor seconding a very hearty vote of thanks to Mr. Hartley for his kindness in opening the debate.—E. W. JOHNSON.

OLDHAM AND DIS. C.B.S.

A very successful washing competition was held on March 24th at headquarters, the Textiles Dining Hall, Shaw-road. There was a very good muster of members and friends, who had come expressly to watch the proceedings, the competition having been brought forward for the benefit of those who had not had the pleasure of seeing a bird washed before. From the remarks made by the majority of those present, they seemed to be highly satisfied with the evening's entertainment. Mr. T. Young (Oldham) adjudicated and gave his final awards as follows:—1st, Mr. A. Ackroyd; 2, Mr. G. Fitton. After the competition had finished, a few of the older hands demonstrated their ways of washing birds, which seemed to be very instructive. Each one had his own particular way of washing, the gentlemen taking part being Messrs. J. Sharples, T. Young, and J. Hampshire.—F. STEEPLE, Sec.

KELTY AND BLAIRADAM C.B.S.

The monthly meeting of Kelty and Blairadam O.S. was held in "Gothenburgh." Mr. James Wilkie presiding over a large attendance of fanciers. The following discussion was properly thrashed out by the chairman and Mr. Stenhouse—viz., Has a member to pay the same as the general public after working for the show's interest all year? The chairman, in his remarks, said that if we wanted to show an example we must pay our yearly subscription. The other general business being completed in a business-like way, the meeting closed with a hearty vote of thanks to the chairman for his help.—J. FORD, Sec.

SCOTTISH NORWICH PLAINHEAD CANARY CLUB

The office bearers for year 1908-9 are as follow: President, Mr. James Winter (Edinburgh); vice-presidents (5), Messrs. A. Chalmers (Kirkintilloch); J. Hector (Aberdeen), W. Watson (Kilmarnock), A. G. Cameron (Kelso), and J. Ferguson (Glasgow); committee (13), Messrs. J. McLay (Kirkintilloch), J. Young (Rutherglen), G. Scrife (Fauldhouse), J. Smeaton (Prestonpans), W. B. Mackie (Aberdeen), Jas. F. Dewar (Edinburgh), W. Jaffrey (Brechin), Alex. McFarlane (Glasgow), W. Aitchison (Edinburgh), A. C. Dandie (Edinburgh), W. G. Muir (Kilmarnock), J. Adams (Dundee), and A. Sloan (Glasgow); judges (6), Messrs. J. McLay (Kirkintilloch), A. G. Cameron (Kelso), J. Ferguson (Glasgow), Wm. Watson (Kilmarnock), J. Adams (Dundee), and W. B. Mackie (Aberdeen); auditors (2), Messrs. J. Young (Rutherglen) and A. R. Landlands (Montrose); scrutineers (2), Messrs. A. Roberts (Thornliebank), and C. Campbell (Glasgow); secretary and treasurer, J. Brown, 107, Pollokshill-road, Glasgow. The following are the voting returns for the secretaryship as received from scrutineers, 54 papers being returned as follow: J. Brown (Glasgow), 32; S. Puglaes (Pollokshaws), 10; and F. Bowman (Glasgow), 8; spoiled, 4. A. Roberts and C. Campbell, scrutineers.—JAS. WINTER, President and Sec., pro tem.

BERWICK-ON-TWEED C.B.S.

A meeting was held on March 21st. It was arranged to hold the next annual show on November 19th in the Corn Exchange, Berwick-on-Tweed. The following gentlemen were appointed to act as judges: Messrs. R. S. Bewick (Newcastle), for Norwich, British and Foreign; W. C. Duncan (Coldstream), for Borders and Mules; John Elder, for Scotch Fancy and Variety. Other societies please note show date and avoid clashing.—JOHN SMART, Hon. Sec.

TONG AND DIS. C.B.S.

About 40 members and friends attended at the Holme Lane Hotel on March 24th to hear a Paper read by Mr. Fred. Allen of Cleckheaton, on the "Yorkshire Canary." Mr. Allen dealt with his subject in a very pleasing manner, dealing especially with the pairing and breeding of the birds. A great many questions were asked and answered by Mr. Allen. Altogether we had a very pleasant and instructive evening. We initiated seven new members; there is still room for more.—J. SMITH, Secretary.

HEYWOOD AND DIS. C.B.S.

At the monthly meeting, held on March 24th, a good attendance of members assembled to hear a lecture on the "Management of Canaries," by the Rev. R. P. Hudson, of Bury. Mr. James Perry, President, took the chair. Mr. Hudson was listened to with great interest by the members. At the close a number of questions were asked by the members, and were ably answered by Mr. Hudson. A hearty vote of thanks was accorded to the lecturer and in reply, Mr. Hudson thanked the members for the good hearing and wished the Society every success. At the meeting held afterwards, it was decided to hold First Feather Show on June 27th.

WALTHAMSTOW F.A.

The adjourned general meeting was held on March 24th, Mr. J. S. Clarke presiding. The balance sheet was discussed, the secretary stating that owing to the short time allowed for the preparation of same, he was unable to correct it, so that the copies had to be sent out just as he had received them. Although the balances were all correct, there were one or two errors. The original copy, however, on being submitted to the meeting, was found to be correct and was accepted. The election of officers resulted the same as last year, with the exception of Mr. J. S. Clarke (chairman), his place being filled by Mr. C. Burton. Mr. E. J. Voss was elected vice-chairman. Mr. W. Hammersley was added to the committee, together with Messrs. E. Buck and J. Banks. The secretary also resigned, his office being filled by Mr. A. B. Forse.—C. W. MEAD (late Secretary).

PETERBORO' C.B.A.

The annual general meeting was held at Bedford Hotel on March 19th, Mr. Smith in the chair. The secretary and treasurer's report was read, showing a very successful year, with a cash balance of over £12 in hand, against £2 5s. at annual meeting last year. All the officers were re-elected, with the addition of Mr. Fowler on the committee. The society are extending the open show, making 46 classes, and are holding it on two days, October 7th and 8th, with Messrs. J. Robson, J. Wilcock, and W. Lowne as judges. As these dates fall on the annual October Fair, we hope fanciers will avail themselves of the cheap excursions which are run from all parts, in many cases at less than half single fare for the return journey, and run from Bradford up North and the City from the South. These will be advertised later. The special prizes won at the members' shows were presented, and included two copper kettles presented by Mr. Watts. Several new members were admitted to the society, and the chairman, in moving a vote of thanks to Mr. Lilley, the secretary and treasurer, congratulated the society on its financial position, and on the success of the past year. It was no doubt due, he said, to the society that it should prosper while it was carried on in the same manner. The usual vote of thanks concluded the meeting.—S. L. COCKS.

DULWICH O.S.

A well attended meeting took place at the Herne Tavern, Peckham Rye, on March 18th, to hear Mr. G. F. Woolhouse, on the breeding and management of Canaries. The chair was taken by Mr. W. Wall. The lecturer cautioned his hearers not to be in too great a hurry to pair their birds, as early marriage ofttimes resulted in failure. He recommended Canary seed with a pinch of rape as the staple food with egg food every other day, till the eggs arrived; then plain Canary only while the hen was sitting. When the young were due he used the yolk of egg only for the first three days and from that time onwards he added biscuit, together with a little caster sugar and ground rice. He also gave hemp uncrushed to the old birds and crushed to the young when leaving their parents, gradually reducing it till he got them on to Canary seed only. Green food he only used during the warm weather in the shape of a little watercress or young lettuce. If his birds ever went thick he placed them on bread and milk with a few drops of tincture of rhubarb in their water. He warned breeders to take every precaution against mice, as these pests were the cause of many birds going wrong. He also pointed out that if strangers were allowed in a room where birds seldom saw anyone but their owner they would have been deserting their nests. Many questions were asked, and amongst Mr. Woolhouse's replies, he stated he preferred double to single breeding cages; Niger seed would prevent egg-binding; one cock to one hen except in exceptional cases; earthenware nest pans before wooden ones; Osborne biscuits; isinglass made into jelly, a little added to egg food as conditioner; only small quantities of any green food at all; and only healthy and the best procurable stock to breed with.—ROGERS & MAZZONI, Hon. Secs.

BRADFORD (East) O.S.

At the meeting held on March 24th at headquarters, Mr. C. Cowgill opened an interesting debate on the "Yorkshire Canary," giving in detail an account of all the principal factors, which have had to be mastered, before the Yorkshire Canary could be staged in that perfection in which it is shown at the present time. The various points he dwelt on were taken up by the good assembly of members afterwards, and a very interesting discussion followed. A vote of thanks was proposed to Mr. Cowgill. The members then appointed three delegates to the Yorkshire Union in the persons of Messrs. Cruise, Hill, and Peacock. A suggestion was made that the delegates should report to the society all the important business transacted by the Union in order that members may become interested in the Union's affairs. Another gold medal was promised for the members to compete for during the coming year, and we have now a very valuable list of prizes, including five medals, and many other equally good specials. Members please note that subscriptions are to be paid by the 1st of May in order that they may be eligible to compete for specials. The first ramble will take place on Easter Monday to Grassington, and all who intend to go with us will please give in their names at next meeting in order that necessary arrangements may be made. A debate on the length of the Yorkshire takes place at next meeting.—H. HILL, Sec.

GREEN CANARY ASSOCIATION.

Annual meeting held in the Oldham Hall, Renshaw Street, Liverpool, on March 26th, Mr. Metcalfe in the chair. The balance sheet was passed as printed. The secretary was granted the sum of £3 and the assistant secretary 30/-. Notices of motion: That we send a representative to each show to see that rules, etc., be carried out (no seconder). 2. That we do not give patronage to shows giving less than four money prizes (left over till July meeting). 3. That we have a Standard Yorkshire show cage (as last year, adding seed boxes). 4. That the G.C.A. open a banking account (to be opened with the Liverpool Savings Bank in treasurer's name).—5. That we do not elect our officers by ballot but at the general meeting (lost). 6. That all moneys received on behalf of the Society shall be handed to the treasurer in full; the treasurer to pay all accounts, and supply the secretary with monies for incidental expenses; all orders for printing to be sanctioned by the Committee before being given out (carried). 7. That the annual subscription be raised to 4/- (lost). 8. That the annual subscription be raised to 5/-, and the members be not asked to give specials for the club shows (lost). 9. That any two members showing birds from one house shall be entered in one class, that is, if one of the members is a champion exhibitor all entries shall be made in that class (lost). 10. That we give patronage to Dulwich and Peckham and a few other southern shows (left over till July meeting). 11. That the balance sheet be in the hands of members a week before the day of annual meeting (carried). Patronage, classification, selfs and fouls, alternate with cocks and hens. All applications for patronage must be made to the secretary by July 20th, and all societies applying for patronage must undertake to give 4 Yorkshire Green classes and 4 Norwich Green Classes. Mr. Isaacs gave notice to move at the July meeting: "That no member vote on the allotment of patronage who will not guarantee to show at at least three shows. Cash specials: It was decided to have a draw as last year, to raise cash specials. The election of officers resulted as follows:—Chairman, Mr. Metcalfe, 46; vice-chairman, Mr. Handley, 19; secretary, Mr. Hadwin, 55; asst. secretary, Mr. Wilson, 53; treasurer, Mr. Isaacs, 52; auditors, Messrs. Lawson, 47; committee, Messrs. Deacon, 44; Hales, 33; Rowlands, 33; Davies; 32; W. Thompson, 26; Ryno, 24; and Doughty, 21. (Signed) Ed. Lawson, and P. Moss, auditors. — S. HADWIN, secretary.

HARROGATE C.B.S.

The annual meeting and prize distribution took place at the King's Cafe, on March 23rd. About 20 members partook of an excellent tea. The proceedings were under the presidency of Mr. Horace Milling, J.P., who has proved to be a most popular official. The secretary, in presenting his report for the past year, said they would be glad to hear of the steady progress made since 1905, when they had a balance in hand of £2 8s. 7d. Last year they improved so much that they had £6 14s. 7d. to their credit. This year they had done even better still, in spite of more shows being held, and competition being so keen. The balance they had in hand was £11 16s. 3d. He wished to thank every member of the society for the willing help and assistance rendered. Mr. Milling then presented the prizes, which consisted of cups and medals, to those who had made most points throughout winter season. In the Yorks., Mr. W. E. Fergusson came first with 118 points, Mr. L. Hewson second, 108, Mr. T. Head third, 107, Mr. Duncan, junr., fourth, 62, Mr. J. W. Barratt fifth, 61, Mr. G. H. Barnwell sixth, 57 Mr. J. H. Walker, seventh, 49, Mr. T. Bennison, eighth, 39. In the Norwich, Mr. W. Ascough first, 70, and Mr. H. Gregg second, 39 For Mule or Hybrid, Mr. J. Lamb first, 56 points, and Mr. D. Duncan, junr., second, with 29 points. In the British section, Mr. D. Duncan carried off first with 77 points, and Mr. J. Bousfield second, 39 points. The election of officers followed. Mr. Milling was re-appointed president; the vice-presidents were re-appointed en bloc, with power to add; Mr. C. Craggs was re-appointed chairman, and Mr. Barnwell hon. secretary and treasurer. Mr. Milling observed that they could not have a more energetic officer than Mr. Barnwell. He was not only hearty in his work, but he possessed what was a very important thing for such a post—tact and judgment. The managing committee were re-elected as follows: Messrs. Craggs, Carline, Brown, Barrett, Bennison, Duncan, junr., Head, Walker, Fergusson, Cragg, Ireland and Barnwell. It was decided to hold two feather shows, one on June 20th and the other on July 18th. The open show was fixed for December 5th, or the nearest convenient date, subject to this not clashing with other shows in the immediate vicinity. A vote of thanks was accorded the chairman, and during the evening songs were rendered by Messrs. E. Clarke, J. H. Walker, and D. Duncan, junr., Mr. H. Burrill acting as accompanist. A bird which called for much admiration was on view during the evening. This won first prize at the Crystal Palace, together with a silver goblet for the best fed Canary. It was the property of Mr. J. H. Walker (Harrogate). G. H. BARNWELL.

HARMLESS TO OTHER ANIMALS.

UNDER THE WHITE ROSE.

HUDDERSFIELD O.S. have reconsidered their recent decision as to withdrawing their support from the Yorkshire Union, and fanciers will be pleased to hear that at their last meeting it was unanimously decided to withdraw their resignation. The strength of the Union is now twenty-five societies, and the number of members slightly over 1,100.

TWO other Societies are considering the advisability of joining the Union, viz., Wakefield, and the new Bradford Society at Tong, and I venture to think it will be to their benefit to do so. More new members are bound to come, particularly novices who wish to show in novice classes, and have a run for the gold medals provided by the Union. Should these societies decide to join they will bring the members of the Y.U. up to close on 1,200.

THE Norwich Plainhead Club is now definitely formed, and is to bear the title of "The Open Norwich Plainhead Club," the original idea of its being confined to Yorkshire having evaporated in consequence of applications for membership from fanciers outside Yorkshire. From what I hear, the membership will not be very long in reaching the century. Mr. O. Mitchell, who acted as secretary pro. tem., has been elected hon. secretary, and during the next week or two will be sending out names and addresses of members for the nomination of the committee, 20 being the number required. Full particulars as to rules, etc., will be found in the Secretary's report.

THE general meeting of the C.M.Y.C.C. takes place to-day (Saturday, April 11th), at 5 p.m., at headquarters, Market Tavern. Some important business is to be discussed, which includes the election of officers and committee for season 1908-9. All intending members should make a point of attending, and so join the society at the beginning of the session.

WIBSEY O.S. on Saturday last had Mr. Clarkson, of Halifax, down for a paper on breeding and rearing, and as usual had a fair turn up. Mr. C. is a good man at lecturing, his style being witty and interesting, and he gives fanciers the full benefit of his long experience in the Fancy.

BARNSLEY Society seem to be having rather a sorry time of it at present, and if nothing is done a collapse seems inevitable. The members have dwindled down to a very small number. What is required is someone to visit the breeders and persuade them to take an interest in the society and its working. That the few who remain, and have the interest of the Fancy at heart, will succeed in pulling the society together again, is my sincerest wish. Time was when they could hold a good show, and were fairly strong in members.

"STRAIGHT 'UN."

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given each week for the best three anecdotes about birds written on postcards. Competitors must be children under sixteen years of age, and must state from where stories are taken.

Two stars indicate the Winning Contribution; one star the runners up.

*Bullie's Kisses.

My Bullfinch is very fond of sunflower seeds, and will take them from my mouth. He always kisses me when I come home from school, and when I go to bed at night.—Sent by Katie Newman (age 10), Staines Road, Sunbury.

A Well Mannered Macaw.

While at Bello Vue Gardens one Sunday morning, with my parents, we gave a Macaw a nut with a hard shell. The bird tried to crack it, but could not. Finding out that it was too hard, it said "Crack it please". When we had cracked it, it took the nut and ate it. Sent by C Donald, (aged 13), 120 Oxford Road, C. on M., Manchester.

*The Birds in Spring.

The hedgerows are budding at last;
And the frost and the snow are now past.
The Nightingales, Blackcaps, and Tits
Are making their nests with small bits.
The Thrush is also on her nest,
While Mr. Thrush, he sings his best.
Larks and Bullies, Goldies and Twites—
All are seeking quiet nesting sites.
Our cage birds, too, are nesting daily,
The Canaries singing very gaily.

—B. Vail (age 13 years), 31, Collier Road, Cambridge.

*A Cat's Care for a Canary.

A lady had a Canary which was so tame that it would hop on her finger, and pick crumbs out of her hand. She had a cat, too, in the house, which was taught to be kind to the bird. One day the lady had the bird on her shoulder, and it flew down on the floor to pick up a crumb. The cat saw it, and seized the bird in her mouth and jumped on the table, because another cat was at the door. The strange cat was driven out, and the lady's cat let the bird go, and it flew to its mistress quite unhurt.—Millie Berryman (age 14), 11, Highland Street, Eastney, Portsmouth.

FANCIERS' FESTIVITIES.

Sheffield C.B.S.

A highly successful whist drive was held in the Foresters' Hall on March 16th, when 35 tables were occupied by an influential company and a company that would augur well for the success of any society. Valuable prizes were given, nine in number. The recipients of these were highly delighted with their success. Great credit is due to Messrs. T. Bishop, A. Bradshaw, R. Colton, and E. Memmott for this pleasant and enjoyable evening, which it is hoped will prove the forerunner of more socials in connection with this flourishing society.—LINDSAY and BINGHAM, secretaries.

Attercliffe and District C.B.S.

A smoking concert was held in the club room at the Horse and Jockey Hotel, Attercliffe, on March 26th, when there was a very fair number present, including a number of ladies. The President, Mr. Havenhand, was in the chair and in his speech mentioned the objects of the society. Although it was only young, it was going on very successfully, having a good number of members, and he was in hopes of making a few more members this season. The society had already held some very successful shows. The rest of the evening was spent in harmony, and was very much enjoyed by all present. The following gentlemen contributed to the evening's enjoyment, Messrs. Rawsey, Gregory, Burns, and Hancock, and their services were much appreciated. The gathering was one of the most enjoyable in the history of the society.—W. RICHINSON, Secretary.

Islington F.A.

On March 19 the members and friends of the Islington F.A. dined together at the "Rising Sun," Brooksby Street, N. Mr. W. J. Hoare presided, and there was a large gathering of members. An excellent repast having been partaken of, the Chairman proposed the usual loyal toasts, which were heartily received and duly honoured. "Success to the Islington F.A." was proposed by Mr. A. Adams, one of the oldest members, who spoke of the names of Fulton, Hammock, Ross, and others as having been connected with the Association. Through all obstacles and all vicissitudes they had come out with flying colours. Mr. E. F. Clarke (Secretary) responded in a speech full of satisfaction at the past, and of hope for the future. He gave the history of the Association from the year 1899, and said that in 1901 the members were asked to forego their prize money in order to keep clear of debt. Mr. Edwards, as Secretary, pulled the Association out of the ditch, and gave them a balance on the right side. He (Mr. Clarke) was now in his sixth year of office, and the Association was on the up-grade. They had peace, which was the mainstay of the Association, and they hoped for prosperity in the future. "The Fancy Press" was proposed by Mr. Chapman, in a few well chosen words, and responded to by Mr. Geo. Gardner. "The Chairman and Officers," proposed by Mr. Gardner, and responded to by Mr. Bone, and "The Visitors," by the Chairman, constituted the toast list. Some capital vocal and instrumental music was contributed by Messrs. H. W. Hoare, C. J. Potter, Fred Hodsdon, E. A Clarke, E. F Clarke, Harry Francis, H. E. Fisher, and others, and a highly enjoyable evening was spent.

Successful Smoker in Glasgow.

The above title was fully deserved by the Smoker which took place in the Bank Restaurant, Queen Street, Glasgow, on Tuesday, the 17th March, under the auspices of the Glasgow and West of Scotland N.M.B. and F.B.C., and it must be very encouraging to this club to be able to get such a grand turn-out of members and friends and such good artistes to amuse them. In fact, so pleased are the promoters, Messrs. Gibbs and Graham, with the fruits of their labour, that they intend to make the smoker an annual affair. In the absence of Mr. Eastman (the president), Mr. M. Craig was voted to the chair, and he was assuredly the "man for the job," with a joke here and a smile there, he kept the company in high, good humour. In opening Mr. Craig made reference to the regrettable absence of Mr. Eastman, and asked Mr. R A. Brown, the secretary, to speak on behalf of the club. Mr. Brown made an interesting speech, dealing with many club matters, among which being the differences existing between the various clubs and societies in and about Glasgow. He hoped that in the near future there would be more unity and, therefore, greater strength. The next item on the programme was a song, "The Star of Rabbie Burns," by Mr. A. Muir (the late secretary of City of Glasgow O.S.), which was well received. "Trafalgar Square" was then sung in good style by Mr. A. K. Chalmers, and Mr. R. A. Brown gave a reading. Mr. J. Erskine sung "MacGregor's Gathering" in masterly style, which has brought him fame as a tenor, and later on "The Death of Nelson." Various other songs were sung by Mr. Kelly, Mr. Brown gave a reading. Mr. J. Erskine sang less than five songs (including "Adam and Eve"), and without a doubt was the star of the evening. Mr. McCallum was asked to toast the kindred societies, and did so in his usual excellent manner. Mr. Graham (of Partick Club) replied. Mr. J. Brown toasted the trade and the Press, and Mr. And. Wilson replied, dealing with the advance of trade in the last few years, and the usefulness of the Fancy and Press in encouraging the keeping of cage birds as a hobby. He also said that what we wanted was more of the weaker sex in the Fancy (which brought a remark from a member to the effect that "Then our troubles will begin"). Mr. Peter Easton proposed the toast of the artistes (which brought down the hall), and said he had been at many a smoker, but never one half so enjoyable as this. All branches of the Fancy were well represented, among those present being Messrs. McLay, Whitelaw, McPhail, J. Kidd, Wm. Wilson T. Erskine, R. Stuart, Tannoch, J. Brown (the late secretary), Thaw, A. Paterson, Hendry, Martin, George, Crawford, and many others. A very enjoyable evening was spent. The health of Mr. Craig was drunk, and the cheers and shouts of "He's a jolly good fellow" made the building shake to its foundations.

Bradford West C.B.S.

The annual tea and social was held at the Red Lion Hotel, Girlington, on March 21st, when upwards of 70 members (and wives) sat down to an excellent tea. The President, Mr. W. A. Cowgill, occupied the chair, and mentioned the objects of the society. He stated that, although the membership had dropped to 76, he did not think they need be worried by that, as so many new societies had now sprung into existence around Bradford that fanciers now joined those nearest their homes. They also had lost a large amount of money both at the First Feather and the old shows. There were over 40 classes at the latter, this being the largest classification in the district. He trusted the coming year would be one of the best in the history of the society, and that the association would be still looked upon as one of the best societies, not only in the district, but throughout the country. The prizes were then presented. Open: 1st, Murgatroyd and Sons, 64 points; 2nd, Cowgill, 60; W. Crabtree, 57; Inman, 41. Novice: 1st, Pratt, 52 points; Helliwell, 42; Bennett, 41; Dobson, 34. After the distribution of prizes a very enjoyable programme was gone through, the following contributing: Mrs. Wallbank, Messrs. Duffy (Irish song), Wilson, Broadbent (bass), Armitage (tenor), and H. Townend (baritone). The proceedings went merrily along till close on 11 o'clock, when the President tendered to Mr. Pollitt (a member of Bradford City, who is leaving for Canada), the best wishes of the B.W.C.B.A. in his new home across the sea. A vote of thanks to the artistes the host and hostess, and the chairman, closed the best gathering ever held by the society.—H. CLEGG, hon. sec.

Our Frontispiece.

We are pleased, writes Messrs. Barry Bros. (Horfield, Bristol), you have honoured us by putting our Bramblefinch on the front page of CAGE BIRDS, and for the benefit of your readers we may say that we feed it on a mixture of Canary, hemp, teazle, soaked rape, and sunflower seeds, and the latter he seems very partial to. The bath plays an important part in keeping these birds in condition. The Bramblefinch is a bird that improves in his markings with age. It is advisable for fanciers fortunate enough to have a large one, with a well-spangled back, to retain it for a moult or two. It will then very often improve in head lacing, which is a most desirable point in an Exhibition specimen. Our Bramble is by no means yet in its prime, but has won at the following shows:—1st, Nottingham; 1st, Darlington; 1st, Hull; v.h.c., Palace, 1908, etc. We wish CAGE BIRDS every success.

Eiffel Tower BUN FLOUR.

A 1d packet makes 15 delicious light buns with certain success, Almond, Lemon, or Vanilla.

TWITTERINGS.

CAGE BIRDS ANNUAL is grand, and a great help to all fanciers.—J. JONES (Oswestry).

I have had over 70 orders for my moss, as advertised in CAGE BIRDS, writes Mr. Jim Bona (Otley).

I have sold all my birds through your valuable paper, CAGE BIRDS, writes Mr. A. West (Rochdale).

My Roller hens are all sold out, through my advertisement in CAGE BIRDS, writes Mr. G. Austin (Bury).

We hear that Mr. A. Wellings will judge at Southport show on June 20th, and at Penketh show on July 25th.

I had answers from all parts of the country to my last advertisement in CAGE BIRDS, writes Mr. R. Kinder (Pleasby).

The quarterly statement of accounts of the City and Suburban A.C.B. reaches us, and shows a cash balance of £24 15s. 1d.

Mr. A. Wellings will judge our First Feather show on June 20th, writes Mr. T. Johnson, secretary of the Southport C.B.S.

We have decided to hold our annual show on October 31 and November 2, writes Mr. Thos. Smith, secretary, Ilkeston and District O.S.

The date of our open show, writes Mr. Geo. Hy. Barnwell, secretary of the Harrogate C.B.S., is December 5th, the judge being Mr. J. C. Barnes.

I had so many replies to my advertisement in CAGE BIRDS, writes Mr. E. W. Loader (Abingdon) that I really could not afford to answer them all.

We have received an excellent photograph—one of the best of its kind—of the officials and judge of the Falmouth Cage Bird Society's annual show.

CAGE BIRDS ANNUAL is, I think, writes Mr. W. Hawkins (Ash grove, Queenstown), very up-to-date and even exceeded my expectation. No fancier should be without it.

We have fixed our annual open show for November 20th and 21st. to be held under C.B.U. rules, writes Mr. W. Ridge, secretary, Wigan and Dis. C.B.S. The judge will be Mr. H. Tams (Longton).

CAGE BIRDS ANNUAL duly came to hand, and contains a wonderful amount of useful knowledge for the modest sum of 6d. charged for it.—Robt. Whitton (secretary of the Broughty Ferry C.B.S.).

CAGE BIRDS is a very good paper to advertise in. I had replies from as far away as Dublin, Isle of Wight, and all over England. They were too numerous for me to reply to all.—T. E. Richards (Morley).

The Yorkshire C.C. of Ireland has fixed Thursday and Friday, 26th and 27th November next as the dates on which to hold the annual show in Dublin, writes Mr. W. C. Sholedice, tho hon. secretary.

The judges for our annual show on October 8th and 9th, writes Mr. W. Quantrell, secretary of the Watford and Dis. C.B.S., are Messrs. C. A. House (Canaries) and J. Frostick (British and Foreign birds).

I wish to thank you for so kindly sending on to me the donation of 6s. from Mr. S. Stubbings, of Australia. I hope shortly to publish the full total to date received on behalf of Mr. Spiers.—J. H. Neal (London).

I do not think we could possibly do without your valuable paper, CAGE BIRDS, writes Mr. D. Jeremy, secretary of the Morriston and District C.B.S. It is full of information, useful alike to both old and young fanciers.

At a meeting held on March 28, writes Mr. D. Jeremy, secretary of the Morriston and District C.B.S., the names of Messrs. P. Jenkins, A. Hutchings, F. Heal, and J. Hawkins (all of Swansea) were added to our membership roll.

Speaking of the wonders of migration, a writer in a contemporary states that a Yorkshire observer not long since stood within a few yards of a bush which housed three or four hundred Gold-crested Wrens, too exhausted to be shy.

The goods I advertised in CAGE BIRDS, writes Mr. R. E. Macpherson (Benges), are now all sold. I could have sold them two or three times over already, and the replies enclosing P.O.'s which I have had to return were very numerous.

Owing to the Preston show date clashing with ours, writes Mr. Jas. Emmett, secretary of the Warrington and Dis. C.B.S., we have changed our date to November 27th and 28th. Messrs. Battye and Wellings will still remain judges for the occasion.

The London and County O.A., writes Mr. R. J. Pretty, the hon. secretary and treasurer, will in future hold its meetings and shows at "The Goat and Compasses" Euston Road, N.W. (the original headquarters), on the third Tuesday in each month.

My society have engaged as judges for our show on November 11th and 12th, Mr. Hopper (Keswick) for Border Fancies, Mr. Vardy for Norwich, etc., and Mr. Ladlow for British birds, writes Mr. W. H. Wright, secretary, Carlisle and Dis. C.B.S.

I have had letters from all parts, writes Mr. C. E. Brown (Kingsweston, Shirehampton), asking me questions respecting my lecture, which you recently published. I beg to say that I am only too pleased to answer any letter if stamp is enclosed.

We hear from the secretary, Mr. F. Gorrish, that at the exhibition to be held on Eastcaston and Dis. H.S., there will be one local and three open classes for cage birds, which may be shown singly or in pairs.

We intend holding a summer show of cage birds, etc., open to Kent, Surrey, and Sussex, in conjunction with the East Kent Agricultural Show at Deal, on July 15th and 16th, write Messrs. Avis and Thompson, hon. secretaries, Deal, Walmer, and Dis. F.A.

The latest additions to the membership roll of the Scotch Fancy Canary National Derby O.A., writes Mr. Thos. Smith, the hon. secretary and treasurer, are Messrs. P. M'Adam (Jamestown), J. Kennedy, Senr., J. Kennedy, Junr., and J. Donnelly (Paisley), and T. Smith (Slamannan).

The Hucknall Torkard C.B.S. will hold their first feather show on June 6, and Mr. J. Adnitt (Normanton) will judge, writes Mr. H. Marshall, secretary. All future correspondence relating to the society should be addressed to me at 41, Truman-street, Hucknall Torkard, Notts.

Members in arrears of subscriptions must be clear on books before April 25th, 1908, or they will not be returned to the Union as members of this society, writes Mr. F. Rhodes, secretary, City of Bradford O.S. Also members who have changed their addresses will please notify me of same before April 28th.

We cannot speak too highly of your valuable paper, CAGE BIRDS, which has proved most beneficial to us. The demand for our "Mincer" has been much greater than we could supply, and nearly every order mentioned CAGE BIRDS. Again thanking you. We wish your paper every success.—Cox and Son (Birmingham).

Mr. Garthwaite, proprietor of the well-known "Lifebelt" food for feeding young birds from the nest, has added a supplement to the pamphlet which describes this food and the ingenious method of using it. A copy will be sent post free to all readers sending their address on a post card to 49, Hare Street, Grimsby.

Kindly thank all applicants for my Bully hens advertised in CAGE BIRDS, writes Mr. D. Terrington (King's Lynn). They were so numerous I could not possibly answer all—only those who sent stamp for reply. I had 49 replies from England, Scotland, and Wales; this shows what a valuable paper CAGE BIRDS really is.

We have received from the secretary, Mr. J. C. Birch, a copy of the Queen's Park and Dis. C.B.A. rule-book. It is attractively got up, and contains an excellent programme of events, including a young bird show on June 27th, and table shows (Canaries) on September 3rd and November 5th and (British) September 17th and December 3rd.

OBITUARY.

MR. W. J. SUTCLIFFE (Todmorden.)

I regret to have to record the death of our late secretary, Mr. J. W. Sutcliffe, who died, after a short illness, at his residence, West Byran, Todmorden, writes Mr. Geo. Pickering, secretary of the Todmorden and Dis. C.B.A. At our last meeting many were the expressions of sorrow at the loss that had been sustained by the society. Deceased was 42 years of age and a widower.

We have arranged with the following gentlemen to judge at our annual show on October 10th, writes Mr. Robt. Whitton, secretary of the Broughty Ferry C.B.S.:—Scotch Fancies, Messrs. T. Allison (Aberdeen); and H. B. Melrose (Galashields); Crests and Plainheads, Mr. A. Chalmers (Kirkintilloch); Border Fancies, Mr J. Patterson (Chirnside); British and Foreign Birds, P. McQuaston (Ayr).

The Edinburgh Ornithological (Open) Society has been fortunate in securing the services of the following gentlemen to judge the Scotch Fancy section at its show on December 11th and 12th, writes Mr. William Thornton, Jnr., hon. secretary and treasurer: Messrs. Arnot (Sauchie), Carson (Easthouses), Stewart (Glasgow), and Wright (Greenock). Mr. Kean (Edinburgh) has consented to judge the Belgian classes.

The judges for our next show on November 28th and 30th, writes Mr. R. Roll, secretary of the Norwich Alliance All England C.B.A., are Messrs. J. Dobson, W. E. Greeves, J. F. Hills, J. Stark, and A. Woollard. Our show will be held under C.B.U. rules, and will be open to all England, Canaries (champions, amateurs, and novice), and British and Foreign. Our definition of a novice reads: "A novice shall mean a person who has never won a first prize at any show."

Early Hopes.

At the National British Bird and Mule Club's annual ramble two years ago, Mr. Morrison (a member of the City and Suburban A.C.B.) took home with him two Greenfinches' eggs, and put them under a Canary, which duly hatched them and reared the young. One of these Greenfinches has this season been paired by Mrs. Morrison to a Canary, and with such good result that Mules were hatched on April 2nd. This lady has also hopes of four Canary-Bullies' eggs she already has.

HEALTH & STRENGTH

Deals with all kinds of Athletics, including Football, Wrestling, Boxing, Weight-Lifting, Fencing, Running, Ju-Jutsu, Gymnastics of all kinds, Swimming, &c., &c. Gives free advice on all questions of Health, Diet, &c., to all readers.

EVERY THURSDAY, 1d. Sold Everywhere.

Get a copy to-day, or send for Free Specimen to "HEALTH AND STRENGTH," 12, Burleigh St., Strand W.C., mentioning "C B"

"CAGE BIRDS" CIRCULATION.

50,000 Copies a Week.

THERE has never yet been a year in the history of this most progressive journal, CAGE BIRDS, that we have not been privileged to record a substantial increase in our circulation. With this issue it is our pride and pleasure to announce that the 50,000 mark has been reached, the demand for the bird lovers' "original and only organ" having been phenomenally strong despite generally adverse trade conditions. It is in no spirit of boastfulness or swollen-headedness that we record our heartfelt thanks for such a total; we are sensible of many shortcomings and human weaknesses (which we live in perpetual hope of overcoming). It is with a feeling of deep gratitude to the many loyal spirits who have encouraged and aided us on our way, that we proclaim the distance we have gone—that they may all of them be long spared to minister to the requirements of readers of CAGE BIRDS is our sincere wish. To our many friends whose support has brought about such a gratifying result, we tender our warmest thanks, trusting that they may continue to encourage us by their kind marks of appreciation, which, while we are none too conscious of deserving, we shall always strive to deserve.

That well-known bird-dealer and cage-maker, Mr. J. Walsh, of Blackburn, writes: I have left my late retail premises in Regent Street, and have taken the premises, 55, Penny Street (late "Pheasant Inn"). They have been altered to suit my business, and I have now a grand retail shop. I have named it "Pheasant Aviaries." My postal address will now be J. Walsh, Pheasant Aviaries, Blackburn. I still have works and warehouses in Cable Street and Brown Street, as usual.

I hear, writes "St. Mungo," that the newly-formed Yorkshire Canary Club of Scotland is meeting with far more success than was thought possible. The membership is expected to reach thirty before the First Feather show comes round. The total number of pairs being put up by the members exceeds sixty, and with a silver cup and two gold medals to start with, it must be very encouraging to fanciers taking up this variety. Open shows secretaries would do well to give the club every encouragement.

The annual show of the Dulwich O.S., write Messrs. Rogers and Mazzeni, the hon. secretaries, will be held on October 27th and 28th, and Messrs. Mundell, Gardner, and Vale will judge. Young bird show in June with Messrs. Gardner and Robson as judges; British and Foreign bird show in September. Mr. Vale judge. The several handsome cups offered for competition at these shows were on view at the last committee meeting and were greatly admired. The society's silver trophy, value £15 15s., for most points, weighs 49 ozs., and is of elaborate design. Mr. T. Boydon was elected a vice-president.

For Luck?

A Thrush's nest was found on March 30th by a Cuckfield (Sussex) farmer in an old shoe in a field of kale. It had four eggs in it.

Really!

In an argument proceeding about the protection of birds in a contemporary, one of the correspondents remarks, apparently in sober earnest, that "birds should be exterminated because they make such a mess round the chimneys."

A Correction.

In the article accompanying last week's Chart on the Bullfinch, a printer's error occurred. Concerning the cap of the bird, it read that to be "pinched at the front" is a more common failing than to be "narrow at the back." It should have read: is a more uncommon failing.

Our Essay Competition.

The full results of our recent essay competition will be announced in our next issue. We regret the delay, for which the large entry and even merit of the competing essays are responsible. It may interest readers to know that two articles in the Canary section were so even in point of merit that the judges could not decide between them, and a "referee" had to be called upon to settle which should have the first prize.

The N.P.C.

The Year Book and annual report for 1908 of the Norwich Plainhead Canary Club reaches us from the hon. secretary and treasurer, Mr. J. Raynes (9, Richmond Road, Chorlton-cum-Hardy). It is a very tasteful production, and the balance sheet should be highly gratifying to the members, as there remains a balance in hand, after a £10 challenge cup has been paid for, and a deficiency of £4 10s. from 1907 wiped out. The membership roll is an imposing one, and 11 new members were elected during the past year. As the auditors (Messrs. Barker Clegg and Lythgoe) state, the whole affairs of the club are in a most satisfactory state.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

*Oct. 2 and 3.—**Burnley and Dis. C.B.S.**

(*Key to Judges' Initials on page 371.*)

The third yearly balance sheet of the Deal, Walmer and District Fanciers' Association is highly satisfactory, as, despite a £12 deficit on the annual show, the season ends with practically as good a cash balance as it began, which speaks well for the management of the hon. secs., Messrs. Avis and Thompson, and their fellow officials.

That well-known fancier, Mr. Geo. D. Leclair, of 150, Wallwood Road, Leytonstone, N., sends us a sample of his widely-known and used marking rings for Canaries and other birds. They are beautifully made of aluminium, hence wonderfully light, and may be had either with flange (removable) or without. These up-to-date wares should command their usual ready sale.

Cage Birds Charts:

How to Judge Exhibition Birds.

NO. 4: THE BORDER FANCY CANARY.

[See Full-page Drawing and Explanatory Notes on pages 376 and 381 this week.]

In response to the remarkable outburst of appreciative welcome which greeted the chart published with our Birthday Number, we have decided to issue a series of such charts, so that

EVERY EXHIBITION BIRD

of note may have its exhibition points and failings illustrated and explained in the same helpful and educative manner. In this issue No. 4 of the series appears. It deals with the Border Fancy Canary, and the lover of this breed, and especially the beginner, has only to keep the chart in his birdroom to have always before him the ideal to look for and to breed to, while the faults to be avoided can never escape his eye.

In due course many other favourite exhibition birds will be made the subject of one of CAGE BIRDS CHARTS.

The same great pains will be taken to ensure the completeness of every chart, and its accompanying letterpress, and the deft fingers of our artist will portray the excellencies and deficiencies of the birds with the same precision and clearness. The value of CAGE BIRDS latest feature to the novices and amateurs in our hobby will be obvious to all, and we ask our many kind friends to bring

CAGE BIRDS CHARTS to the notice of everyone interested in Bird-keeping and breeding.

Impress upon them that they must on no account miss any one of the series to be issued in the near future, or they will miss a TRULY HELPFUL AND EDUCATIONAL feature never previously put before bird-keepers.

CAGE BIRDS CHARTS may be had beautifully printed on stiff art card, with eyelet holes, for hanging in the bird-room, price 3d. each, post free. The explanatory notes and scales of exhibition points are printed round the margin. No. 1, the Goldfinch, No. 2, the Yorkshire Canary, and No. 3, The Bullfinch, are now on sale, and No. 4 will be on sale early next week. SEND YOUR ORDER AT ONCE.

IN THE COURTS.

BIRD DEALERS AND THE CLOSE SEASON.

In the King's Bench Division of the High Courts, on April 1st, a case of interest to bird dealers and keepers was heard. This was a case (says the "Times") stated by Mr. Biron, a Metropolitan police magistrate, for the purpose of obtaining the opinion of the Court on the application in writing of the appellant Hollis. (1) The respondent, on August 15th, 1907, appeared to an information laid by the appellant and charging the respondent that he did on July 30th, 1907, knowingly and wilfully have in his possession certain wild birds, to wit, seven young larks, recently taken contrary to the statute in that case made and provided. (2) The following evidence was given by the prosecution:—The respondent is a dealer in wild birds, carrying on business at 73, Sclater Street, Bethnal Green, in the county of London. The appellant is an inspector of the Society for the Prevention of Cruelty to Animals. On July 30th, 1907, in consequence of some information he had received, the appellant, accompanied by another man, visited the respondent's premises. He found there a large number of wild birds, including a number of larks. Amongst the larks he noticed seven young larks in separate cages, which he considered were this year's birds, recently taken, because they were very wild, beating themselves against the bars of the cages, and their feathers were of a light colour. The other larks were old birds, and he did not think they were recently taken, as they were quiet and appeared to have been in captivity some time. The appellant stated he had lived in the country as a boy, and had some knowledge of wild birds and could easily distinguish between old and young larks, and he had no doubt whatever that the seven larks in question were young birds. Another witness, Mr. Flavin, an inspector of the Society for the Prevention of Cruelty to Animals, said he noticed the larks were of light plumage and that they were wild in the cages when he inspected them, and that in his opinion they were young larks. (3) No evidence was called to show how or when the birds came into the possession of the respondent. (4) The magistrate's attention was called to the case of "Green v. Carstang" (36 J.P., 102), and he was of opinion that there was no evidence before him that the seven larks in question were recently taken, and he therefore dismissed the said information without calling on the respondent. (5) The question for the opinion of the Court was whether the magistrate was right in so determining. If he was, the decision was to stand. If he was not, the Court was requested to remit the case to him with directions to further hear and determine.

The Lord Chief Justice, in giving judgment, said that Mr. Biron had thought that there was no *prima facie* evidence that the larks in question had been recently taken. It was, he knew, quite possible to have young larks in the month of July. There was evidence that the larks were stated to be young birds and were wildly beating themselves against the bars of the cages, and that their feathers were of a light colour. That was evidence which called for an answer, and in his opinion the magistrate ought to have considered the case further. The case must go back for that purpose. Mr. Justice Ridley and Mr. Justice Darling concurred.

The most delightful and appropriate Postcards for Bird Lovers on the Market are those published by "Cage Birds."

A Few Opinions on our recent Spring Number.

Last week's post-cards were gems.—Jas. Longbottom (Wisbech).

The postcards issued with your SPECIAL NUMBER are a treat in themselves.—S. HILL (Belfast).

Your coloured plates and post cards are beautiful, and a credit to CAGE BIRDS and the artist.—J. Kay (Charlton).

I must say your last week's issue, the SPECIAL SPRING NUMBER, does you great credit, and should increase your sale still more.

Many thanks for coloured plate and post-cards with last week's SPRING NUMBER. They are a treat.—G. F. Woolhouse (E. Dulwich).

YOUR SPECIAL SPRING NUMBER is a treat, and I must congratulate you on the way you have catered for the benefit of the Fancy.—Joseph Smith (Mansfield).

I take this opportunity of congratulating you on your splendid SPRING NUMBER. The post-cards are excellent, and constitute a lesson in themselves.—J. WILSON, secretary of the Kirkcaldy C.B.S.

Thanks for the artistic postcards presented with your grand SPECIAL SPRING NUMBER. They are go up very nicely, and reflect great credit on the artist. The Parrot plate, too, is very life-like.—D. H. TEDSTONE (Brecon).

Your coloured plate and set of post-cards were really a treat. I have distributed all my back numbers of CAGE BIRDS amongst novices, and they are all readers now. Wishing your paper greater success.—JOHN GOVAN (Stonehouse, N.B.).

Allow me to thank you for the grand SPECIAL SPRING NUMBER you have given us. The post-cards of matched pairs are splendid, and not only most beautiful and interesting, but also very instructive, and will I am sure prove a great help to the novice fancier.—E. COWLING (secretary. Morpeth C. and C.B.S.).

Many thanks for the beautiful coloured plate presented with last week's CAGE BIRDS. The sheet of post-cards also is very interesting, the separate cards being very useful to send to friends. I am always anxious for Friday to come so that I may get CAGE BIRDS.—John Fletcher (Grindleford).

Cage bird fanciers should on on account miss this week's issue of CAGE BIRDS. It is a colossal production, and teems with instructive and topical articles contributed by the most practical fanciers of the day; and other subjects are of interest to the amateur as well as the professional. The illustrations are very profuse and of such a varied character as to meet the wishes of the most fastidious. The coloured plate is a novelty and must appease the appetites of all bird lovers.—"Rex" in the "Dewsbury Reporter."

YORKSHIRE CANARIES.

HOW TO BREED, MANAGE AND EXHIBIT.

By H. W. BATTYE (President of the Yorkshire Union Illustrated by Messrs. H. Norman and A. J. Simpson.

Price 1/- nett. Post Free 1/1½.

This book is absolutely the very best that has been put on the market. It deals fully with the Yorkshire and its sub-varieties, and should, without doubt be in the hands of every breeder of the bird of Grace and Beauty. It contains instruction upon Pairing, Breeding, Moulting, Exhibiting and how to treat this popular variety in both health and disease.

Popular Book. Popular Price. 1/- nett, by post 1/1½.

"CAGE BIRDS," 154, FLEET ST., LONDON.

CLUB NOTICES.

One notice of any forthcoming Society meeting inserted free. It should reach us by Tuesday morning's post. Specially printed Club Notice Postcard may be had free on application to our Manager. Secretaries should always use them.

Bury and Dist. C.B.S. — April 14, Textile Hall, Bury, 7.30. Classification, etc., for first feather show. Also other important business. — F. E. Holden.

Brighouse and Dist. C.B.S.— April 14, Round House Inn, 8. Important business.—F. Mitchell.

Bradford West C.B.A.—April 11, Red Lion Hotel, Girlington, 7.30. Judges for Yorkshire Union. At 8.30 a lecture will be delivered by J. Clarkson; friends invited.—H. Clegg.

Belgrave and Dist. F. and F. S.—April 14, New Inn, Loughton Road, 8. Table Show, British Birds, A.S.; general business; committee meeting at 8.—W. H. Riley.

Crook Original C.B. and R.S.—April 15, Crown Hotel, 7. Election of judges for Open Show, Nov. 21st; classification for Open Show, etc.—A. Bowes.

City and Suburban A.C.B.—April 13, Church Institute, 60, Paddington Street, W. Lecture by J. S. Clarke, Esq., entitled "British Birds of North Hants., their Eggs and Nests." British bird lovers especially invited.—V. Wynn.

Coventry O.S.—April 15, Sydenham Palace, Lower Ford Street, 8.30. Paper by Mr. G. Peters on "The Evolution of the Canary." Friends invited.—G. Peters.

Cinnamon Marked Y.C.C.—April 11, Market Tower, Bradford, 5. Annual general meeting, balance sheet, election of officers, and other important business. Suggested alteration of rules; names of classes, etc.—R. Garnett.

City of Bradford O.S.—April 11, Flying Dutchman Hotel, 8. Classification for Members' Shows, 1908. Our selection of judges for Union Shows. Intending members please attend.—F. Rhodes.

East Bowling and Dist. B.F.A.—April 11, Bailey Mow, 7. Business important.—J. E. Hudson.

Glasgow and West of Scotland N.M.B. and F. S.C.—April 14, 122, Ingram Street, Glasgow, 8. All Open Show business.—R. A. Brown.

Houghton-le-Spring and Dist. C.B.S.—April 11, White Lion, 7.30. Important business.—H. Penwick.

Highgate, Hampstead and Dist. C.B.S.—April 24, Spencer Hall, Dartmouth Park Hill, N.W., 8.30. Lecture by Mr. J. Robson, "Hints to Beginners." Fanciers and friends welcome.—W. Reynolds.

Hyde and Dist. C.B.S. — April 13, St. George's School. Table Show for A.S. Brit.; judge, W. Booth. Also night of questions.—T. Allsop.

Leek and Dist. C.B.S.—April 16, Headquarters, 7.30. Delegates' report re North Staffordshire and Dist. Federation.—R. Hall.

Lancashire C.A.—April 11, Great Eastern Hotel, Oldham, 7. Selection of medals which we have decided to give for points special amongst members. Subscription now due for 1908.—W. Adams.

Llanelly and Dist. C.B.S.—April 11, Bird-in-Hand, 7.30.—J. Simon.

Middleton O.S.—April 13, Old Boar's Head, 8. Fixing date of Young Bird Show, and appointing judge for same.—H. Thomas.

Motherwell Norwich Club.—April 11, Y.M. Institute.—J. Muir.

Morpeth and Dist. C. and C.B.S.—April 16, Voses Rooms, 7.30. Lecture by Mr. H. Seely. "Birds I have kept, their breeding and management." Fanciers heartily welcome, both ladies and gentlemen. —E. Cowling.

Manningham C.B.A.—April 11, Mowbray Arms, 5. Annual Tea and Social. Presentation of Cup and specials; etc. Fanciers and friends invited.—F. Western.

North London C.B.A.—April 22, Public Library, Church Street, Stoke Newington, 8. Lecture on "The Breeding Room," by Mr. J. Robson. All fanciers and friends welcome.—R. P. Harper.

National B.B. and M.C.—April 13, "The Napier," 25, High Holborn, 8. To receive the sub-committee's report on the club show cage.—Plumbridge and Carr.

North Manchester C.B.S.—April 14, Christ Church, Schools, Harpurhey, 8. Lecture by Mr. T. Harrison (Altrincham), on Cage Bird Ailments. Friends invited.—J. Davey.

Northern B.B.M. and F.B.C. — April 15, 65, Grainger Street, 7. Table Show, three classes, one Softbill, A.S. (1 Goldfinch, Bullfinch, Bramblefinch, Chaffinch), 1 A.S. Hardbill, all field-moulted.—J. R. Slack.

Perth and Dist. C.B.F.S.—April 11, Danix, Tem Bar, Hannah Street, Perth, 7.30. Fixing date of First Feather Show, and other business.—R. G. Challenger.

Pendleton and Salford O.S.—April 13, Chapel Street Congregational Hall, 8. Table Show of British: entry 6d., paid on the 6d. sliding scale; Mr. Parker Clegg will also lecture on the British Birds; friends invited.—W. Jackson.

Queen's Park and Dist. C.B.A.—April 16, Emmanuel Hall, Harrow Road, W., 8. Important business.—J. C. Birch.

Rugby and Dist.—April 13, "Moat" Restaurant, 7.30 p.m. Exhibition in the Washing of Birds, by Mr. Geo. Hall (Leamington).—C. F. Savage.

Sowerby Bridge and Dist. C.B.S.—April 11, Ball's Head Hotel, 7.30. Monthly meeting and lecture, by Mr. R. Halliday (Shipley), on Pairing and Breeding of Yorkshire Canaries. Members please attend. Friends and fanciers welcome. A. E. Morton.

Sale Open O.S.—April 13, Sale Hotel, 8. Breeding Cage Front Making Competition, election of judges for first Feather Show and Open Show in November; other business, important.—G. F. Hardcastle.

Shields C.B.S.—April 15, Grigg's Cafe, Laygate Lane, 7.30. Report of C.B.U. and other business. Intending members invited.—W. Duke.

Stoke Newington F.A. — April 14, Devonshire Square Church. Young Stock and Annual Shows business.—G. Dowden.

Southport C.B.S.—April 16, Headquarters, First Feather Show, new rule cards, etc.—T. Johnson.

Stonehouse (N.B.) C.B.S.—April 13, 8. Intending members invited.—J. Govan.

Tong and Dist. C.B.S. — April 11, Holme Lane Hotel, 7.30. Joining the Yorkshire Union, and other important business. Also Paper on Yorkshire Canary, by Mr. Bottomley, Laisterdyke.—J. Smith.

United Kingdom L.S.—April 13, Spinners' Arms, Oldham, 6. To decide colour of show cages, etc.—F. Greig.

Wolverhampton and Dist. C.B.S.—April 14, Prince Albert Hotel, 8. Mr. F. J. Weaver will give an address on Bird Breeders' Difficulties and how to surmount them. Fanciers invited.—F. Howes.

York C.B.S.—April 13, All Saints' Schoolroom, 8. Open Discussion and Smoking Concert.—A. Wand.

ORDER YOUR "ANNUAL" for 1903 AT ONCE.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** 151, *Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

Queries will be answered under the following conditions:—

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life—**H. Norman.**

NOTE.—If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Injudicious Management.

No Name.—I think this aptly defines the cause of your troubles. In the first place, a diet of mixed seeds as a staple is not good management. The staple diet should always be plain Canary seed. At this time of year a fourth part of rape may be added to it if desired, but even now it is best to give the rape separately, say a pinch every second day. The cocks should also be given a pinch of rape twice a week, and the hens a like quantity of inga instead of hemp. A teaspoonful of egg-food, or a small piece of bread dipped in milk, should also be given twice a week, and a little green-food daily. Your room is the next faulty point in your management. You say it is a spare room kept warm by the hot-water pipes to the bath-room running through it. As these pipes are probably cold at night, it must cause the heat to be very variable, which would quite account for your bird being now in moult. You must now see that the birds are kept in a fairly equable temperature, give a small piece of sponge cake slightly moistened with sherry every second day, and on the intervening days add twenty drops of chemical food to the drinking water. Continue this for a fortnight if necessary. Do not mate the birds until they have quite recovered their vigour.

Caged or Loose.

F. Latchwell.—It is very doubtful whether you would succeed better by allowing your several pairs of birds to fly loose in your undivided aviary, or restricting them to several compartments. The fact that your birds which accidentally escaped from their compartment one day began to build a nest the next day is probably merely a coincidence of circumstances. If you allowed the birds to fly loose in the whole aviary as you suggest, you would not need as many cocks as hens. If the cocks were too numerous there would almost surely be trouble amongst them from constant quarrelling and interfering with each other's nesting arrangements. In the whole aviary four or five hens and two cocks could be run; and at least seven or eight nest boxes should be put in. Altogether I would advise you to adhere to the single pair in separate compartments method as being the most generally satisfactory, and giving you better control over the breeding arrangements. The reason your birds did not begin nesting sooner after mating them is that you put them together rather too early, and probably before they were ready.

Feathers Flying About.

Chadderton, Slater.—1. The fact of the flying feathers is the obvious cause of your birds not getting along, as you put it, after being mated for a week. As we are saying now in almost every issue, it is utterly useless putting birds together for breeding until ready, much less mating them whilst losing feathers. The birds have doubtless been exposed to great variations of temperature. Providing the place where they are now kept is not considerably warmer than the bedroom, you might make the removal now, but if it is much warmer then you must keep the birds where they are until they have ceased moulting. Separate them at once, and keep free from draughts and chills; give a small piece of sponge cake slightly moistened with sherry every second day, and on the intervening days give twenty drops of chemical food in the water. Give a leaf of dandelion or spray of watercress daily. Do not give cold baths except on mild, sunny days. And do not mate them up again until both sexes are ready—no matter if it be the end of April before that occurs. 2. Treat the Roller, which has not sung since August, the same as above for a fortnight and note result. Are you sure it is a cock? If above treatment does not draw it out, I should rather doubt its sex. Most certainly he will be no good for breeding until he comes into song.

Breeding in Aviary.

M.L.—1. The kind known as cigar-box nests, and an ordinary wicker German travelling cage, are about the best type of nest-boxes to put up in an aviary. The cigar-box may be made with any box about the size of a cigar-box, all that is necessary being to cut off a third part of the length of the lid; nail the other part down securely, and hang them up endwise, with the cut out part at the top, so that the lower part forms a receptacle for the nest. With the German cages break out seed box at the end, remove the water-pot, and take out three or four of the short bars. Hang them in any nice quiet odd corner, but somewhere near the ceiling preferably if the aviary is low, which the birds seem to favour. It is best not to encourage them to nest in the tree branches in an outdoor aviary. The situation is too exposed for safety. 2. You should add hemp and rape to your dietary, of which give a little two or three times a week. When there are young about you must also add egg-food daily—unless you wish to experiment without it. Of course, you give green-food daily. 3. In an outdoor aviary there is rarely any necessity to remove the eggs as laid. You will probably do better by leaving them alone, and interfering with the nests as little as possible.

Some Seed Samples.

W.H.P.—No. 1 Canary contains a good number of grains of extraneous seeds, and also a number of empty husks, and is of poor flavour. I suspect it has been badly stored, and perhaps rifled by mice, so that although it is a good-sized seed I should reject it at any price. No. 2 Canary is of fair size and good quality; No. 3 Canary is also a nice quality, and is rather larger than No. 2. Except in size there is practically nothing to choose between 2 and 3, and as the difference in size is not very great I should consider No. 2 at 6d. per peck less the cheapest. No. 4, summer rape, is a good sample, but seems rather new. As regards the mixture No. 5, I forget what your former question was about it. As an occasional tit-bit for Canaries it would do very well, but I should not regard it as suitable for a general diet either for Canaries or Finches. The bulk of it, Canary and rape, is of very second-rate quality. It consists of the following seeds in varying proportions: Canary, rape (mostly winter rape), inga, linseed, teazle, hemp, millet (red and brown), maw, carraway, and aniseed.

Champion Light-Weights.

"Disheartened."—I do not think your pseudonym is happily chosen. You certainly have no good cause for being disheartened because your birds seem rakier than you ever saw any before, seeing that they appear quite healthy, tight in feather, the cocks in song, and the birds breeding all right. Is it not generally the rakiest-looking parents in every class who can show the most numerous and healthy progeny? You will soon improve their condition by giving a little bread scalded with milk and pressed nearly dry, and with a little cod liver oil emulsion well mixed with it three times a week. Add the oil in the proportion of a teaspoonful to sufficient bread and milk for ten or twelve birds. Twice a week give a teaspoonful of hemp per bird, and on each of the other days a little scalded rape seed. A third part of your stock mixture may also consist of dry rape. The sample of hemp you sent is of very poor quality. Although it is of good size, it is light, and contains a large proportion of green unripened seeds and damaged grains. The rape is also very poor. It is obviously a mixture of different kinds, good and bad, and is too large for summer rape. All the other seeds are of very nice quality. The Canary is very good.

Aviary Queries.

"A Constant Reader."—1. It depends a good deal upon the size and arrangement of your aviary what you should whitewash it with. If it is a large place, or you keep the birds in it in separate cages, then by all means use limewash, as being the best from a sanitary point of view. But if it is a comparatively small place in which the birds fly loose, use either one of the sanitary distempers now on the market, or whitening, which may be coloured to any desired tint with paint powders. 2. Either the limewash or the sanitary distemper as above helps considerably to keep red-mite at bay. In addition to this you may use a little quassia in the bathing water once or twice a week; dust any shelves, nesting boxes, cages, each with pyrethrum, and touch up any likely harbouring places occasionally with fir tree oil, or carbolic fluid. 3. Nailing pictures on the walls would certainly afford shelter for mites if the place got infested. It would be much better to hang up any such decorations loosely by a narrow tape, or put them in cheap frames, so they could be taken down at frequent intervals and backs of them and the wall cleaned.

A Pointed Question.

Tom Gray.—No, of course not! The wild Canary does not feed its young upon egg and bread, because these luxuries of civilisation are not accessible. Being a member of the Finch tribe, it probably rakes its young on a diet of half-digested seeds, vegetable food, and insects. But I do not hesitate to say that if you placed a dish of egg and bread anywhere within range of a pair of wild Canaries who were feeding a nest of young, the chances would be "all Lombard-street to a penny orange" that as much of that egg and bread as the parents could stow away in the maws of their hungry broods would find its way there in double quick time, notwithstanding all its risks, and the unnaturalness of it altogether. Your suggestion of mixing egg-flake and pin head oatmeal as a substitute for egg and bread does not do away with the egg after all, and I doubt its practicability. Oatmeal in large quantities is much too heating for caged birds, and even adult birds are often affected with a serious bowel disorder when given oatmeal in any quantity, so I should scarcely expect it to answer very well when used as a chief article of diet for young nestlings. Still, there is no reason why you should not put your ideas to a practical test in the coming season. But take my advice: don't go "the whole hog" at the start. Try it first on one brood, and go on to others gradually if you find it answers all right. Personally, I have little doubt what the result will be.

Cleaning out Neglected.

Henry R. Stone.—I imagine the reason why writers on cage bird topics are not more precise in saying when the cages should be cleaned out is that they assume this essential part of the hygiene of bird-keeping is carried on just in the same way when the birds are breeding as at other times. This is certainly what should be done, with this slight modification, that if you clean out the cages once a week all round, if cleaning out day should fall on some such critical day as when young are hatching, or hens just setting down to setting, or have half a clutch laid, you may skip those particular cages for that one week, and clean them as usual afterwards. It is emphatically a case, however, where one has to exercise their own individual judgment, as if one sees they have a "touchy," nervous hen to deal with it would naturally be very unwise to disturb such a hen from the time she began to lay until the young had reached that age at which the cock takes upon himself a fair share of the feeding of the young, and in these cases it may be necessary to omit cleaning those cages for two consecutive weeks. You should certainly not move a pair of birds to another room away from other birds when they begin to nest. To do so might stop them breeding for weeks. Leave them in their usual position; the presence of the other birds will not disturb them. Very glad to hear the former advice has already done the bird good.

Hens Dying after Laying.

A.W. (Glasgow).—It is quite possible for a hen to be egg-bound with the last egg of her clutch, in which case the egg responsible for the trouble is almost invariably a shapeless or an imperfectly shelled one. The cause, if not due to a chill brought about by a sudden and great drop in temperature, is doubtless due to exhaustion from the efforts to produce the first part of the clutch, and this would mean that the bird was naturally weak in constitution. Such a bird would benefit considerably by a fortnight's treatment with twenty-drop doses of chemical food every second day in the water, and on the intervening days a small piece of sponge cake with five drops of cod liver oil emulsion mixed in it. After steaming the bird you should have kept it in a warm place and added half a teaspoonful of brandy and ten drops of glycerine to its water. A drop of warm olive oil, or even glycerine, dropped on the vent just previous to steaming would also have helped matters.

A Prelude to "Passing."

Electrician.—As your birds have developed symptoms similar to what has occurred in previous years you appear convinced that "they will die about May, when the weather gets warmer." Very well; try the treatment advised, and let me know how your fears are verified in May. In the first place there must be something radically wrong with your treatment or foods for the birds to get such a bad form of diarrhœa. The excessive drinking is simply due to the diarrhœa. Now treat as follows: For staple food, Canary seed only; and, in addition, give one day half a teaspoonful of rape seed per bird, next day the same quantity of hemp seed, and on the third day a teaspoonful of crumbs of stale sponge cake. Repeat these again and again in same order until all looseness ceases, and withhold green food and cold baths until such time. In the drinking water give as much prepared chalk as will cover a threepenny-piece, and the same quantity of carbonate of bismuth every second day, and on intervening days give five drops of aromatic sulphuric acid. Boil all the water before using whilst giving the treatment. Keep the cages scrupulously clean, and cover the floors with a good layer of pine sawdust whilst the diarrhœa lasts.

Birds Bare and Casting Feathers.

John K. Grace.—Although you speak of your room as a cold one, coming after one in which the temperature has varied considerably, I should regard it as a fairly warm one, seeing that the temperature is kept entirely within the range of 55 and 58 degrees. This may be responsible for the birds casting feathers. Instead of the milk sop you are giving give a small piece of sponge cake with a few drops of sherry upon it every second day. Give the mixed seeds twice a week only. Discontinue giving sulphate of iron, honey, and glycerine, altogether, and give instead to those that are losing feathers twenty drops of chemical food two days in every three, and on the third ten drops of glycerine and five of tincture of steel. Continue this for two or three weeks as may seem necessary. For the birds that have colds give twenty drops of whiskey, ten of glycerine, and ten of syrup of squills two days in three, and on the third day give pure water. Continue this for a fortnight, if necessary. See that the birds are not exposed to draughts or chills.

Bald, but Sings Well.

Minty.—No, I cannot tell you why your bird should sing so well in spite of its disreputable condition of plumage, beyond saying that it must be in tolerably good health generally—otherwise, it certainly would not sing. The bareness at the wing butts, as well as upon his head, is strongly suggestive of red-mite attacks, and the fact that you cover the cage over at night is another point in favour of such pests getting a footing in it. Use a light-coloured cover for a time, and examine it carefully each morning to see if any mites are upon it. Also examine the cage minutely, probing any crevice that may be about it with a pin on to a piece of white paper. If any mites are found, thoroughly disinfect the cage to eradicate them. Give the bird half a teaspoonful of egg-food twice a week, and add twenty drops of chemical food to its drinking water every second day for a week or two. Also put a few drops of essence of quassia in the bath twice a week.

An Obstinate Cold.

R. F. Cook.—The change from the hot room to your bath-room is doubtless the cause of this obstinate cold. Drop the egg-food for the present, and give instead a small piece of sponge cake slightly moistened with sherry wine three times a week, and in the drinking water give twenty drops of whiskey, ten of glycerine, and five of sweet spirits of nitre every second day for a week. If there is no improvement at the end of that time ask a chemist to mix you one drachm syrup of squills, three drachms glycerine, and two grains iodide of potassium. Add to this four teaspoonfuls of whiskey, and give the bird twenty drops in its drinking water every second day for a week, or longer if necessary. Do not give cold baths whilst the bird is ill, and see that it is not exposed to any draughts or chills. The cock bird would be best by himself whilst hen is under treatment.

Seeds for Young Canaries.

K.J.—Your questions are certainly a trifle vague. You ask what seed you must give young Norwich Canaries, and how soon such seeds may be given after the young are hatched. If you mean what seeds should be given before the young leave their parents, then the answer is that the usual staple of Canary seed should be at the parents' disposal continually. Egg-food, or any substitute you may favour, must also be regularly supplied from the day of hatching. When the young are a week old a constant supply of cracked hemp may be added, and a few days later, if thought advisable, a supply of soaked rape. Give fresh green food daily after the first three or four days. On the other hand, if you wish to know what seeds to give the young birds after they leave their parents you should allow them access to a supply of Canary from the first, a little cracked hemp, and a very small quantity of scalded rape; a little egg-food or crushed biscuit, or bread and milk, should be given daily. Indeed, the birds will have access to these things before leaving their parents, and should be quite able to crack Canary seed for themselves before being taken away. If the parents do not ill-treat them, the young will be all the better if left with their parents until the hen goes to nest again, when they should be removed to prevent them interfering with the nesting arrangements.

Eats Well, but keeps Thin.

Kibbroney.—Treat the hen which eats enormously, shells what seed it does not eat, and keeps very thin, as follows: Each day allow a small teaspoonful of Canary seed as a staple. In addition to this give a leaf of dandelion daily. Give one day a small teaspoonful of hemp seed, next day a piece of bread dipped in milk, and with five drops of cold liver oil emulsion on it, and on the third a small teaspoonful of scalded rape seed; then begin again and repeat the three last items over and over again in the order named for two or three weeks. You may, if you wish, vary the bread and milk occasionally by giving a piece of sponge cake instead. In the drinking water for the first two days give as much Epsom salts as will cover a sixpence, and ten drops of whiskey, and after that give twenty drops of chemical food every second day, and on the intervening days five drops of aromatic sulphuric acid. Continue for about a fortnight, when you may discontinue the medicines, but go on feeding as suggested until the bird is in good condition.

Brevities.

No Result (Disappointed).—This is the usual result of pairing up too early, which is exactly what you did by about three or four weeks. Assuming the birds to be cock and hen, you should have kept them apart until the cock was in full song, and both birds anxious to mate. Your feeding also is at fault. See reply on this subject to "No Name" in this issue, and act accordingly, and if you give the cock a little sherry-moistened sponge cake, as therein advised, in addition, he should, if really a cock, soon come out in song. I am, however, strongly inclined to think that both your birds are hens. Look up these replies for the last month for information on how to distinguish the sex of Canaries, or get some good fancier to look at the birds and tell you what sex they are.

Sits Mopy and Feathers Loose (J.H.E.).—Although you say you have examined carefully, and cannot find any red-mite, I am inclined to think this is one cause of your bird's condition. Did you examine the bird, or the cage? Examine the latter, and probe any crack or small crevice with a pin on to a piece of white paper, then you will be more likely to discover them if any are present. Continue to feed the bird as you are now doing. Cease giving Epsom salts, and give instead fifteen drops of chemical food in the water every second day, and on alternate days give five drops of tincture of steel. Keep the bird quite free from chills and draughts.

Cock Canary Gaping (W.J.H.).—As you say both your pairs appear to be in good health, I do not think there can be anything wrong with the cock who sits gaping with his beak half opened. You will probably find, if you pay heed to the matter, that when sitting and acting in this idiotic manner he has his attention rivetted on the hen, and will also at times, but not always, be heard making a low squeaky noise. As a matter of fact, he is simply "setting his cap" at the hen, and trying to attract her notice. As he frequently feeds her, they must be going on all right, but slowly. Perhaps they are very young, and not quite ready for breeding yet. Be patient with them a little longer, and I expect things will soon begin to look brighter.

Making Egg Flake (Tom Gray).—I cannot tell you what method is used to prepare the egg flake which is on the market. The chief object must be to get rid of surplus moisture. A method which would succeed well would be to separate the yolks from the whites, and beat the former together with a small quantity of finely-ground oatmeal, spread thinly on the bottom of shallow pans, and keep exposed to a current of warm and dry air until all superfluous moisture has evaporated; then scale it off the tins, break into flakes, and store in air-tight tins for use as required. Unless you have certain conveniences for carrying out the process it would doubtless be cheaper to buy than to attempt to make it.

An Extraordinary Egg (W. T. Williams).—The cause of your hen laying for her first egg a massive production of an inch in length, is, in all probability, an undue activity of the ovaries. The egg is a double-yolked one, just the same as are sometimes produced by poultry. This will be of no use for hatching. Both germs might, and probably would, develop up to near hatching, when both would almost certainly perish. Or a deformed freak might be hatched, which it were much kinder not to bring into being. The laying of this egg will not affect the remainder of the clutch. I should be inclined to doubt the sex of the Roller which has not sung since you purchased it four months ago. Give thirty drops whiskey and ten glycerine in its water for a few days, and if a cock, and healthy, this should draw it out.

Will They Breed? (F. Harrison).—See reply to "Beginner" in last issue. Like him you made a very premature start, which is the cause of your birds not attempting to get any "forrarder." You can only await the course of events now. As the weather gets warmer the birds will naturally set to work. You might help them on a little faster by giving a teaspoonful of egg-food slightly sprinkled over with gold of pleasure seed to each pair of birds every second day, and on the intervening days a pinch of hemp and inga mixed together. Give a leaf of dandelion daily. Of course, you will discontinue these extras when the birds have really gone to nest.

Not Lively, Nor Singing (F.S.C.).—If you had given me some information as to how it is fed, it would have helped me to tell better why your cock Roller is neither lively nor in song. Assuming it is a cock, it may be only waiting for the weather to get a bit milder. Many songsters, after their first two seasons, do not re-commence their song until the weather gets mild and settled in spring. But nearly all healthy cocks should be starting their song again by now. Feed on a staple mixture of two parts Canary and one part summer rape. Give also a crumb of sponge cake moistened with sherry

three times a week, a pinch of hemp seed twice, and a leaf of dandelion daily. In the drinking water give thirty drops whiskey, ten glycerine, and as much chlorate of potash as will cover a sixpence, every alternate day for a week.

Slipped Claws (E. W. Jeeves).—This is what troubles your three-weeks-old Canary. It ought to have been attended to as soon as you noticed it, or as soon as the youngster left nest. Get a small piece of rubber tubing the same as that used on a baby's feeding bottle; cut off two quarter-inch lengths, and place one on each of the bird's legs, by pushing them over the three front claws and upward on to the "shank of the leg," to use a popular phrase, keeping the hind claw folded back against the leg and within the rubber band. Leave them in this position for a fortnight, when you may remove them, but should the hind claws again come forward at once replace the bands for a time.

Will it Disqualify? (Learner).—No, an ordinary marking ring on the leg of a Canary, provided it is of the ordinary type and not distinctive in any way, would not disqualify a bird at any show.

Clicks its Beak (T.J.S., Brum.).—As the bird seems all right in a general way beyond making a clicking noise with its beak as though it were cracking seed, I do not think you need trouble about it. Many birds do this which are quite healthy. Still, if you wish to try something, give it twenty drops of whiskey in the drinking water and every second day for a week as much Epsom salts as will lie on a sixpence. This will do no harm in any case, as you are obviously overfeeding the bird. Instead of giving a tablespoonful of the egg flake give a small teaspoonful, only twice a week, and half a teaspoonful of mixed seed twice a week. Give a spray of green food daily.

Minus a Tail (W.R., Motherwell).—Providing the bird is in good health generally, the loss of its tail by an accident—presumably unskilful handling—will not prevent it breeding successfully. But as the season is still fairly early you would do well not to mate him until the new tail is showing well through, which should be in three weeks' time, or a little sooner if the bird is vigorous. You may give him ten drops of chemical food every second day to help him.

Why it Does Not Sing (F.C.).—The reason why your eight-months-old Norwich Canary does not sing, although it is very lively, and sometimes "sits and mumbles away to itself," is that it is a hen. I think this is certainly the correct explanation. But if you doubt it, try the following for a fortnight: Give a little sponge cake slightly moistened with sherry three times a week, and every second day add twenty drops of whiskey and ten of glycerine to its drinking water. If that does not draw it out—better vote it "a hen."

Seed Samples (Northfield).—There is really very little to choose in the three samples of seed sent. No. 1 and 2 are practically just the same. Both are bright, very sweet, and good seeds, but are rather small. That is their only fault. No. 3 is slightly larger, but not quite so nice-flavoured, although it is sweet. Of the three I should prefer No. 1, the quality of which will not easily be beaten, although it is small.

A Vicious Hen (Perplexed).—I am afraid you will not do any good with the pair of birds you write about. The hen is evidently one of those who require a vigorous, masterful cock, and the cock you describe is probably still a little run down from his recent moult. Keep them separate now until you see the hen go to the wire slide promptly for the cock to feed her, and in the meantime feed up the cock by giving him a little egg-food or sponge cake every second day, and a half teaspoonful of hemp seed, or scalded rape, on the intervening days, and three times a week give him six drops of tincture of steel in his water. Give a leaf of dandelion every day.

A Prolonged Moult (Puzzled, Birkenhead).—You must now see the value of a regular temperature for birds. It was the variable heat of the kitchen which kept the bird in moult for so many months. Leave him in the room you have now put him in, see that he is not exposed to any draughts or chills, give him twenty drops of chemical food in his water every second day, and on intervening days five drops of tincture of steel, and a small piece of sponge cake with a few drops of sherry on it every second day. Continue this for a fortnight or three weeks, with the exception that you should discontinue the tincture of steel regularly, and give it once a week only after the end of the first week. The seed mixture you sent is scarcely suitable for regular use for caged birds. A plainer diet as a staple, and a little of this mixture occasionally as a treat would be better.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. Weston.

Outdoor Aviary.

Novice.—The plan of your aviary seems admirable, and it ought to be a great success. It would hold in (a) 35 to 40 birds, depending on the foreigners and their size; in (b) about 18 birds. Blackbirds are quarrelsome, and the pair will have all you can with safety turn it in. Jackdaws are mischievous beggars, and I feel sure would be dangerous with birds smaller and less powerful than themselves. I wouldn't think of putting them with Thrushes, personally, nor with Quails. It would be better to have two upper openings, and also have the windows 2 ft. by 2 ft., if possible.

Linnet goes off Song.

F. E. G.—This is a point which often puzzles and upsets beginners. It is quite a common occurrence, however, for the male bird to cease singing (except, perhaps, at brief intervals) when finally mated up. If you were to take your Linnet and put him in a nursery (or other suitable) cage, hanging the latter on the front of the breeding cage, then you would, I feel sure, soon find him burst into song. If he gets on with the hen alright (the absence of song is usually a sign of this, when there is no fighting), then you need not worry;

Some Large Birds.

H. S. Welsh.—A brick aviary 16ft. long, 8ft. high and 5ft. wide will answer admirably to keep two Jays, two Magpies, a Jackdaw and a Chough in. They would make a most entertaining collection, and I do not think you would find them quarrelsome. I cannot speak for certain on the latter point, as it has never been my good fortune yet to reserve an aviary for members of the Crow family. They are, on the whole, very friendly disposed towards each other in their wild state. You might have trouble if at any time you suddenly turned a newcomer in amongst the old frequenters, so to speak, of the aviary. The Chough wants feeding very much on the same lines as the other birds. Jackdaws, Jays, Magpies, and birds of this class need to be fed on very similar lines. The best and cheapest way to feed is to utilise table scraps largely. As a stock food you could use broken-up dog biscuits (or puppy cakes or game meal) with coarse crissel—say two parts of either of the former to one part of the latter (by measure). Moisten with hot water, giving it crumbly moist, and mixing with it table scraps, cooked meat, and potatoes, greens, gravy, etc. Give a few trapped mice, young Sparrows, and the like, but not over much raw meat, for much raw meat and offal makes their excreta more than ordinarily offensive; always keep them scrupulously clean. Eggs (raw or cooked), acorns, nuts, peas, berries, fruit, worms, beetles, and grubs are other things they will eat, not forgetting little frogs and the little mice. Spratt's "Game Meal" (without grit), or Clarke's "Melox," or any foods such as these, make excellent stock foods for these birds—with a little crissel and the other things mentioned. Jackdaws and their relations have very varied tastes.

Linnet with "Wing up."

Barnoldswick.—Your bird has its "wing up," as fanciers term it. This trouble is due to fracture, or injury of some kind, to the shoulder, and cannot be cured. Sometimes if a bird is handled clumsily, its wing gets broken, and sets in the unsightly fashion you describe. What caused the injury to your own bird I could not, of course, say. If you did not notice it when you bought the bird, you may have done it when carrying it home; or the Linnet may have locked its wings between the cage wires at some time or other.

Mating Matters.

W. M. Cd.—The Goldfinch which has gone through a cross-moult may breed alright somewhat later in the season, seeing that he has got over it so satisfactorily. It is no use pairing up until he is thoroughly fit (see other replies this week). The yellow hens ought to breed with the Goldies—make them very good mates, in fact. I cannot understand how it was both hens failed to show even so much as a desire to go to nest last year. Possibly an error of youth, we will charitably assume. You ought to do alright with them this season if you treat them on sensible lines.

A Swelling.

Gele Noviee.—I have never had a Goldfinch come with a "big swelling on the right side of the chest." Only a qualified man (such as a veterinary surgeon) could tell you the nature of the growth, and whether there is any possibility of a cure. If you happen to know a medical man who is a lover of birds, you should ask his opinion of the case. If it is merely an accumulation of air under the skin (a condition of things which sometimes obtains among birds, and which you should be able to recognise on examination), then pricking the skin with a needle will relieve matters.

A Trio.

No Nom-de-Plume.—1: An English Goldfinch of good size is certainly not too small to pair up with an English hen Bullfinch. Of course, the latter vary considerably in size, and on her size depends the size necessary in the Goldfinch. You must use your judgment; plenty of latitude may be allowed oneself in the matter. 2: How long ought a cock Goldie to be caged before one can expect it to sing? The answer to that question depends on the disposition of the bird. I have had English Goldfinches commence to sing within a week of their capture. They have been very "kind" birds, that is, have taken readily to cage life. A wild natured bird is sometimes months and months before attempting to sing. There is no specified length of time, but if well over the moult when caught, then a cock bird should open out in song as soon as he gets settled down to captive life. 3: A breeding hen Bullfinch should have a little lightly moistened insectivorous food (it may be damped with grated raw carrot, or finely minced lettuce, dandelion, watercress, etc., leaves), or a few ants' eggs, moistened with raw milk and drained, and a mealworm or two if she cares for them. Give all three things (alternately) if you like. You can also offer a little egg-food now and again, too.

Feeding Young Mules, etc.

Novice.—1: The canary seed looks a very decent sample; not over-large, but very clean, plump, and well ripened. The niger (or inga) seed is quite satisfactory, too. 2: I should say the two birds may be run together right away, especially if the Goldie's beak is clear, or nearly clear, that is, has lost the dark mark seen on the top of the upper mandible during the winter months. 3: No; I experience no difficulty in rearing young Mules after they have left their parents. Sorry to bear of your own losses. I will give you the exact methods I adopt, with pleasure, and you can try them. When the young mules commence to pick about for themselves, I let them have maw seed in plenty, also plain canary seed, lightly cracked by running a jam jar over it. At this time also I let them have their fill of the ripe seeding pods of shepherd's purse and chickweed (no leaves, except a few tiny ones which it is difficult to remove). As Soft food they get biscuit (or an egg-cake, which I bake), made quite sloppy with new milk. I put very little minced hard-boiled egg in this, believing it policy to drop the egg—but not the soft food—when weaning. As they get on to seed, I add cracked sunflower to the menu, lightly cracked hemp (made fresh every day), and ripe teazle. Water I never give ad libitum (the milk suffices, and is much better) at first, but get them on to it by degrees. I drop cracking the hemp and canary as soon as possible. The chief causes of failure to rear young birds (either mules or Canaries) after they have left their parents are, in my opinion (1) allowing them to "burst themselves" with cold water; (2) ditto, with watery greenfood, such as lettuce leaves, watercress, etc.; (3) giving egg-food made too strongly; (4) taking them off soft food too suddenly.

Brevities.

Hemp Seed (W.H.P.).—This hemp seed is nice and clean, and the kernel good; the chief thing I do not like about it is the want of uniformity in the size of the grains. The price (2s. peck) is high; you ought to get excellent hemp at that figure.

Jackdaw and Finches (E. W. P.).—You will be very unwise if you try to keep a Jackdaw in the same aviary as Finches. My own old Jackdaw killed and ate Sparrows with great gusto, and no doubt your own Jack would while away the hours in slaughtering your small birds.

A "Crossed" Beak (A. B, Hanley).—I find it difficult to understand what is the matter with the Goldfinch. Pity you did not add a rough sketch of the beak. I never heard of a bird knocking its mandibles across and being unable to get them straight again. If the "crossing" is due to one or other of the mandibles being overgrown, then cutting with sharp scissors would soon put matters right. Could you explain the trouble more clearly?

Goldfinch Ailing (R. H. C., Frizinghall).—Your Goldfinch has not got a cold, it is constipation that troubles him, as the action you describe clearly goes to show. This is the result of the sudden change of diet, which was an injudicious thing for you to treat him to. For one day dissolve as much sulphate of soda as will lie on a shilling in two tablespoonfuls of drinking water. Repeat after a day's interval on plain water, but using only half the quantity of the sulphate of soda.

A Puzzle (Tom).—You puzzle me when you ask which British bird would be the best to breed good songsters from. It is difficult (possibly you do not know this) to breed British birds in cages. You would find it much less trouble, and probably very much cheaper, to buy them from a bird dealer. You could with comparative ease breed mules from either Linnet or Goldfinch, and a hen Canary, and these would turn out better songsters than any British seedeater.

A Goldfinch (J. J. Ellis).—A last year's Goldfinch ought to prove a very good bird for muling purposes. When in full, stout song, and with beak clear (or nearly clear) you can safely venture to pair him up. Often it is the end of April or beginning of May, before a Goldfinch is ready. They are late breeders in a state of nature. Every bird has to be considered by itself, that is, according to its own condition; some are always more "forward" than others, even if fed the same and kept under similar conditions.

A Greenfinch (A. Gardner).—Some cock Greenfinches are distinctly brownish in tone of colour, but always show more yellow in flights and tail than a hen. As yours carries plenty of gold, and sings, you can depend on it being a cock.

Wild Seeds (Perplexed).—Examination fails to reveal anything which seems to me likely to have been responsible for the deaths of the birds. It looks like the ordinary "wild seed" mixture, sold so widely now. You could test the matter by trying it on another bird, if you have one you can spare should it prove fatal. I would test it myself if I happened to have a bird whose loss I could view with equanimity in your interests.

Table Aviary (Aviary).—In a table aviary 18 by 16 by 11 inches, you could get far more pleasure out of a collection of small seedeaters than out of British birds, providing the wire mesh is half inch (or five-eighths). Our Mr. Page would give you a list of cheap and suitable species.

In an Aviary (A. G. Beeston).—The place you mention is quite large enough to house three pairs with prospect of success. You might add a cock Siskin. If any one particular bird turns out an inveterate squabbler, remove it. I have heard of the Goldfinch-Chaffinch cross, but the alleged young were never reared to maturity. Like you, I should imagine a Hybrid from this cross would be very handsome.

FOREIGN BIRDS.

Answered by Wesley T. Page, F.Z.S., M.B.N.H.S.

Young Grey Parrot III.

Hitchenough.—Seeing that your bird was brought over privately, it should have done well on the treatment given. I note you have already lost one bird, and if this bird occupies the same cage, it is probable it has become infected therefrom. A cage, after its occupant has died (more especially with these birds) should be thoroughly sterilised before being used for another bird—the method I employ is to first scald out with boiling water, thoroughly swilling out all crevices; then paint well with neat paraffin, let it stand for 24 hours, and finally well swill it with clear cold water and leave out of doors to dry. All you can do in addition to treatment given below, is to keep it warm, and out of draught, and hope for the best. For one day only put half a teaspoonful of Dinneford's magnesia over its boiled maize, and repeat same after an interval of three days. Twice a day bathe or spray its nostrils with diluted glyco-thymoline, and for some time to come make its drinking water the colour of pale port with Parrish's chemical food. Do not give slops or table scraps, or you will only make matters worse.

Madagascar Weavers.

J.L.G.—I fear there is but very little chance of their nesting in captivity. These birds (Weavers, Bishops and Whydahs), though very busy nest builders, very seldom make any attempt to reproduce their kind, not even in the largest of outdoor aviaries. Practically, covering all species of these birds, there are only one or two cases on record of any success having been attained. However, the keeping of these birds in captivity is most interesting, their courtship, their skilfully-woven nests, as well as their brilliant plumage when in summer dress, all tend to make them popular aviary birds. My Madagascars have been out of doors all through the winter, and are now in almost full colour. Your birds should commence to come in colour almost at once, and with the warmer weather the change should be fairly rapid. You have space for about a score of birds, but certainly for not more than half that number if you want breeding results. Ribbon, Zebra, and Spice Finches, White Java Sparrows, Bengalese, Grey Singingfinches, and Silverbills. A few small Waxbills would add a charm to the aviary, but they would not breed, neither would they interfere with the others doing so.

Young Grey Parrot.

Supelli.—Grey Parrots on arrival, while they must not be kept where the atmosphere is at all stuffy, must be carefully protected from draught, and a rapidly fluctuating temperature should also be avoided. It should be sufficient to give these birds the regulation diet: a seed mixture of Canary, oats, wheat, dari, hemp and sunflower seed; with ripe fruit, plain biscuit, cuttlefish, and water ad. lib. If it refuses food, you might tempt it with a little boiled maize, but do not continue this for any length of time, as it is not so wholesome as the seed diet. In lieu of the chemical food give one teaspoonful of Dinneford's Magnesia in the drinking water (two tablespoonfuls) and repeat the dose in three days' time, giving the chemical food in between and continuing same till the bird has recovered. Bathe the nostrils with diluted glyco-thymoline; this will do much better than the acid, and it will do no harm if a little is swallowed. The birds must have been in a draught while windows were open for airing room, or something similar. Do not give any slops, table scraps, or animal food of any kind.

Causes of Colds in Parrakeets.

M.G.L.—The causes of colds in Parrakeets kept in an outdoor aviary are various (though I must say I've never been troubled with such complaints, which in the indoor aviary are fairly common), such as, sharp and sudden changes of temperature, especially as has been the case recently, where the temperature has varied considerably several times in a single day—again, a shelter used in which there are cracks or badly-made joints occasioning draughts, and an unsound roof. Such species as you name are kept in a very exposed aviary in my garden (London), and have been out of doors now several winters, and have come to no harm. And, providing your aviary is weather proof, your birds ought to do well, but an aviary should never be constructed so that the wind can blow through it. If both the ends of yours are open, I should certainly advise their being closed up, say, partly with wood and glass outside the netting. If any of your birds are really ill, catch them up and take them indoors, till the cold has passed away. The season is sufficiently advanced for you to be able to turn them out again, so soon as a cure has been effected. One teaspoonful of the mixture as under to two tablespoonfuls of water—this to form the whole of their drinkables till relief is given Ipecacuanha wine, oxymel of squills and glycerine in equal parts.

Quaker and Tovi Parrakeets.

A New Hand.—I am afraid I cannot tell you what the birds you saw at the Zoo were; there are so many that would fit in with your description. The Quaker Parrakeet is as large as a Pigeon, and has a long tail. It is of a pleasing green colour, with the whole of the head grey. A pleasing and easily kept species, though somewhat noisy, it thrives upon a seed mixture of Canary, millet, dari, wheat, hemp, and sunflower seed, a little plain biscuit, cuttlefish, and water for drinking and bathing. It is a native of South America. The Tovi Parrakeet is fully half as large again as the Budgerigar, and is a pleasing bird, which makes, as a rule, an ideal pet. Its description is roughly as follows: general body colouring grass green, lighter and yellower on the under surface; the head some of the wing and tail feathers and abdomen more or less bluish; there is a yellow wing bar and an orange spot on the chin; beak brownish flesh colour, legs and feet pale flesh colour. Sexes very much alike. Diet: Canary and millet, ripe fruit, plain biscuit, cuttlefish and water ad. lib. It is also a South American species. Both these birds are easy to keep in health, providing they get plenty of fresh air without draught.

Birds in Poor Plumage.

Anxious.—You do not describe the birds, but I should say your friend was right in calling them Spice birds. I should get a tin drinker, with only a small hole at the top for them to drink out of, or one of those glass drinkers with a projecting lip, which does not supply either sufficient space or quantity of water for bathing, and yet keeps up a constant supply for drinking, and I should add one teaspoonful of Parrish's chemical food to the drinking water for the next month. If you get one of the baths made to hang over the cage door, outside the cage, you will find the birds will soon avail themselves of it. You could run your birds into a small all-wire cage once a day and spray them with a fine spray or with diluted quassia solution, as I feel convinced they are infested with insects; or you can catch them and dust them with insect powder procurable from advertisers in our columns. I expect the cage is also infested with insects; put the birds into another cage, and well wash your present cage with quassia solution, thoroughly scouring all crevices, and after the birds have been well dusted with the insect powder, and the cage is thoroughly dry, return them to it. Do not remove the perches. As soon as you can obtain them free from frost, give them grass flowers, and foliage or sprays from non-poisonous plants and trees that are infested with green-fly.

An Unsatisfactory Parrot.

"Rhubon Maub."—I can hardly advise you in such a matter; it is necessary to know the full details of the transaction. You had better write the Editor, giving him all the details, and he will advise you on the matter. In the first instance you give, you certainly have no remedy, as you kept the bird nearly 12 months after closing the transaction, and when you did return it (if you are not accustomed to packing birds) its death was very possibly due to faulty packing. Personally, if I was not satisfied with the way I was treated in any transaction, I should try another source and see if I could not do better elsewhere. However, you must note this: that a change of home will often throw a bird off talking for weeks. With the Amazon, you say it shrieks a lot; well, this shrieking is usually the result of fear, so that it is evident the bird is not yet used to his new home, and is not likely to talk, etc., till it becomes accustomed to you. As to whether this is the case you alone can judge by the bird's demeanour. If you write the Editor *re* the matter, you had better read up the rules referring to same before doing so.

Aged Cockatiel.

Rosella.—I have a Cockatiel in my aviary at the present time, which has been there over eight years and was fully adult when I received it, so that it must be at least 10 years old. It has been out of doors the whole of the time, and is in the very finest condition. I should say the trouble with your bird is constitutional, and that it will never again be of any use for breeding; it certainly is not while it is in its present condition. Probably with the warmer weather it may improve. You could put it on a course of Parrish's Chemical Food, after making the drinking water just saline with Epsom salts for one day. The young male will be of no use for breeding purposes till it is in adult plumage. I am afraid there is only one course open to you, that is to either get another bird, and put your present bird somewhere else till it becomes strong again, or leave them together and await results; while you are so doing, your young bird will be reaching maturity, and ultimately be able to take the place of your present bird if this does not improve. On the other hand, if your young bird was only hatched last year, it certainly will not be ready for breeding till next year. Sorry to be so indefinite, but with a bird affected as yours is, it is very doubtful of its being of any further use save as a cage pet.

What Bird, etc.

A.R.G.—The bird in question is the common Indian Avadavat, and the variableness of its plumage is due to the species having a seasonal change of plumage; when in full dress—that is, breeding plumage—these delightful little birds vary from a coppery-red to a rich scarlet in hue; if the birds are weak when the time of changing plumage comes round, the change is often only partial, and, again, it is only speckled with the brighter hues. It is as yet too soon for the full colour to be donned. You had better cage the pair up separately till it has recovered its plumage as its companions are peeking it, which is often the case with those small ornamental Finches in captivity. Lightly colour its drinking water with Parrish's Chemical Food, and if there should be any sign of constipation, making the drinking water slightly saline will. Epsom salts for one day should give relief. As soon as you can

get them, a few rose-sprays which are infested with green-fly will assist matters greatly. I take it that there is a circular opening left at top of cage for ventilation, after you have covered up for the night. If not, arrange for such. If the bare parts are dry and hard, lightly anoint the parts with clean vaseline. There is nothing but isolation for such cases till the plumage is renewed.

Amazon with Occasional Fits.

Baby Amazon.—I do not think there is much the matter with your bird, or that the case is at all serious. Nevertheless, the fits want to be got rid of as soon as possible. I should not renew his mixture till he had eaten, at any rate, a portion of the other kinds; all sunflower seed is not wholesome. Otherwise your diet, etc., is very satisfactory, and the use of Dinneford's is quite correct, so that its voidings do not become watery loose. If there are any indications in advance of a fit coming on, it may be often warded off by a sedative—say, three grains of bromide of potassium dissolved in a little syrup once a day, but not more than three doses should be given. This should be ample to give relief. I should continue the Parrish's Chemical Food when not giving the magnesia, as this will help to keep up the bird's strength. Be careful to avoid unduly exciting the bird at present, and also avoid any sudden or loud noises in its vicinity as far as possible for a time.

An Overgrown Beak.

"**Polly, North Shields.**"—Yes, it is quite possible for the beak to become overgrown. The preventative is cotton reels and wood to chew up. Probably with your bird the overgrowth is due to its sore mouth making it disinclined to follow Parrot nature and "chaw" up all wood within reach. The remedy is to let a vet. see it, and trim it down for you, or some local fancier who is accustomed to such operations; but I recommend the vet., and he would, at the same time, prescribe for the sores—seeing the bird means so much in such cases. Apart from this, I can only advise you to continue with the treatment already given; it ought to have a teaspoonful of Dinneford's Magnesia twice a week till it has had three or four or even more doses, so that its voidings do not become watery loose. Surely you can give this by soaking one teaspoonful in a piece of bread, plain biscuit, or piece of Madeira cake, or anything else of an absorbent nature that the bird will eat—if the bread or biscuit is left to become almost dry after absorbing the magnesia, I think the bird will eat it readily enough. The sores must be got rid of or the bird must ultimately become worse; see the vet., or persevere with the treatment already advised, modified as above. Note other replies in this issue.

Brevities.

Grey Parrot out of Condition (C.W.H.G.).—So long as you prepare the soaked maize fresh daily the bird will do well enough on present diet. If you can handle the bird, foment the eyes with a warm decoction of poppy heads or camomile flowers; and I should advise one teaspoonful of Dinneford's Magnesia in the drinking water every third day. Between the doses of magnesia put the same quantity of Parrish's Chemical Food into the drinking water. Bathe or spray nostrils daily with diluted glyco-thymoline. Keep the bird warm, quiet, and guard carefully against draught; at the same time it must not be kept in a vitiated atmosphere. Hope there will soon be an improvement.

Pekin Robin with Swollen Eye (R. M. Young).—Deprive the bird of its bath for a few days; foment its eye with a warm decoction of poppyheads or camomile flowers, at the same time give every third day one teaspoonful of Dinneford's Magnesia in the drinking water. On other days well colour the drinking water with Parrish's Chemical Food. The following soft food is better for the Pekin. Equal parts auts' eggs, dried flies, ground puprе meal, and crumbled stale sponge cake, made just crumbly moist for use. It should also have ripe fruit, and a few mealworms (say half a dozen) or other insects daily. All the items mentioned for the soft food mixture can be procured from advertisers under "Foods." The bird should be kept out of draught; this is always necessary, even with the hardiest of birds, but especially with your bird at this juncture. If its excreta should become watery loose, you must, of course, cease giving the magnesia.

Budgerigars, etc., for Indoor Aviary ("Aigburth").—Your aviary has only space for one additional pair of larger Parrakeets for there to be any reasonable prospect of breeding, and for the capacity of your aviary the Rosellas are rather large, and I should advise you to get an adult pair of Cockatiels, which should settle down to breeding as soon as they have got accustomed to their owner and new quarters. You will require either large husks or nest-boxes with concave bottoms—consult our advert. columns. *Re* your box cage, two pairs might succeed, but your chances of success would be greater with only one pair. Put in the cage two husks and two nest boxes, the latter small square boxes about four or five inches, in fact a hollow tube, with a round hole about one inch diameter cut out for entrance, and a perch fixed in front of same. The following combinations would be the more likely to succeed, either White Javas and Zebra Finches or White Javas and Cutthroats; either would meet your case; personally, I should choose the former.

What Parrakeet? (B.J.).—You have a female or young male Alexandrine Parrakeet, which is one of the many species of Ring-necked Parrakeets, though not the species usually sold as such. The male has a scarlet collar round back of neck, which is joined by a similar collar which crosses the front of neck; he also has dull scarlet patches on each shoulder, and is much larger than the common Ring-neck. The female has the red shoulder patches, but lacks the ring of the male; this sexual distinction is common to the Ring-necks, which is a term covering several species and local races, many of which are so nearly alike that they cannot be properly identified save by either seeing the bird, or by a very full and detailed description of the whole plumage.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a report direct 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Canary (W. E. B.).—This bird was very anæmic, the liver being of the colour and consistence of putty. Under these conditions I think it quite possible that the thundery weather and the green food you mention might affect such a bird prejudicially. Some Parrish's Chemical Food in his drinking water might have kept him in better health.

CAGE BIRDS CHARTS.

No. 4; The Border Fancy Canary: Its Exhibition Points and Failings.

Notes on the Drawing on Page 381.

By H. Bennet (Kelso).

The charming Border Fancy Canary is the subject of CAGE BIRDS chart, No. 4, which shows its good points and its failings. It is very timely, in view of the enormous number of classes given for it at most of our well-known exhibitions during the past season. The illustrations so ably set before us will greatly benefit those taking up the Border as their hobby. In the various specimens depicted on this chart by our worthy artist and keen fancier, Mr. Norman, he seems to have grasped well all those small "bits of failings" which go far to keep out of the prize list otherwise good Borders. In the centre we have presented the well-known model, given out by the Border Fancy Canary Club, and which most of us try and breed to for our exhibition specimens. This model shows (as near as it is possible) what we wish to obtain; lucky the exhibitor who can put down a team of birds, either cloars, fouls, marks, or greens, which come up to our club model.

In looking at the centre drawing we can see at once that this is the "reigning Queen" among the others, possessing as it does a neatly-rounded head, short beak, nicely-tapered neck (not too long), a well-filled-in back, with short wings, well carried, and lying close on the tail (a good finishing point in wing carriage). This bird, too, possesses from the under mandible down the chest and towards the tip of the tail, that gradual rounding off which gives it a neat, full appearance and general look of symmetry and uniformity all over. Further, the graceful pose on the leg lends to the bird that jaunty and independent appearance which adds so much to the beauty of every really good Border. The bigger the class in which a first-class Border has to compete, as a rule the better it brings out the real merits of the specimen; if it is properly handled, it will convince you of its superiority the longer you work on it.

Turning to the top left-hand model, we see, "back too flat." We sometimes come across Borders of this description, especially in yellows. The causes leading to this are many. Breeding from birds too long-sided, also mating double Yellows, will incline to throw young ones too flat and long in back. Further, Yellows are apt to run longer in body and get a little flat in their second season. These birds should be carefully paired up to a very short-flighted one, possessing other good qualities.

"Too much chest." Here we have a model which often gets into the prize-money. This style is generally to be found in Buffs — especially birds bred from double Buffs. They possess a really first-class finish of feather and lustre, however, and although a wee bit chesty, are hard to set aside when quality of feather and other properties are there. Given this style in a Buff cock, I could recommend it as a really excellent bird to breed from.

"High on legs." We have here what could be termed a little dip into the Yorkshire blood, showing, as it does, more upright in body, too much bare thigh, and lacking the easy, graceful pose of the Border proper. In breeding for marked Borders we often find this type of bird appearing; still, in recent years there has been a great improvement in the type of the marked Border.

Another drawback with a Border is to be possessed of "too thick a neck." Let a Buff Border be ever so good in wing carriage and well-rounded in body, and with a pipe tail, yet if it does not possess a neck well modelled and moulded, to give its head the nice, free and easy motion which is the crowning point of style, then this specimen fails as regards being a "top-sawyer." Nevertheless, a bird of this sort is not to be thrown out, if he has other good qualities, for if you should happen to own a Yellow hen a trifle thin in the neck (and generally a good percentage of Yellow hens have this fault), then pair this bird to such a hen and you stand a good chance of hitting the happy medium.

Another failng in a Border is what is termed a "Fish tail." Our artist's illustration clearly shows what is not wanted as a Border's tail. The fault is caused in various ways. Perhaps the bird is bred from parents not carefully matched up in this respect. Further, many good specimens are seemingly perfect when sent off to the show, but when seen at the show either through excitement or being unsteady on the perch, they have a knack of opening their tail, or of getting the end of it twisted in the wires. Or again, it may be due to injury brought about by carelessness in the pulling of it at end of moulting season.

One of the chief failings of a good show Border is to have "wings carried loosely." A bird possessing this fault is not very often found amongst the exhibits at the leading shows; still, they do crop up occasionally. The chief cause (if natural to the bird) is weakness, and very in-bred ones throw a good percentage of this stamp. Also, it may be caused by careless pulling of the flight feathers during the moult (giving the shoulder of the bird too great a wrench when pulling). The bird, again, may be too high on the rump, where his wings meet, which may cause him to leave a space between his wings. This latter specimen, if healthy and of good type and quality, should be given a chance to pair up with a neat one such as we see on the next picture (in the left-hand corner). This is a really good specimen of a Border, bar the one point, that is, crossing its wings.

We more often come across "crossed wings" than any other failing at an exhibition. Many a highly-prized specimen when sent out for the first time, looks a model of perfection, and the lucky owner expects to do wonders with it. When he arrives at the show he gets a sad disappointment over his model, which has perhaps been awarded a pasteboard card instead of the highly prized 1st. Well, that bird has a lot to contend with from the time he leaves his master's aviary until the hall is cleared after the show. He is sent a long railway journey, perhaps with a few changes from one line to another, and if at all roughly handled en route it will upset him. As it is this bird's first experience of travelling, he takes it badly, and arrives in the show feeling out of sorts. His master is not there to unpack him, and, of course, he misses the hand which gives him his daily food and toilet. (Mind you, they know their keepers as well as any other birds). This being the first show hall this bird has visited, everything is strange to him. He cannot settle down to take his food the same as he does at home, but has to be climbing along the wires of the cage, to see who occupies the next compartment. If the gas in the hall is blazing full, it takes the bird off his food, never having been used to it. When judging time comes round, next morning, the poor birdie has had neither a good sleep nor a good feed. Excitement, climbing on wires, handling before judging, etc., all have a tendency to make a young bird cross his wings. In the case of a fancier being the happy possessor of a really promising young Border, the best plan for him to follow is to enter that specimen at a local show, to which he is going himself, so that he can look after his valuable specimen. Then it will have got a little more used to the bustle and handling which it is to receive at other shows, and which will not excite it when it has been out a few times. Crossed wings are also brought about by feeding a Border into too high a condition; they then show what is termed a "too finely drawn" appearance, and are apt to cross their wings at times. Further, over-long flight feathers are very easily crossed, as the specimen has not the body in proportion to carry the flights correctly.

The next picture shows us another good specimen with just a wee bit of fault: a "drooping tail." A Border is not improved with this fault, of course, as it gives him a "broken" appearance and spoils his jaunty look and graceful carriage. This is a stamp of Border which should, if kept, be carefully paired up to a straight-tailed one.

A Border which "Fails in position," is sadly handicapped in a good class, no matter how good in all other points it may be. It does not possess the correct set on legs, which enables it to grip the perch, and get the proper balance to show off its points.

In our last picture is portrayed an even-marked which "fails in type and feather." This is a failing oft read about in reports on these Borders. It seems to be a very difficult matter to get a really good even-marked specimen which combines the type and quality of a good clear. The one presented to our view here shows a flatness on head, nice neck, a narrowness across the shoulders, while from across the middle of the body it shows too thick and clumsy right to end of tail. Take the marks off this specimen, and it could not hold its own in a class of good clears. But taking it as it stands (as a marked bird), it will "pass in the dark." It fails in feather also, but that could be put right during another moult, with good sound food, and a supply of soft Tweed water.

Scale of Exhibition Points.

Drawn up by J. B. Evans and reprinted from "Cage Birds Annual."

Head and Neck: Small, round, and neat-looking; bill, fine; eyes, dark and bright; neck rather fine, and proportionate to head and body	10
Body: Back—well filled and nicely rounded, running in almost a straight line from the gentle rise over the shoulders to the point of tail; chest also nicely rounded, but neither heavy nor prominent, the line gradually tapering away to vent	10
Wings: Compact and carried close to the body, just meeting at the tips	10
Legs: Of medium length, showing little or no thigh, fine, and in harmony with the other points; feet corresponding	5
Tail: Close packed and narrow, being nicely rounded and filled in at the root	10
Colour: Rich, soft, and pure, as level in tint as possible throughout, but extreme depth or hardness, such as colour feeding gives, are objectionable in this breed, and are debarred ..	10
Plumage: Close, firm, and fine in quality, presenting a smooth, glossy, silky appearance, and free from frill or roughness	15
Position: Semi-erect, standing at about an angle of 45°	10
Carriage: Gay and jaunty, with a fine free poise of the head	10
Health: Condition and cleanliness shall have due weight	10
	100

Size not to exceed 5½ inches in length, measured in the usual way.

Canary (S. J.).—Bird too fat and liver enlarged and inflamed, in which the lungs became involved.

Grey Parrot (A. A. Dunbar).—Disease of liver and consequent malnutrition.

Siskin (R. H. Crompton).—Softening of liver, feverishness, inflammation of lungs.

GENERAL.

Answered by THE EDITOR.

Cutting Out Cage Doors (G. Large).—Your contrivance seems very ingenious. But where do you buy (or how do you make) the fitting for the brace, and also the knife (cutter)? Without these particulars we cannot see how readers would benefit by the publication of the sketch.

Quantity of Water (Ireland).—The quantity of water is two tablespoonfuls, as a rule. We are under the impression this is generally mentioned, and not as you put it, "nearly always overlooked." Thanks for drawing our attention to it.

N.B.B. and M.C. (G. S. Closs).—The secretaries of the National British Bird and Mule Club are Messrs. Plumbridge and Carr, 2, Broad-street Station, London, E.C.

A Strange Case (S. C. Rhodes).—It is certainly strange that the deaths of the young birds in the nest should seem to be due to the "black-beetles," though seeing that the latter swarm the place in the manner you describe, it is quite feasible that they are in some way responsible for your disasters. "Blackbeetles" cannot suck blood, but it is not impossible that they may have attacked the young birds in the nests; the large tropical cockroach, indeed, is known to occasionally attack human beings. The measure of iniquity common to the "blackbeetle" is not yet fully known.

Catching (W. L.).—You will find this matter dealt with in our correspondence columns this week. Watch subsequent issues also.

Club Notice (J. Kerr).—Sorry; your club notice came to hand a day too late to be inserted in last week's issue.

Cutting (J. McCulloch).—Thanks for your kindness.

Hall's Distemper (T.P.).—You ask us whether Hall's Distemper may safely be used in cleaning an aviary containing Parrakeets, which nibble the wood. We have written the manufacturers, Messrs. Sisson Bros., and Co., Ltd., of Hull, on the point, and this is their reply:—"Hall's Distemper can be used for painting out an aviary containing Parrakeets, and we should recommend a stone colour or a terracotta for the purpose. There are no injurious ingredients used in these colours that would be likely to affect the birds."

Suggestions (C. Mannington).—We thank you for the kindly interest displayed in our welfare. But as an old journalist yourself, you have surely found out that Englishmen will not be led in anything except politics. We often get our nose pulled as it is, for our well-intentioned (but ill-received) efforts in the direction you mention.

Will it Pay? (Grit).—There are many people who do make it pay, and as you appear to have plenty of the commodity indicated by your nom-de-plume, there seems no reason why you should not go and do likewise, especially seeing that you have had a lengthy experience.

Action (S.L.C.).—We shall be interested to hear the result.

A Food (Tom Gray).—If you will send stamped letter, we shall be pleased to address and post it to the gentleman named.

Rule Book (M. Jamieson).—We are much obliged to you.

Letter (J. De Ville).—Your letter has been duly forwarded.

Query (H. J. Stansell).—Our Foreign bird specialist, Mr Page, will answer your questions in next week's issue.

CORRESPONDENCE.

THE NORWICH PLAINHEAD CLUB.

SIR,—Having noticed a par with the above heading in "Club Notices" last week, signed O. Mitchell, sec., as it might tend to lead some of our members astray, and especially the committee, I beg to say that it is a new society formed in the Bradford district, and which has adopted our title. At present I have the honour of holding the position of secretary to the Norwich Plainhead Club.

J. RAYNES.

A CHAFFINCH SINGING PROBLEM.

SIR,—In answer to "Constant reader" in CAGE BIRDS of March 28th, asking if a "kiss-you-wear" counts in a Chaffinch handicap, my reply is, yes, of course it does. If being scored against, take no notice till you have sung the quarter, and then stick up for your rights. As long as the bird does a fair lead and finish and pronounces the R. at the end of the note, no matter what note it may be it is worth a chalk.

AN OLD FANCIER.

TWO EGGS IN ONE DAY.

SIR,—On April 3rd, I found a hen Canary very poorly. It was mated up, and expecting her to lay, I thought she was egg-bound and required assistance, which I gave. I anointed the vent with oil and gave some in beak. On April 4th I found two eggs in nest. The time when I observed her as being ill was from about 4 o'clock in afternoon of the 3rd to 9 o'clock a.m. of the 4th, being 17 hours. Has such an experience ever occurred with any Fancier living? This is what the Frenchman calls rightly a phenomene.

J.S.

SIR,—Being a breeder of Norwich Canaries and a constant reader of CAGE BIRDS, I should like to ask whether any of your readers have had the experience I had this week. On going through my room before dark, one of my hens looked very lumpy and very much like being egg-bound. So being anxious about same, I got up early next morning, but there was no egg. Thinking she might lay later, I left her for half an hour, and on looking in the nest, behold there were two eggs, the usual size of Canary eggs, but one dented as if one had been pressed into the other. This is no two-hen theory, as the cock paired up to her bred for me last year.

E. W. LUNT.

MORE TROUBLE IN IRELAND.

Special Meeting of the Yorkshire C.C.

SIR,—An extraordinary meeting of the Y.C.C. of Ireland was held in Douglas Hotel, Dublin, on 13th March, requisitioned under Rule 9 by Messrs. F. R. Fry, J. Huggard, W. H. Sheridan, J. Dowling, W. Wall, W. Camp, and T. Farrell. Fifteen members attended, and it was proposed that Mr. Bray, of Dalkey, act as chairman. Letters of apology for non-attendance were read from Mr. Kenny, Mr. Hawkins, Mr. Devins, and Mr. Wall. The meeting then went into Mr. Devitt's letter, which appeared in CAGE BIRDS, and after a conversation on it the Secretary read letters from Mr. Mulligan (Secretary, Sligo Association), Mr. McCollum (Secretary of Lurgan Association), Mr. Webster (Secretary of D.P.C.B. and P. Association), and Mr. McEneaney (Secretary of Dundalk Association), stating that the Secretary of the Y.C.C. of Ireland had not guaranteed any classes at their shows for non-feds. A letter was read from Mr. Trimble stating that the Secretary had guaranteed two classes for non-feds in Belfast show, but in these two classes Messrs. Sheridan and Fry did not nominate any cup birds. Mr. Devitt then offered an apology to the Secretary that he would withdraw the word "shows" from his letter and use the word "show," but as this would not meet the case, the Secretary would not accept it. A resolution was then proposed that Mr. Devitt withdraw his letter as contained in CAGE BIRDS of 7th March. Mr. Devitt then promised to write a letter to CAGE BIRDS, which would, he said, satisfy everyone present, and the meeting was accordingly adjourned to enable him to do so. Mr. Devitt having failed to carry out his promise, the adjourned meeting was called for Friday, April 3rd, when 14 members attended. Mr. Bray was again voted to the chair. A letter was read from Mr. Short, of Enniskillen, and the members declared the letter was beneath comment. A letter was also read from Mr. McQuade, of Enniskillen, with some suggestions, which were allowed to stand over for general meeting. A typewritten communication supposed to have come from Mr. Devitt, but which, however, was not signed by him, was put before the meeting. Considering the circumstances under which the communication was received the members could not accept it as bona-fide, and no action was taken in the matter. The following resolutions were then proposed and passed unanimously:—"Resolved that this club having had under consideration at our last meeting a letter which appeared in CAGE BIRDS, dated 7th March, signed by Mr. Devitt as chairman of the club, in which he made allegations against certain members, which we found to be erroneous, and having called upon Mr. Devitt to withdraw such letter, which he promised to do, but which promise he has failed to carry out, now deem it expedient to exonerate the persons from all blame in the matter referred to, and declare such allegations to be untrue and without foundation." "Resolved that the conduct of Mr. Devitt in writing the letter to CAGE BIRDS, of March 7th, be highly censured, and this meeting suspends Mr. Devitt as chairman from the Y.C.C. of Ireland for three months from this date, 3rd April, 1908." It was proposed and carried that Mr. Cloke be elected chairman *pro tem.* The Secretary was instructed to convey to Mr. Devitt the decisions of the meeting, and send a full report of same to CAGE BIRDS. The meeting then came to a close.

W. C. SHOLEDICE, hon. sec.

SIR,—The annual election of officers of the Y.C.C. of Ireland takes place shortly. Would you therefore kindly allow me to state, through the medium of CAGE BIRDS, that my connection with the club, as chairman, or ordinary member, entirely ceases after the general meeting about to be held to wind up the present club year. To our much esteemed President, Major W. J. Trotter, and Vice-Presidents, Messrs. Fortune, Rowe and Barclay and several members, I take leave, with a deep sense of gratitude and regard, and regret pressure of time prevents me corresponding with them individually.

RICHARD DEVITT.

A BLIND GOLDFINCH.

SIR,—Your readers may like to know that a Miss Alice Backhouse writes to a contemporary about a blind Goldfinch she has. Her interesting account reads:—"I have a Goldfinch that has been blind for the last two years, and her independence is wonderful. She lost first one eye, then the other; they just seemed to disappear. For a time she was dull and quiet, but has long since quite recovered her vivacity. She has a cage to herself, and is perfectly at home in it, lets herself down with the nicest precision to the dish where her hemp-seed is, and when returning to the perch almost seems to count with her bill (as she climbs up with her claws) the number of wires to the desired locality. She goes to roost as regularly as all the others in the neighbouring cages, and is astir again at the same time. Probably her acute hearing guides her in this.

WELL WISHER.

MULES AND HYBRIDS: WHAT IS THE DIFFERENCE?

SIR,—It appears quite obvious to me that the ancient aviculturist, on producing his first Hybrid (mark you, between Canary and Goldfinch or Linnet) was confronted with the difficulty of giving it a name. I can imagine him, whilst working at his looms, grappling with this enigma. In despair, he calls it a Mule. It is good business and philosophy—the rock-bottom of all argument—to quote a precedent. That useful Hybrid (a beast of burden) the Mule, appears to have furnished him with an inspiration; hence the name. Nevertheless the Canary-Goldfinch is a Hybrid. Had this cross been produced in latter days for the first time, it would undoubtedly have been called a Hybrid, and nothing else. How absurd it would be to call the cross between a lion and a tiger a "Mule." It is a fanciers' term pure and simple, and is very useful particularly in classification of shows. For my part I should be very sorry to see it done away with. Does Mr. J. H. Verrall mean that, in his estimation, Mules are barren, whilst Hybrids may have the power of reproduction? It is only a little while ago, it seems, that we saw the accepted Hybrid Bramblefinch-Chaffinch; now Mr. V. states this Hybrid to be fertile. Personally, I don't think it is, but I am open to conviction; so please, Mr. V., trot along for the sake of CAGE BIRDS' interested readers and give proofs, data, etc. I should also like to ask him on what grounds he believes the Canary to be a Hybrid? Seeing that both the wild and—shall I say?—cultivated variety will inter-breed and reproduce indefinitely, I require no further proof of the distinctiveness of this variety. If nature did not provide this check what a chaotic state the birdie world would be in! All that distinctiveness in habits, colouration, and structure characteristic of each variety would be confusion. But perhaps this is apart from the main issue; therefore I will conclude with just my idea on the subject—which is that all Mules are Hybrids, and that all Hybrids are not Mules. Quite an Irishism, is it not?

S. R. FULLER.

Do not waste time and money

by using the old-fashioned egg and bread crumbs, but send for a pound sample of . . .

"Woodland Bird Milk"

and its results will astonish you.

Large, strong, upstanding birds, as a rule, take the prizes, and you obtain these by using it, as previous users testify.

PRESTON ORNITHOLOGICAL SOCIETY. *October 18th*, 1907.

This is to certify that the members of the Preston Ornithological Society have this year during the breeding season, and time of moulting, used upwards of 100 lbs. of your Bird Milk (Woodland Brand) in the soft food of their cage birds, and feel more than satisfied that it is the most suitable ingredient to mix with their soft food. This year our birds are larger, stronger and possess more vigour than ever before.

Signed on behalf of members. W. Haworth, Chairman; W. Lewis, Vice-Chairman; J. P. Leeming, Treasurer; J. W. Cleminson, Hon. Sec.; J. T. Swarbrick, Assist. Hon. Sec.

Broughton, Preston. Dear Sirs, I have much pleasure in writing you that the birds I won with in the Yorkshire section at the Crystal Palace Show, 1908, were fed with bread colour feed, and your Woodland Bird Milk. I used no eggs in my bird room all last season.

I am of opinion that one box containing 1 lb. is equal to 60 eggs; and this is the opinion of my friends in the Fancy. C. Blackhurst, M.R.C.V.S.

Price 1/2 per lb., and postage.

Orders taken in strict rotation, so hurry up and be in time for this season; save yourselves pounds and get better results.

Specially Manufactured and Prepared by—

THE CREAMERY CO.,

GARSTANG, LANCASHIRE.

AGE AND COLOUR CHANGES OF THE BULLFINCH.

SIR,—It is often said that Bullfinches are somewhat short-lived in captivity, and I think that, generally speaking, this is true. But the other day in looking over a weekly journal I came across an account of a captive bird said to be 11 years old, and, moreover, one which had undergone a curious colour-change. Its owner is a Mr. John Boggust, and this is what he writes:—"I have a cock Bullfinch about eleven years old, and very tame. He has always had the run of the table at meal-times. About three years ago, after moulting, he became very dark, entirely losing his fine red breast and the white spot on his rump. His plumage was so altered that he looked more like a dirty Sparrow. After moulting last year he regained his original plumage and now has a fine red breast, etc. The only reason I can give for the change is that for years his cage was hung in a small greenhouse, but previous to and after the last moulting he has been placed out of doors and in the sunshine. I have known Bullfinches change colour, but they invariably died soon after. I may say he has always had a variety of seeds, including hempseed and plenty of Green food. I should be glad to know if anyone has had a like experience?"

G. H. MORTON.

OPEN NORWICH PLAINHEAD CLUB.

SIR—The first general meeting was held on April 4th, at the "Market Tavern," Bradford, Mr. D. Sunderland being voted to the chair Mr. D. Sunderland was unanimously elected chairman for the ensuing year, and Mr. O. Mitchell secretary and treasurer. The rules, standard, etc., were discussed and passed as read. It was decided to issue ballot papers to all members to vote on committee of management, two auditors, etc., the 20 members receiving the highest number of votes, to be elected committee, and the one receiving most votes to be chairman of committee. The title of the club is to be the "Open Norwich Plainhead Club," and the society caters for all varieties of Norwich Plainheads. "That the members be divided into two grades viz., Novice and Champion, the word 'Novice' meaning one who has not won more than three first prizes in open competition before the current season".—Carried. A full printed copy of rules, etc., will be forwarded to all members, as soon as ready. It was decided to leave it in the hands of the sub-committee pro tem, to approach several influential gentlemen to become president and vice-presidents. A vote of thanks was passed to all subscribers to the fund, for providing trophies (which already amounts to £3). A vote of thanks to chairman for presiding closed a very successful meeting. Membership total, up to the present, is 65. All intending members kindly apply to secretary, who will be pleased to forward full copy of rules, etc., and all possible information.

O. MITCHELL, Hon. Secretary.

Yorks.

BORDER FANCY CANARY CLUB AND ITS JUDGES.

SIR,—In answer to the somewhat wandering remarks of Mr. Lambie: firstly, he states that I am trying to evade his query as to whether fanciers outside the B.F.C.C. are capable of judging the Border Fancy Canary? I distinctly state that his remarks do not bear on the point at issue. I distinctly saw by his last that he had an axe to grind, and I decline to act as a grinding stone for him. If he has any grievance against the Border Fancy Club, let him attack it openly. If the heading had been "The Border Fancy Canary and its Judges," I should have answered him on this point, and, what is more, very straight, as my humble opinion is that no breeder of the variety is acting for its advancement if he does not pay the 2s. 6d. subscription and become a member (unless, as I have already said, they have a grievance towards the club). I once again say that I have never stated that only a few members are capable of judging the Border Fancy. If Mr. Lambie will take the trouble to count the judges acting in seasons past, he will find that they are a healthy few. What I stated in the letters he quotes are facts, and unless he can let your readers see wherein I have erred, there is no occasion for him to quote them word for word. When I am fighting for freedom (as I am on this question) I prefer to have other fanciers' ideas to criticise—not my own. To his last item, I would advise him to become a member at once, before the final selection of the new judges is completed and if he has the ability he may find himself very prominently.

J. PATTERSON.

ROLLER CANARIES AT THE PALACE SHOW.

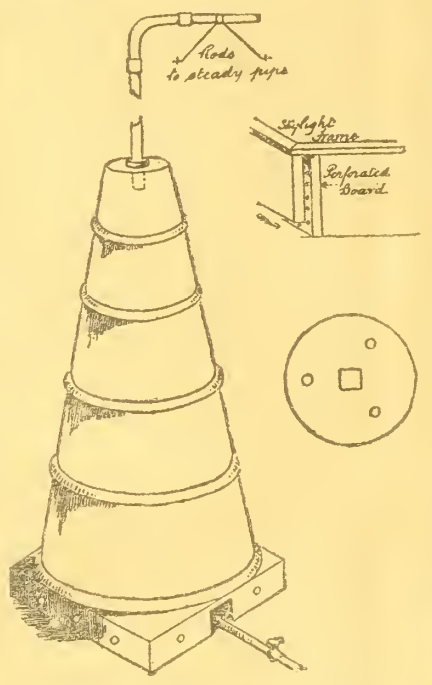
SIR,—I beg to inform your readers that the statements I have made under the above heading are absolutely correct, and it is very evident that Mr. Whittaker has not a copy of the letters he sent me, or else he would not be so foolish as to put in print what he imagines he has written. He won't believe that any member accepted his challenge, and says that I am bluffing. This is a slur on my honesty, and only a narrow-minded person would talk such nonsense. Now to prove that the challenge was accepted, I will give £5 to the funds of the club if it is not true, Mr. Whittaker to give £5 if it is true; and if he wants a side bet he can be obliged. Mr. Whittaker complains that I have taken extracts from his letters, which are false and misleading. A more bare-faced method of trying to get out of what he has written will be hard to find. I expect that his next move will be to say that he has not written the letters at all! He also says he has not backed out of the matches, and that it was impossible to pick a judge. Strange, that he should consider it so easy for me to find three judges, who were to have the birds three days each, yet when he is asked to pick one judge, he says it is impossible. I presume that he could have found one from his own district and have paid his expenses? But no; it did not suit his purpose. And the strange part of it is that the reply did not come till after the meeting at Manchester was over. He waited to hear what the verdict was about the bird. I am told by a member who was present, that it was the opinion of the meeting that if the bird in question ought to have been "the Palace winner, then there must have been a very poor lot of birds bred last year. Now we see his reason for saying: "We had better let the matter drop." I still say that he did alter the conditions, and having read the challenge again, I do not see anything stated about "if the two bird match was not taken up, the one bird match was off." In his letter to me, he mentions it twice. I also wrote twice to him saying that I only arranged the matches on condition that the loser paid the money to the funds of the club which he agreed to. It is no good his trying to get out of it by making false statements, and I advise him to speak the truth in future. He also states that I had to postpone three club meetings in succession, which is also untrue, as since the club has been formed there has only been one meeting adjourned; and if he looks at the rule-book he will find that the members in London number 23, and not 17 as stated by him. My record for the B.R.C.C. speaks for itself, and the other part of his statement I can afford to treat with the contempt it deserves. Mr. Whittakor gives his reply to my remarks on the Gluck birds, but as your readers do not know what those remarks were, I fail to see how they are going to make head or tail of it, and shall be pleased, Mr. Editor, if you will let my remarks that I sent to him appear. (Copy). "Now you say that Messrs. Roehl and Rettich having given undue preference to the Gluck birds, but you have forgotten one thing, these Gluck birds do the Gluck in addition to the other tours, therefore should have extra points; and if a member breeds other tours into the song of his birds, they would still get more points; and if two birds sing as near equal four tours each, the points would be equal, but, if one of these birds brings an extra tour, he is entitled to extra points, is he not?" I wish to ask the Roller fanciers who are following this discussion to place my remarks alongside Mr. Whittaker's reply in last week's issue, and see if there is anything surprising in the remarks. As far as I can see, anyone who has a little brains can tell what the answer is, and if they can find that I suggested that Mr. Whittaker had not brains enough, I shall be pleased if they will point it out to me. At the same time I must confess that I have come to the conclusion that there may be some truth in the remark he had made about himself. Now we come to the cause of the trouble, and I am very pleased to see that Mr. Whittaker admits he is a disappointed exhibitor. He states he had bred two young birds that answered all his expectations, and was quite sure that he had reached the height of his ambition, only to find that the birds time and again were put down below birds that were their inferiors. What a shock it must have been to him at the club show. Evidently the three judges did not entertain the same high opinion of the birds as he has formed himself; and it has been the same at the other shows. So according to him, all the judges are wrong, and he is right. What a pity to sell the birds; it makes one wonder why Mr. Whittaker says that as secretary I ought to remain neutral. Quite right; and I am as a rule. But I am not going to be insulted without saying something in return. Out of all my letters to him, he cannot point to one and say that he has not received fair play and justice. Members write to me and say that I have been shielding him. Now that he is a secretary, I hope he will remain neutral, and practice what he preaches. By doing so, we shall not have a repetition of the stormy scenes he has created at the different shows during the past two years.

J. W. NORRIS.

Hon. Sec., B.R.C.C.

THE HEATING OF A BIRD-ROOM.

SIR,—In reply to Mr. H. Tomsett's inquiry about my heating contrivance, I use a plant pot arrangement similar to the one described some years ago in your paper. My sketch shows how the pots are fitted. Nos. 1 and 2 are 12 in. plant pots, No. 3 is a 10 in., No. 4 a 9 in. and No. 5 an 8 in. The joints between the pots are first painted, then filled with plumber's putty. The joint between the flange on pipe and pot No. 5 is made in the same manner. The pipe, which is 1¼ in. in diameter, can then be easily taken off to



Mr. Wear's Heating Apparatus.

clean away the refuse which gathers around the holes in the pots and also in pipe. Two plates, with 3 in. holes in centre, are bolted over the centre hole in pot No. 1 to prevent this refuse dropping down on to the burner and thus extinguishing the flame. An illustration of these plates is also given. Insert putty between plates and pot. An old incandescent or small Bunsen burner can be used to supply the heat. The skylight window is held up six inches by three boards. Small holes are bored in the two side boards to supply the room with pure air. A board is screwed on each side of the outer frame of skylight window and these go down to within one inch of the roof. The air passes under these boards, then up and through the holes in ventilator board. I hope the inquirer will be able to understand this brief description and also the sketch.

E. WEAR.

THE SOUTHERN NORWICH PLAINHEAD CLUB SHOW CAGE.

SIR,—Reading CAGE BIRDS this week, I came across Mr. A. J. Marley's letter, wherein he states that the rule made by the Southern Norwich Plainhead Club is hard and fast. Now I will agree with him on a certain point, but on the others I can't, because I think we ought to have a standard cage both in size and colour (inside and out), and thus do away with all suspicion on the part of both exhibitor and judge. As now you can hardly go to a show and not hear some poor downhearted exhibitor who has been beaten say "He," meaning the exhibitor, "showed at so and so, under the same judge, who gave him first and special, and he can't very well alter his award this time." Then you say to him, "How do you think he knows that man's birds after having had some hundred or two pass through his hands since then?" "Yes, that may be," says he, "but you don't find hundreds of cages painted and got up like his, with wire fronts enamelled same colour as the inside; nor cages with new water tins, not painted, or if painted, black outside, and enamelled same colour inside as the inside of cage." Now we want all this put a stop to. Let us have a stated size and colour for the inside of cages, also perches and drinkers, and not only for one society, but for all. Now I can't understand why the Southern Norwich Plainhead Club cage is to differ from that of the Northern by half an inch in depth (5 inches to 4½ inches). The Northern is far and away the senior society, and the Norwich Plainhead show cage has been made to their standard; the majority of fanciers' cages therefore will be 5 inches deep. The change will entail another expense on working men, like myself, with not too much of that stuff that is required to meet these new ideas. Every fancier often has to buy a pot of enamel, and therefore would only have to change the colour of his cage to meet the requirements were the colour the only question. Then again, with regard to the appointment of a cagemaker to the society; this is not right. I have to agree with Mr. Marley on this point. I say give honour where it is due, and it is due to the man who can breed, moult, and stage his birds, and at the same time make his own cage to the necessary requirements and perfection. I might say I think this will do the Southern Norwich Club no good, this altering of the size of show cages, and having them off their appointed maker. I, myself, was about to send my subscription to become a member, but if I have to buy new cages, etc., to meet the society's requirements, I will be contented with the various societies and associations I already belong to. I think this is a very special question, and one that needs to be settled.

GEO. H. NEAL.

SIR,—I noticed in last week's issue of CAGE BIRDS that one of our members was against the idea of a universal pattern show cage. Now this is no new bye-law, as it was in rule-book from the start of the society and nearly every cage is so constructed. We have always adopted this plan, because it is far easier for judges officiating and we know that it is by far the best for our members' birds, as the cage shows the bird off to the best advantage. I know we are going a step further with the perches; that is for two reasons. One is that at present we have too many different shapes; the other is, that in the coming contest with the N.P. Club, we may be uniform in cages, as both clubs will then be using the same pattern of perch. So that any member can object to the judging in wrong cages. As a specialist club too, we should leave no room for marked, distinctive cages. This, I believe, is the entire wish of every judge and member. As to the cost of cages, I think we could not do better than wo say. If bought, they will be of the best material and good value; but if any working man has a hobby in making his cages, he has only to buy a club pattern, or read his rule for measurement, construct them as directed, get a sample perch, and paint inside with the right enamel. He can then use them with all confidence and pride that his birds may win in his own constructed cages. But to those who wish to buy, they have no need to worry as to getting the right kind, if they purchase the club's cage. If I remember right the worthy gentleman writing has cages constructed to our rules, or else I should have noticed the difference at the shows, for I generally look over our members' birds to see that they are not without food or water.

Hon. Sec. S.N.P.C. F. S. MATTHES.

Cage Birds Annual

— For 1908 —

The Standard Guide to the Fancy, IS

A MARVELLOUS SIXPENNYWORTH

—absolutely the best ever put before the Fancy.

LETTERS OF APPRECIATION REACH US BY EVERY POST.

A charming new cover, many beautiful illustrations of winning birds printed on art paper, a lovely coloured plate for frontispiece, a complete revision of all the popular features, and the addition of strikingly useful new features, mark this 1908 issue.

The articles, too, have never been excelled, and both Canary, Hybrid, British and Foreign bird keepers have been specially catered for. The needs of the beginner have likewise been given the fullest consideration.

BIRD CATCHING.

SIR,—In the correspondence columns, I notice a Mr. Kinch stating that Fieldfares are caught in hedges. As a birdcatcher, I have used the nets he speaks of (hedge nets) for seven or eight years, during winter, and I can quite corroborate what he says, as there are swarms of them in the hedges round here at night. They roost in high hedges or tall thorn bushes, or tall firs, but they are so wary that you get very few of them, as they are off in quick time as soon as they hear you beating down the hedge, and they usually fly out the top of the hedge. I have heard of some netters using a light, but I prefer to be without one. I have tried a light, but never made it a success. As to Chaffinches, a friend of mine, not two miles away, sometimes gets very little else, as they roost in particular districts much more than others. I don't catch half-a-dozen myself all winter, out of a large number of various kinds of birds. Another person, from about a mile and a half away, has sent me as many as fifteen young Magpies at once. I don't see a dozen in a year round home. I buy them off him to hand-rear. Goldfinches I have never caught in a hedge net, as they always roost in trees; at least that is my experience. I append a list of birds I have caught in winter (of course, we somtimes have a special run round for summer visitors). The catch is then very different. If we have a spare day, we use clap nets for Goldies (or spring nets). I have never found trap cages a success for Goldies. Another bird that is difficult to catch, if you don't go the right way about it, is the Hawfinch, as if they spot you one field away, they will soon make it two. So you can't get near to clap-net them, and trap cages are usually declined with thanks. Then you have to spring-net them, but your traps must be the right kind, or you will get on badly. There are a good many made with a square wooden frame, which a bird of ordinary intelligence will not step inside, unless absolutely hard up for food, and if they get in they escape at the sides; as they are corded, and if they get wet the cords strain, and then when they dry they slacken. The best are the round, or oval wire-traps. I have made both sorts, but the latter kinds are worth a dozen of the former. A friend of mine got one or two square traps for Hawfinch catching, and tried for two years, but couldn't get hold of any. I then made him a wire one, and he caught thirteen in two or three days, two the first afternoon he set it. Of course it was a place where they had plenty of feed, and were well on it (green peas). He used to look to see if there were any in every time he passed the place. I don't wish anyone to consider I am writing a cheap advertisement, so I prefer to be known by the under nom-de-plume. I seldom use bird lime except in exceptional cases, as it mauls the birds so, although it will hold almost any sized bird, if made right. In night netting I have caught Blackbirds, Thrushes, Fieldfares, Redwings, Bramblefinches, Bullfinches, Chaffinches, Greenfinches, Linnets, two Longtailed Tits, two Goldcrested Wrens, Nightingales, Yellowhammers, Willow Wrens, Robins, Hedge Accentors, Missel Thrushes, Tree Sparrows, House Sparrows. Like a man Mr. Kinch speaks of, I am having a shot at Hybrid breeding (Goldie and Bullie). The Goldie is hand-reared from the nest, and the Bullie is wild caught, but she will perch on my finger. Both birds are quite fearless. I have seen him feed the hen. If she refuses to accept his tit-bits, then he spreads his tail and wings, and waltzes her round the cage a few times, singing lustily during the performance. Any question any reader likes to ask me on catching wild birds, or where to find them, I will willingly answer through CAGE BIRDS.

CONSTANT READER.

Several Letters unavoidably held over.

A COLUMN FOR FANCIERS.

Appended are brief particulars of some of "Cage Birds" SPECIAL PUBLICATIONS for keepers and lovers of birds, with post free prices.

"THE HYGIENE OF BIRD-KEEPING." - 1/1
By W. Geo. Cr swell, M.D.
A most useful manual, thoroughly treating of modern hygiene in bird-keeping, by the most eminent living authority on the subject.

"SEPTIC FEVER OR CANARY PLAGUE." - 7d.
By R. H. Clarke, M. ., M.A.
A very useful booklet concerning this dread dis ase. It is the only one published, and should be found in every bird-lover's library. Dr. Clarke has given the subject very special study.

"THE NORWICH PLAINHEAD CANARY." 1½d.
By J. H. Payne.
A Lecture reprinted from Cage Birds, delivered by this leading judge and expert before the London and Provincial Ornithological Society, and pronounced by all experts to be a most valuable pamphlet concerning the breeding of the variety.

BREEDING CAGE LABELS, 1d. doz., 7 doz. 6d.
A boon to all breeders. Neatly printed in sets of twelve, on perforated gummed paper. They can be torn off, and affixed to the breeding cage in a moment and prevent all confusion. Useful alike to both small and large breeders of birds.

CARD BREEDING REGISTERS, 1d. each, 4 for 3d., 9 for 6d.
For hanging up in the birdroom. Printed on suitable stiff card, they are ruled to hold a complete record of the breeding results of six pairs of birds; invaluable for future reference, to ensure that knowledge of one's stock essential to accurate breeding.

LIVE BIRD LABELS, 24, 3d.; 50, 6d.; 100, 1/-.
For use when despatching live birds on journeys by rail or to the shows, etc. Printed in red ink and gummed on back. The simplest, neatest, and best on the market.

NOTE PAPER & POSTCARDS, 250 for 2/-; 500 for 2/6.
Until further notice we have decided to supply below cost price artistic Memorandum Forms and stout postcards, with name, address, twelve words of particulars, and blocks of any special variety of bird at half cost for cash. Carriage paid to any address in the U.K. Our latest style of note-head and postcard has been universally admired, and we will gladly send specimens to anyone enclosing stamped addressed envelope.

BLOCKS OF BIRDS, 1/6 each, 5 for 6/-, or 9 for 10/-.
For inserting in advertisements and for printing memorandums blocks of all kinds of birds at above low prices can be supplied. Larger blocks to order at cheapest possible rates. These dainty little blocks immensely enhance the appearance of note paper, postcards, and advertisements.

PICTURE POSTCARDS, 1d. each; set of six, 6d.
The most delightful and appropriate postcards of Canaries, British Birds, and Hybrids on the market, executed in colours by Mr. H. Norman. Ideal for Fanciers' correspondence. All represent exact and correct show types and have accompanying descriptions. State which bird or birds are required, or whether a mixed selection is preferred.
The latest set is entitled, "Pairs Matched for Breeding"; very educational art postcards. Price 3d. set of 8.

ORNAMENTAL PLATES, 1/- & 1/6 each.
The following coloured plates of Cage Birds can be obtained mounted on stiff card and gelatined. This process makes them washable and gives them the handsome appearance and all the durability of framed plates under glass:—Bullfinch, Blackbird and Robin, Border Fancy Canary, Bullfinch Hybrids, Cinnamon Canary, Cinnamon Marked Yorkshires, Foreign Finches, Goldfinch and Bullfinch, Hybrids (popular), Lancashire and Lizards, Mules (popular), Norwich (Yellow), Parrakeets, Yorkshires. Price 1s. each. Crests. Desirable Aliens (Foreign Birds), Larks and Pipits, Norwich (Blaze of Colour), Wagtails and Stonechat. Price 1s. 6d. each.
Also a padded plate of KINGFISHER having all the appearance of a hand painting executed on ivory. A most charming ornament for brackets, occasional tables, etc. Price 1s. All are post free.
Why spend large sums on decorating the house with other pictures?

FANCIERS' PRINTING.
Fanciers requiring business notepaper, postcards trade envelopes, etc., should write us for a quotation. We are now in a position to supply these at specially low rates combined with first-class work.

ILLUSTRATED IDEAS

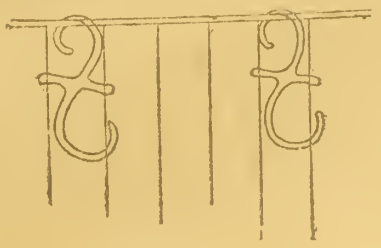
Under this heading we shall illustrate weekly some ideas useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 195.

A HOOK FOR HOLDING SHOW CAGES TO BREEDING CAGES.

Sent by R. Rhodes, 55, Ravensknowle Road, Moldgreen, Huddersfield.

I think the hook which is illustrated will be useful, if adopted, to some of your readers, in hanging Yorkshire show cages on to breeding cages, in the rearing of



A Cage Hanger.

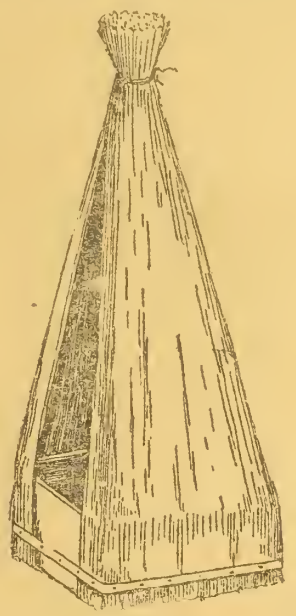
young when taken away from parents. The sketch shows how it fits on to the top bar of the breeding-cage. These hooks are easily made from ordinary cage-wire, and the side bits keep them from dropping inside the cage.—R. Rhodes.

No. 196.

AN ORIGINAL NEST BOX.

Sent by Miss M. Latham, Park Hill House, Stanhope Road Croydon.

I enclose a sketch of what I believe to be an original idea for a nest box, which I have found very useful for small foreign



A Novel Nest.

birds and Canaries in my outdoor aviary. It is a penny wooden nest box, with an opened bottle straw case tacked on to the sides, the tacks passing through a narrow strip of tin or zinc to keep the straw from tearing away. It is hung by a nail put through the string that ties the top. I put a small perch on the front of box with two wires. I hope this will be of use to the readers of Cage Birds.—M. Latham.

"AVIARIES, BIRD-ROOMS AND CAGES"

Is the title of

CAGE BIRDS' LATEST HANDBOOK.

It is written by that well-known fancier, Mr. H. Norman ("Cage Birds" Artist-in-Chief) who has illustrated it with a wealth of helpful drawings. It also contains 10 lovely full-page photographic plates.

It must be on every bird-lover's book-shelf

who desires to thoroughly understand the proper Building, Fitting and Management of Aviaries, Bird-rooms and Cages.

Price 2/3, post free, bound in cloth, gilt

The Novices Notebook.

This page will consist of topical hints, addressed chiefly to beginners, concerning every branch of the hobby of bird-keeping, and the notes will be contributed from time to time by various leading experts.

(Continued from page 355).

Breeding Without Feeders.

Another grave error which the novice on starting to breed fancy birds falls into is to dispense with foster parents for rearing the young, or "feeders," as they are popularly termed. Of course, this is practically always the outcome of ignorance. The breeder is, perhaps, an isolated fancier with few kindred souls around him, and little or no opportunity of acquiring first-class information from more advanced breeders. He may have kept and bred the common type of nondescript Canary, then take a more aggressive form of "fancy fever" and think he would like to come out as a breeder of fancy birds.

To obtain the birds to start with in these days of Fancy literature and large firms advertising regularly is the easiest part of the whole business. He obtains his stock and forthwith commences to breed with them on precisely similar lines to those which succeeded all right with his common mongrels. But a rude awakening soon comes to him. The lackadaisical and blundering way in which the fancy birds treat the most serious parts of their business, from egg-laying onwards, comes as a revelation to him after being accustomed to put his common birds together and leave them to do all the rest themselves. If they get beyond laying a brood of eggs properly, and without a hitch, they may not feel disposed to incubate them; should their instincts carry them safely through the incubation stage, they may refuse at an earlier or later stage to feed the young. Altogether, compared with the common type of birds, they seem to make a hash of the whole business.

Of course, the result is failure all along the line, and the breeder is at a loss to account for it. The whole secret of his non-success lies in the fact that his highly-bred fancy birds require a stock of "wet nurses," as it were, to take charge of the task of rearing their young. Doubtless this may appear too sweeping an assertion to some practical breeders, and it is certainly a fact that under some breeders' management even high-class exhibition birds have not lost so much of their natural instincts as to be incapable of being trusted with the care of their own young. They will, and do, rear their own young very tolerably without assistance from feeders, but as they are the exceptions rather than the rule amongst high-class stock, the only wise and business-like plan in writing for the good of the real novice is to ignore them altogether.

As a rule the tyro should take it for granted that when going in for such varieties as Crests, Scotch Fancies, and Belgians, it is a necessity to put up a number of pairs of feeders not less than the number of pairs of the fancy birds; and even with most other fancy varieties which are highly bred and valuable specimens, even if the variety as a whole do not require the aid of feeders, it is a wise precaution to put up a pair or two of reliable feeders to provide against any contingency which may arise.

Birds for Feeders.

Supposing the breeder has progressed so far as to have some vague notion of the necessity and office of feeders, he is by no means always clear what to use, or how to use them. I have known fanciers who were under the delusion that one only had to keep a spare common hen or two handy, and when the better class of birds failed to perform their duties, just pop the young brood in to one of the spare hens, who would forthwith play the part of the good Samaritan and begin to feed and rear the young; and I have known them under the impression that a hen mule would do for a feeder.

Both ideas are not only erroneous, but are just as fatal to success as not having a feeder at all available. It must be remembered that the instinct of a bird to feed its young follows, or should follow, in due course the excitement of breeding and incubatory fever, and that without these two preparatory phenomena the instinct to feed young is never present in a bird, save in some few exceptional and rare instances, which, again, must be ignored in such a connection as this.

It will thus be seen that the pair of feeders must have gone through the whole process of breeding themselves before their services can be relied upon, and as the domestic arrangements of the feeders must, preferably, be in a somewhat similar stage to those of the birds whose young they are adopting, it is advisable to prepare both classes of birds for breeding at the same time and start them together, so that both pairs may begin nesting at about the same time.

As already intimated the type of the feeders may be of the very commonest kind. As a rule, in the hands of a novice who has had but very little experience in breeding, the commoner the birds used the better will be their chance of success with them. On the other hand, if one has acquired some skill in breeding common stock, he may prefer to use a fairly good type of Norwich bird. These are almost as trustworthy, where properly managed, as the very commonest mongrels, and it is no unusual thing to come across successful breeders of a variety which usually require feeders who make the breeding of the Norwich Plainhead a side-branch as it were, of their hobby, solely because they are able to utilise the services of the Norwich for rearing the higher class stock when required. By working on these lines they are, as far as the breeding of the Norwich is concerned, killing two birds with one stone, as the saying goes, as they are able to breed a fairly good Norwich type of sufficient average merit to win at small shows, and yet always have a very good chance of having a reliable foster parent available at any time to take charge of a brood of crests or any other breed they may favour of the higher order of merit.

Late Breeders.

By the time this note appears there will be no further necessity for making any effort to prevent the stock from breeding. In most cases they will be duly mated up, and provided only they were in good health and proper breeding condition, will set to work at once. Certain exceptions have already been pointed out which will be all the better for not being mated at all, or at least not for some weeks to come. But in the case of healthy and fully-matured specimens that have not yet come into condition, some efforts may now be made to bring them on a little faster. Very often a little Epsom salts in the drinking water for a couple of days to "clear the works," and followed by a little extra mixed seed, a crumb of sponge cake slightly moistened with sherry wine every alternate day, and a leaf of dandelion daily will work wonders in the course of a week in bringing these backward birds up to concert pitch.

Foods for Rearing Young.

Doubtless a few notes on this important subject will be appreciated at this time. There are probably very few subjects upon which the principle of the well-worn adage: "many man, many minds," is seen with more effect than upon that of feeding and rearing young Canaries. Whilst in the early days of the Fancy there would seem to have been scarcely two ideas upon the question of the proper food for rearing the young, now-a-days, when the hobby is almost universally popular, this same question of food has become quite a thorny one, and instead of fanciers being of one mind, there are scores of fanciers to be met with daily holding just as many different views. There exist the egg and the no egg-from-conviction class, and a very great class who would like to dispense with egg-food on the score of expense, and to get rid of the trouble of preparing it keeping the supply fresh and sweet, each class having adherents holding scores of varying and dissimilar views.

The usual egg and bread crumb or powdered biscuit pabulum, which everyone is well acquainted with, may well be ignored here. It will doubtless continue to hold its own for a long time yet to come. The few notes may therefore refer to more or less efficient substitutes, and suggestions for those who care to dabble in

THE NOVICES' NOTEBOOK, continued.

experiments out of the beaten track. One of the most curious and inconsistent points about this search for a substitute for egg is the evident desire of so many searchers to fall back upon so-called egg-flake, which is simply a preserved form of egg-yolk. To any thinking mind this attitude must appear as ridiculous as objecting to pure fresh milk as an improper food for a baby, and suggesting the use of condensed milk as a wholesome substitute.

A Good Servant.

Still, the preserved form of egg is a most useful article, and when well mixed together with twice or three times its own weight of powdered biscuits, of any good plain brand, may be kept as a stock mixture which only requires slightly damping with a drop or two of water to make a food that is quite capable of rearing good sound healthy Canaries or Mules—provided only that they receive and assimilate enough of it. This is the real crux of the matter in respect to every kind of food. If the old birds do not care for it, they will not give it to their young—then, be it ever so good and wholesome, its value is absolutely nothing for its intended purpose. In making up this stock food, it is best to avoid highly-flavoured and fancy biscuits. The plainest are the most serviceable, as well as the cheapest, and well mixed broken biscuits, which may be bought very cheaply, are very good, as the less wholesome can easily be picked out and discarded before the rest are found.

Egg Cakes.

Then there is the method of making up a cake in which quite as large a proportion of eggs is used in the bulk as one would employ in the food prepared in the usual way. A couple of such recipes are here given, which have been used with success by many breeders. Recipe No 1 consists of a cake made in the ordinary way of domestic cakes, composed of two eggs, four ounces flour, half-ounce beef dripping, a teaspoonful of soft moist sugar (heaped), and a small pinch of carbonate of soda. Get the housewife to make these into a small cake, using a little milk, or buttermilk, to bring the dough to the proper consistency, if any moisture is required beside the eggs and dripping, and bake it in a moderately hot oven. It will require to be kept a day, or perhaps two days, before it will break up into nice moist crumbs. When it has reached this degree of staleness, all you have to do is to break off a piece the size required for use each day, and break it up into small crumbs. It may be slightly damped with a drop of water if necessary, but when it is in the proper condition, no additional moisture is required.

Recipe No. 2:—Three eggs, tablespoonful soft sugar (not heaped), ditto of honey, two heaped tablespoonfuls of finely ground peameal (sifted to remove skins), ditto of finely ground maize meal, a teacupful of flour, and a small pinch of carbonate of soda. Make all into a dough, using a little milk if required, as before, and bake in the ordinary way. It will be found best to add the sugar, and later the honey, mixed with a few drops of milk, to the eggs whilst beating them. Of course, in both cases, the whole of the egg is used, both yolk and white. The method of using is also the same in both cases.

Here then are two very useful and wholesome foods which anyone may employ, and at the same time know just what the birds are having, which may help them to discard fresh hard-boiled eggs altogether.

Bread and Milk.

As regards other kinds of rearing foods, what is there to object to in just plain bread and milk? This is given just as a suggestion, and for what it may be worth, but seeing that birds are as a rule most partial to it, and rapidly grow fat upon it if given at ordinary times to any appreciable extent, and further, that young birds may be readily brought up by hand on a diet consisting chiefly of bread and milk, it seems to possess every requirement contributing towards success. I give it now as a mere suggestion for the simple reason that I have not put it to a practical test in this direction. Some day I hope to submit the plan to such a test, and must confess to feeling rather confident about the result. If it appears to cause undue looseness in the bowels, a regular supply of cracked hemp as an accompaniment should remedy that.

Oatmeal Has its Faults.

Another food I have known suggested, but have not known to be actually used, is course oatmeal or rolled oats, mixed with egg in the place of powdered biscuit. From this method I should certainly expect little good result, for, although, as we all know, oats and the meal from them form an excellent and nourishing food, my experience of them is that their use as a food for birds confined in small cages should be strictly limited. They are much too heating for any except birds flying loose in a room or in a outdoor aviary during cold weather.

When given to caged birds even in comparatively small quantities regularly, their use is frequently followed by a peculiar condition of the bowels in which the droppings are very copious, white and chalky looking, and of a sticky viscid nature, which causes the birds some difficulty to part with them, and even when voided they still adhere to the feathers, and cause the feathers about the lower part of the abdomen and under tail coverts to become soiled and matted with filth. I have also noticed a very similar result to follow the addition of oatmeal to the food on which young birds were being fed by hand. Therefore, I should be very chary of adding it to any appreciable extent to the soft food for rearing valuable young birds.

The Hen to Decide.

As already intimated, the taste or idiosyncracies of the parents, and of the hen in particular, must be the real deciding factor—the casting vote, as it were—whether any food is used or not. If she is a whimsical feeder, there is absolutely no other course but to pander to her tastes if the young are to have any chance at all in life. A really good thorough-going feeding hen will bring up excellent young in all respects of health and stamina, upon hemp seed, soaked rape, and green food, whilst another perhaps with much better opportunities will fail to bring up a decent brood on any kind of food at all.

Cracked hemp and soaked or scalded rape should always be supplied regularly in separate vessels, when there are young to be fed. They are in themselves excellent foods for rearing fine young birds, and indeed, few young will be found to thrive so well as those which are being crammed well with these seeds, and they possess the additional advantage of being invariably greatly appreciated by the parents of both sexes.

(To be continued.)

Rare Birds in Kent.

Mr. Clifford Borrer in the "Field" notes an interesting occurrence of the Hen Harrier in Kent. This bird, which is rapidly verging on extinction in this country, gets its name from its alleged predatory visitations to the poultry yard. Along with the rest of its kind it has fallen under the ban of the gamekeeper, and the specimen seen by Mr. Bowrer was nailed to the kennel by a keeper, having been shot by him last winter. A second specimen was seen with it when alive, but this fortunately appears to have escaped.

The "Most Famous" Parrot.

In the London newspapers for October, 1802, the death of the most famous of British Parrots is (according to a weekly contemporary) thus announced: "A few days ago died in Half-Moon Street, Piccadilly, the celebrated Parrot of Colonel O'Kelly. This singular bird sang a number of songs in perfect time and tune. She could express her wants articulately, and give her orders in a manner nearly approaching to rationality. Her age was not known; it was, however, more than thirty years; for previously to that period Mr. O'Kelly bought her at Bristol for a hundred guineas. The Colonel was repeatedly offered five hundred guineas a year for the bird by persons who wished to make a public exhibition of her; but this, out of tenderness to the favourite, he constantly refused." This bird also appeared to answer rationally the questions put to it and on one occasion it certainly put to the blush a German quack named Dr. Bossy. Hearing at an open window the account an old woman (in collusion with the doctor) was giving from the quack's stage of all the wonderful cures he had effected in her case, the Parrot shrieked out, "Lying old ——!" to the confusion of the quack, but delight of the audience.

GOLDEN OPPORTUNITIES FOR SMALL INVESTORS.

The Safest and Most Profitable Investment in the World.

The thrifty habits of the Continental middle and working classes are proverbial, and it is scarcely surprising, therefore, to learn that something like £7,000,000 has been invested in Premium Bonds in Europe, mostly the savings of these classes. These securities undoubtedly offer most tempting inducements to the small investor, and it is pleasing to note that the British small investors are now beginning to appreciate their value.

There is no home security that offers to the man or woman of limited means the same golden opportunities of wealth, while capital and interest are at the same time fully secured. In the first place, the Premium Bond may be described as the foreign equivalent of our own Consols or Corporation Stock, they being Government and Municipal securities, many foreign States and cities employing this method of raising loans.

How it is Done.

The system is as follows. A foreign Corporation wishing to raise, let us say, a loan of £3,000,000 at three per cent., issues Premium Bonds to that amount. The interest on £3,000,000 would amount to £90,000 per annum, and the average British Corporation would distribute the whole of this amount pro rata among its shareholders. But they manage things differently abroad. A certain sum is deducted from the amount of the interest, and placed in a special fund, out of which cash bonuses are distributed periodically, these distributions generally taking place from four to six times a year.

When the holder of a Bond receives one of these cash awards—which, in some instances, amount to as much as £20,000, that Bond is automatically cancelled. In this way every year sees a reduction of the Corporation's indebtedness until the entire debt is paid. This is undoubtedly clever finance, for a British Corporation after paying its annual interest of £90,000, would still owe the original £3,000,000, whereas the Continental Corporation would have wiped most of it off. At the termination of the tenure of the loan, the Continental Corporation agrees to purchase all Bonds that have not received a bonus at a fixed par value, in some cases of as much as twice the original price of the Bond.

Fortunes Given Away.

To make this quite clear, let us take the case, say, of Panama Bonds, which, it must be remembered, have nothing to do with the success or failure of that enterprise. The cash bonuses attached to Panama Bonds are very large, there being annually distributed

3 cash premiums of £20,000 each.
3 cash premiums of £4,000 each
6 cash premiums of £400 each
6 cash premiums of £200 each
15 cash premiums of £80 each
150 cash premiums of £40 each

Thus a Bondholder may become the possessor of a fortune without incurring the slightest risk of losing his capital.

The chief credit of introducing these securities to the British investor belongs to the International Securities Corporation, Ltd., of 113, Westminster Palace Gardens, Victoria Street, Westminster, London, S.W., a firm that offers to its clients many additional inducements. Every purchaser of a Bond through this agency is automatically insured against accident and sickness, in the former case to the amount of £500 and £1 a week, and in the latter to £1 per week.

This firm also makes the purchase of Bonds by easy payments possible, and, in some cases, an investor can become a Bondholder by the payment of as little as 2s. 6d. per week. In every case the purchaser of a Bond becomes *immediately* entitled to participate in all allotments of cash bonuses just the same as if the Bond were fully paid up. Thus a man might have the good fortune to receive a bonus after only paying one or two small instalments.

A Generous Offer.

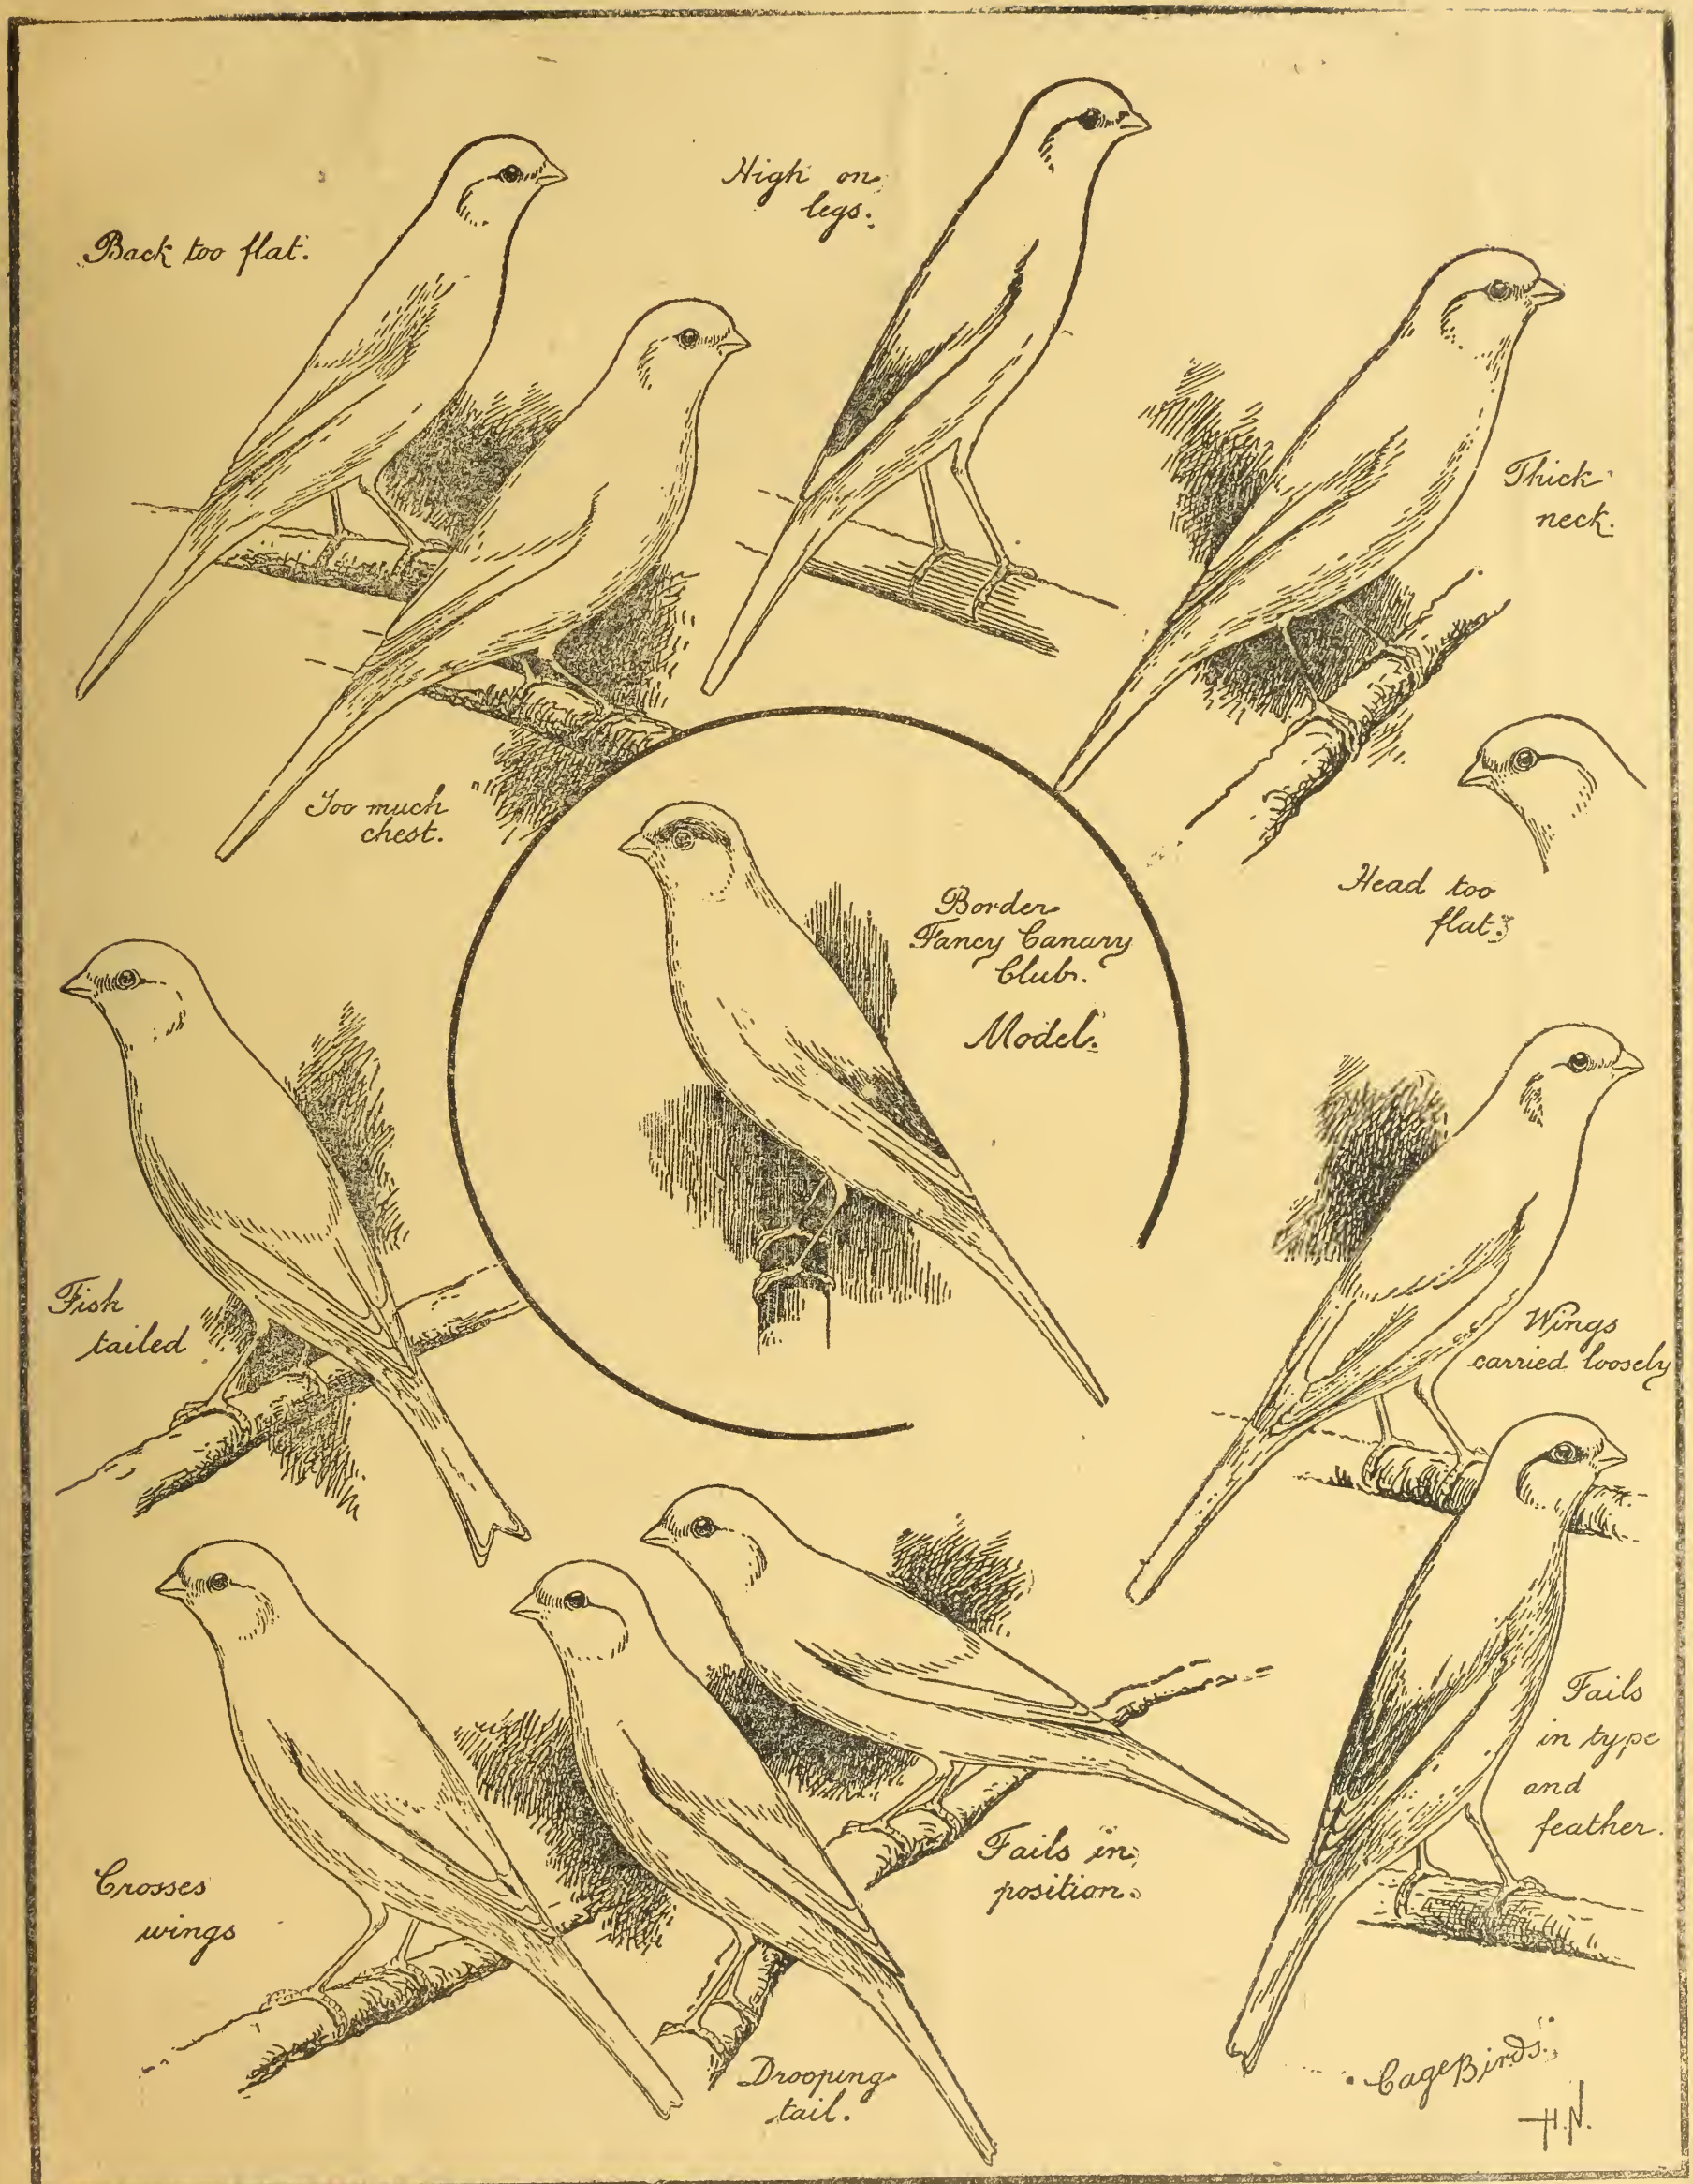
The whole system is lucidly and graphically explained in a beautifully produced volume issued by the International Securities Corporation, Ltd. Though originally published at one shilling—a sum which would scarcely cover the cost of production—the demand for these Bonds has now become so great that the proprietors have decided to offer a copy of this book free to every reader of "Cage Birds," until the present edition is exhausted.

This offer does not imply any obligation on the part of the recipient, it being made solely with the object of bringing to the notice of small capitalists a form of investment that is at once the safest and the most profitable in the world, a security that offers such apparent advantages that it is its own best advocate. The book itself literally teems with amazing revelations about the science of money making, and is not marred, as such works so often are, by a superfluity of technical and financial terms. It is a plain, unvarnished statement of facts that will appeal to all level-headed men and women. Some of the combinations of Bonds pointed out by the author open up almost illimitable opportunities of becoming rich, and that, too, without any risk of either capital or interest.

Book for the Thrifty.

The book is printed on superfine art paper, which does every justice to the beautiful photographs of famous people and places abroad, and makes it a veritable art album of the world. The Bonds of Paris, Brussels, Antwerp, Ghent, Verviers, of the Panama and Suez Canals, of the great land banks—the Credit Fonciers as they are called—and many others are here fully described, and a reproduction of a City of Paris Bond of the issue of 1865 is reproduced.

Every reader of "Cage Birds" who wishes to find a safe and profitable market for his spare cash or his savings should write to the Secretary, International Securities Corporation, Ltd., 113, Westminster Palace Gardens, Victoria Street, London, S.W., for a free copy of this book. The demand is already very great, and as the edition is limited, early application is advisable to guard against disappointment. All applications, it may be added in conclusion, will be dealt with strictly in the order of their arrival.



CAGE BIRDS CHARTS.

No. 4.—THE BORDER FANCY CANARY: ITS EXHIBITION POINTS AND FAILINGS.

(Notes on the Drawing, by Mr. H. Bennet (Kelso), will be found on page 376.)

THE BREEDING OF THE YORKSHIRE CANARY.

By Fred Allen.

Lecture delivered before the members and friends of the Tong and Dis. C.B.S. on March 24th.

Having been asked by your Secretary to give you a lecture on the breeding of Yorkshire Canaries, I promised to do so, in the hope that I might assist or instruct your members in any way. I may say here that although a young man, I am an old fancier. My father bred Canaries for 35 years, and I have never been without them. The past 12 seasons I have averaged over 100 each year, and the most hens I ever bred from has been 13.

Four seasons ago I bred 131 young off 12 hens (three nests each)—nearly 11 per hen—which I claim is a record. I may say that amongst them were the two best teams of young birds out that season, these winning nearly all the prizes possible. And this notwithstanding they were exhibited in the hotbed of the Fancy—Great Horton, Windhill, and Bradford. At old shows I had no less than five Cinnamon marked cocks, all 1st prize-winners at principal shows, and the noted Cinnamon marked stock bird, besides supplying some of the "shining lights" in the Fancy with their best birds. I can, therefore, fairly claim to know a little about what I am going to speak upon.

The Main Point.

My ideas and methods perhaps may not suit all of you, but they have done very well for me, and if any of you are successful in your own way of procedure, stick to it, and leave mine well alone.

The main point in all stock is to have them perfectly sound and healthy, and unless you have your breeding stock in such a condition it is simply a waste of time, money, and disappointment. Birds which have had a hard up-bringing are of no use to a successful breeder, as birds are made birds in the nest, and if neglected when young their faults can never be repaired. To breed certain show points into your stock, you must inbreed. Some fanciers seem to forget (or don't know) that to breed with bad feeders is to add to their stock of bad feeders.

Some Pairing Points.

Most of you are getting your birds ready for pairing up. I consider the last week in March quite early enough for this. In pairing or mating stock two specimens with same faults should not be paired together. Whatever one is weak in, let its partner be extra strong in. I have proved that the hens are responsible for type and quality. As a rule mine have followed the type and style of the hens. I like medium-sized hens, straight from head to tail, and no hollow in neck, as you get that too often ("breedy," as some term it). Cocks should be as long as you can get them, if typical, good, and vigorous.

Yorkshires can't be too long for me, providing they are typical and well feathered. They talk of birds being overlength, but as yet I have never seen what I call an exhibition specimen over 6¾in. in length. Anybody can breed nice little birds, but when fanciers come to me for stock, they all want "big uns" and not nice little ones.

Cages and Nests.

There are many ideas about breeding cages. I prefer single breeding cages. I should advise having the same size as mine, and made to fit a rack; then you can easily get them out to clean. Mine are 20in. long, 11in. back to front, and 18ins. deep. My nests are made of tin with plenty of small holes in them, and a good rim round the outside. In order to ensure the old birds a firm grip, I always place my nests on a level with the perch. When the youngsters are 10 or 11 days old the parent bird can stand on the perch to feed their broods.

Most hens make a poor attempt to build a nest, so I always line mine with carpet felt and give them moss and fine fibre to play with, or, if they like, to build with.

Having paired your birds, and providing they are in good, sound condition, you can expect eggs in from six to 12 days. I take mine out as laid till the evening when the third egg is laid, placing the three eggs back, and giving the nest a good dusting with insect powder. At the same time I always take the cocks away, as the hens sit and feed better when young are newly hatched or two or three days old.

A Word on Food.

I always give in the egg food some cod liver oil when feeding my birds up for breeding, and I am never troubled with sickly or egg-bound hens.

Some fanciers say give the hens nothing but plain Canary seed when sitting. I give mine a little mixed seed every day, as it helps them to get into good condition, and makes them more ready to feed their brood. When a hen has laid a clutch of eggs she is weakened a lot, and sitting close on her eggs for 14 days makes her weaker still, and we cannot expect her to do her duty if she is in a poor condition. That is my reason for giving mixed seed during incubation.

In feeding I give egg boiled hard, and bread crumbs, egg-cake and boiled rape, crushed hemp seed (as much as they care to eat), and Canary seed steeped in water 24 hours and then dried with a towel or cloth; if this is given at night they will feed splendidly on it. I feed mine as early as possible with egg food, then fresh dandelion, but not till the youngsters are five days old. When dandelion gets coarse I give lettuce.

Always let the young ones stay in the nest as long as they will; they will be larger and stronger. I find that when youngsters are seen out of nest second or third time, that is the best moment to take them away, as they learn to pick for themselves sooner. To leave them, say, another week, and then take them away, they will cry out before they will learn to pick or feed themselves.

Never give green food of any kind to youngsters after they leave the nest. If any youngsters seem mopish, give them a milk sop with a little treacle in it, and let it stop on till they eat it up. If it goes stale it will do them no harm.

THE FEEDING AND REARING OF YOUNG CANARIES.

By C. E. Brown.

Lecture before the Bristol C.B.S. on Mar. 1.

(*Concluded from page* 309)

How to Treat Inflammation.

If I get a bird with inflammation I immediately stop all soft food until the inflammation has abated. I give the bird one drop of the best castor oil. I give this with a medicine dropper, and then I am sure the bird only gets one drop. I then take the bird by the tail and flights, and, blowing up the feathers on the stomach, I just draw a feather that has been moistened with turpentine over the inflamed part. I fancy I hear some one say: "You do it; I certainly shall not." Well, gentlemen, everybody to his own fancy, as the old woman said when she kissed her cow. Of course, there is such a thing as doing a thing and overdoing it. But until I can find a better remedy I shall continue to do as I have stated.

Until the birds are well, I feed on plain Canary seed, and very little of that, and bread scalded in milk with a pinch of maw seed over it. I also give in the bird's drinking water a few drops of tincture of gentian. In fact I give my young birds a few drops of tincture of gentian twice a week in their drinking water from the age of five weeks right through the moult; I certainly think it acts as a great check to a lot of sickness among young birds.

I never give my young birds any green food after they leave the parents until they are well into the moult, and then only a very little—one small dandelion leaf per bird a day, as I find you must guard against diarrhœa. A capital thing to give old or young birds once now and then is a raw onion. I often cut up one for my birds, and have no trouble to get them to eat it. But every particle that is left in the evening should be removed. I also give them a small piece of mutton suet or fat bacon in the wires of their cages every week.

Diarrhœa Prescribed for.

I seldom get a young bird with this complaint; but if I do I immediately give lime water made weak, and twice or three times a week the following mixture: Tincture of rhubarb, essence of peppermint, and laudanum. My local chemist makes this up for me, and I give the birds in their water three or four drops well mixing it with the water.

I also give them milk sop, made as follows: I take a slice of stale bread and break it up into a jug or saucepan, and also a teaspoonful of skim milk. But if you do this, be sure the milk is skim (not new). Pour the milk into the jug and place it in a saucepan of boiling water over the fire. Or, if more convenient, put the bread and milk into a small saucepan and place over a steady fire until it is scalded. Do not let it boil (if you have a thermometer you cannot make a mistake, as, of course, 150 deg. is scalding heat). When it is cool strain off all the milk you can, add a little more seed and a little coarse oatmeal, and just enough castor sugar to sweeten it before giving it to the birds.

When the youngsters are going on nicely, I remove them into a large flight cage for a week or two, taking great care to hang some pieces of rough string or twine (hay or straw ties are a capital thing) along the wires of the cage for the birds to pull at. This oftentimes prevents them from plucking each other, for should they get their flight, or tail feathers, pulled out, they are done for, so far as showing in the unflighted classes is concerned, should there be a show specimen among them. And not only that, but the new feathers come much longer and so spoil the bird altogether for showing during that season.

Concluding Remarks.

Last year, as some of you are aware, I fitted up a separate room, which is about 14 feet square, for my youngsters, and after my birds had been in the flight cages a week or two, I transferred them to this room. I must admit they got rather wild, but at the same time the improvement in wing carriage was wonderful, and they were the healthiest lot of birds I ever had. As regards the wildness, I soon got over that difficulty with the specimens intended for show. Having plenty of show cages I placed the best birds in them two or three days a week, giving them a little niger as a treat, and they soon got as used to them as the rest.

When the young are between two and three weeks old, I hang on the bath for the old birds. When the young are five weeks old I give them a bath, into which I stir a couple drops of disinfectant fluid, which I find braces them up wonderfully.

During the breeding season I wash my room out twice a week and well cleanse with disinfectant fluid. Another very important item is the soft food pans, which should be well washed out every day and dried with a clean cloth before re-filling. I use the white earthenware food pans, which I find much better to clean than any other I have used. In conclusion, I wish to thank you all for your kind attention, and if any fancier present has heard anything to his benefit, I am amply repaid for my trouble.

Books every Bird Keeper and Breeder must have.

Canary Breeding for Beginners - - Post free, 7d.

By Claude St. John.

A practical, up-to-date guide to the cult of Canary breeding, designed specially for the use of the beginner in the hobby. It contains many helpful illustrations, and deals very fully, and in an easily-understandable manner, with the choice, sexing and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the details and difficulties likely to confront the breeder.

House's Canary Manual - - - - Post free, 1/2

This is a thorough and practical guide to the general management and breeding of Canaries, written by a well-known expert and judge. It contains chapters dealing fully with the breeding, etc., of every member of the Canary family, and an illustration of each bird, by the master Canary artist, Mr. H. Norman, reproduced in the finest art style. There are also exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge approached by no other book of its kind at the price.

Cage Birds 1908 Annual - - - - post free, 7d.

The Standard Guide to the Cage Bird Hobby is a title bestowed upon the ANNUAL years ago. And the 1908 edition merits it more than any previous volume. Revised and brought up-to-date from cover to cover, with a lovely coloured plate and many full-page art illustrations, and crammed with valuable articles and unique and helpful features, it is the finest value for money ever offered lovers of birds. Canary, British, Hybrid and Foreign bird enthusiasts alike will find it a Complete Guide to the Fancy.

The Stock Book (Our invaluable "Breeding Room Register.") - - - post free. 7d.

A well-known fancier has said of it:—"It makes bird-breeding easy." This book is one no breeder of birds can possibly afford to be without. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred—keep account of their strong and weak points. It contains both Pedigree, Breeding, Young Bird and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

My Methods of keeping Foreign Birds.

By DR. T. J. LEONHARDT, Ph.D.

The Advantages of a Large Aviary.

There are two topics with which I shall deal: firstly, where and how I keep my Foreign Birds, and secondly, some of the kinds I keep. I believe much in giving these lovely pets at least a part of their freedom back again, and therefore I let them fly loose in my conservatory. I have kept some in cages, but after having seen how they thrive and enjoy themselves in their "bigger cage," nobody could persuade me to cage them again.

One of my experiences is, therefore, that Foreign Birds develop themselves quite differently in a large aviary to what they do in a cage, even at its best. The perfect plumage (to which I shall refer later on) of some birds, into which they moult, cannot be got in a cage, Neither do *some* species ever attempt to sing in cages, as they do (and that to perfection) in a large aviary.

I should advise every lover of Foreign Birds to try and find a sheltered place and to build an outdoor aviary. Plans for such small buildings have been given over and over again in CAGE BIRDS, and their structure has been criticised and corrected by Mr. Page in answers to queries. The latest full description has been given in one of the recent numbers of CAGE BIRDS by Mr. Frank Finn, B.A., F.Z.S.

I will try to give an idea where I keep my Foreign Birds; it may, perhaps, be of use to some of my colleagues. My conservatory is 15ft. long, 10ft. wide, and 16ft. high, sloping to 9ft. on to the front. It is built against the southside of the house. Entering it from the French window of the drawing-room, you see that the front and right hand side walls have the under parts of wood and the upper parts of glass. The left hand side is a brick wall, and the roof is of painted glass. The glass door which leads out of the conservatory into a garden has a second door of wire netting, so that the inner glass door may at any time be opened without the birds being able to get out. As a matter of fact, the glass door is opened in the morning and shut after sunset. For cold winter days and hot summer nights I have a special ventilation above the glass door, as for various reasons I have to shut the latter.

There is a large old vine sending its branches all over the roof and giving the birds the natural perches of different sizes and cosy little places for nesting. In addition to these I have made about thirty snug little nesting boxes. I have also made two hanging perches which lead down to their tray.

About 6ft. from the floor I put two brackets in the wall on which rests a tray one and a half yards long and one foot wide. This tray can easily be removed for cleaning. I do it once a week; first I cover it with red sand, then I put some best bird grit on it in the shape of a T. To the right and left I put some white shells, and over the red sand I scatter egg shells. At one end of the tray I put shavings of cuttlefish, which I cut very thin with a knife, in a little glass trough. I have never heard of its being done before, but I can assure readers of CAGE BIRDS that the birds like it very much; indeed, some are so greedy for it that they are waiting impatiently till I am finished cutting it, and as soon as they hear the noise they come flying along. I have tamed Zebrafinches and Waxbills entirely with cuttlefish shavings. Of course I renew the latter every two days, and on the tray I add every day a bit of fresh grit and white shell.

The Supply of Food.

I have detailed the arrangement on the tray at this length because I find that it is a good thing to get birds accustomed not only to know where to look for their food, but where to look also for their grit. The food is given in a glass dish 1ft. long 3ins. wide, and 3ins. deep. It consists of white millet, Indian millet, Canary seed, and rice in husks (paddy rice). I do not mix the food, but arrange it separately in the glass dish.

Do not give them too much food or they will waste it; it will take you some time to find the amount. But when you have once found out how much will do, in the mornings they will be waiting for you and will get to appreciate you. Mind I am not advising by any means to stint them, only they must get to know that it is you who give them fresh food. Needless to say, in such a case one must be very punctual. I can safely say that I am never five minutes late.

In another glass dish I mix insectivorous food with crumbled biscuits, and procure as many live insects as I possibly can. Often I give them some egg food (hard boiled egg, crumbled biscuit, and sugar) on a shell, which they eat with delight. I give them green food every day, and doubtless the seed of grass in flower is their favourite food; the little Waxbills which I have perfectly tamed devour it while sitting on my hand.

The Supply of Water.

I give them water in a long, narrow glass trough to prevent them bathing in it. Their bathing is done in three wide glass dishes which stand on another shelf covered with American leather to prevent the wood from rotting. They indulge in the sport of bathing very often twice a day, and to see them sometimes four or five together in one bath, splashing away with about half a dozen others standing on the edge impatiently waiting to go in, or enjoying the shower bath, is a grand sight. Then to watch them drying and pluming themselves, looking so important and busy as if everything depended on how they stroked their little feathers, is most interesting; very often they gallantly help each other.

And here I cannot dwell sufficiently long or point out too strongly: never be too lazy to give the birds fresh water. In my opinion the supply of fresh water is much more important than one would imagine. They want fresh water at least twice a day. I renew the water regularly at 9 o'clock a.m., at 1 p.m., at 5 p.m. to let them have a fresh drink before they go to bed, and then last thing at night I change the water again, so that they may have nice water in the morning. They get up, not as early as the wild birds, but shortly after 5 a.m.

Some of my colleagues may smile at my "water theory," but I can assure them I know the value of it. I know myself that they will not do with much less care than I give them; but, on the other hand, I have them in perfect plumage and health, and I certainly attribute it to a large extent to the fresh water. Shall I point out that the water vessels have to be kept very clean? They must always smell sweet. I brush them weekly and rinse them every day. It is marvellous how one can train birds to observe regularity. My birds, for instance, know quite well when it is time for them to get fresh water. I am sure they wait for quenching their thirst, for as soon as they see the sparkling of the water they come along to get just one or two drinks.

The floor of the conservatory is well arranged. From the drawing-room to the outdoor is a piece of concrete covered with light linoleum (for obvious reasons) which is washed once a week. But the two sides are plain, dark soil, highly appreciated by the whole lot of birds. On this soil I scatter ants' eggs and dried flies. Once a week I turn the soil over, and then one can see a picture: they don't seem to care for seed or anything else, but down they come and pick it over as quickly as I turn it. Now and then I change the soil; I carry it out in the garden and provide a new supply, and then they have a great day trying to get every bit of good out of it; the Cordon Bleus and the Pintail Nonpariels especially spend any amount of time on the soil.

The Story of "Mannie."

Now for the kind of Foreign Birds I am keeping. I will say at the beginning that I have not yet gone in for very expensive birds. I wanted first to get, keep, and see how those birds which can be bought at very reasonable prices would thrive.

I begin with the well-known Zebrafinches, those plucky, inquisitive, and confiding little birds. The little Cockbird especially is most attractively clad in a grey coat, a snow white waistcoat lined with a chestnut border which is strown with white dots; when he opens his little bright red beak he utters a pretty song.

I bought "Mannie" quite accidentally. Two years ago I passed a bird shop, and such shops always having had for me a great attraction, I entered it, just to see what was in it. There I noticed in a fairly large cage about twenty foreign birds, and by looking closer I found that they were chasing in turn what seemed to me then a little ball of flesh. It was a poor Zebra Finch, the only one of its species in the cage. Drawing the attention of the dealer to the bird, I said: what a pity it was; he ought to kill it, as it had not ten feathers on its body. The man then told me that all its feathers had been plucked out by the others, but that it was a healthy bird. "Of course," I said, "otherwise it would have been dead long ago." As the old man did not seem to be inclined to kill it, I said, "Well, I'll buy it and let it die in peace. How much do you want for it?" "All right, sir, I'll let you have it for sixpence. I feel sorry for it myself." So I gave him the money and went home with my bird. I thought I had better leave it in that travelling box, and after having given it water and seed I put it on the window ledge, the wires against the glass, through which a beautiful sun was shining.

The following days I could put my hand in the cage to renew seed and water. The little bird never moved, but I could see that it had taken some food. Only the fourth day I put in some grit, as it had not had any in its old deathtrap.

By the way, novices especially ought to be careful in giving grit to newly bought birds; as a rule they have not had any for a long time, and they swallow it too greedily and often die. I only begin the second or third day to give them very fine sifted grit, and by and by get them on the ordinary grit.

(To be continued.)

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

The Substitute for Egg & Bread Crumbs,

SPRATT'S

COD LIVER OIL

Cage Bird Food.

Mr. R. A. BROWN, Sec. of Glasgow and West of Scotland Norwich, Mule, British and Foreign Bird Club, writes:—

"I have used your Cod Liver Oil Food and C. and C. B Food, totally supplanting the usual Egg Food, these last two seasons and have great faith in its nourishing properties.

"I have successfully reared over fifty young birds on it and find its easy manipulation and handiness a decided boon in the bird room."

Rears from the Nest Gives Stamina.

WILD BIRD LIFE.

The Spring Migration.

When considering the question of migration, it is fairly easy to find a satisfactory answer to the question — "Why do birds migrate?" particularly is this so when we are dealing with the autumn flitting of our Warblers and other summer birds. Our winter is cold and sunless, and insect food is not to be found in sufficient abundance to feed the thousands of tiny songsters and their young; so no doubt the want of food, or rather the search for food, is the chief factor in the autumn migration. It is not so clear why birds should fly from south to north in the spring months —why they should leave the sunny haunts of the south, where insect life is plentiful—to journey to a country where the cold east wind generally predominates until the month of June is well advanced. Of course one must not overlook the fact that these creatures are natives of this land, and that, in returning to us, they are in a sense, coming home. We have continued proof of the affection birds have for particular haunts; in fact, this love of one's native land and locality appears to be inbred in every living creature, to which man is not by any means an exception. Another reason may be that the hot, dry atmosphere of the south may not be altogether suitable to the rearing of fairly hardy species, and that if breeding was carried on in the tropics, these migrants as a race would soon degenerate. Tropical birds as a rule are less given to migration than our own resident birds. In the spring and autumn migration birds follow particular routes which for generations their forebears have followed before them. To trace out some of these roads is most interesting, and it is singular to note that the number of birds visiting us in the spring is far in excess of the numbers staying here to breed.

Hardy Gulls.

A photograph of the nest of the Herring Gull has been taken in the far North. The nest was actually scooped out of the snow some four inches deep, and contained eggs.

The Bloodthirsty Tit.

A trap baited for Sparrows unfortunately caught a little blue Tit. Immediately its companion (probably its mate for the breeding season) flew to the trap, and at once proceeded to peck a hole in the skull of its unfortunate friend, making a dainty meal of its brains.

The Ancients and Migration.

Aristotle, Pliny, and other ancient writers accounted for the disappearance of birds at stated seasons, by declaring that they retired to holes in the trees and rocks, and that some species actually hibernated at the bottom of the sea. Even so recently as the time of Gilbert White, the idea that Swallows and Martins retired for the winter, was believed in by many.

The Coming Cuckoo.

We are all longing to hear the voice of the Cuckoo, the most pleasing of feathered songsters, the "harbinger of Spring." And it can only be a short time now before we hear it. As the old rhyme says, "The Cuckoo comes in April etc;" but his stay is brief, and does not probably last more than about twelve weeks, which fact has been advanced by many as a reason for his parasitic habits. But there is no reason whatever why he should not stay longer. If the offspring can find sufficient and suitable food until the month of September, the old birds could easily remain long enough to rear their own young.

On Wild Fowling.

We understand an association has been formed to encourage Wild Fowling, or so we take it, although the objects of the society appear to be a little vague. Wild Fowling is just one of those sports in which one indulges alone, or with a single companion. It requires no encouraging, for nearly every possessor of a rusty old gun living along the shore or within touch of the marshes, is a born Wild Fowler, and it is these that shoot at sight any strange or beautiful bird daring to visit our shores. I must confess that Wild Fowl shooting has a charm of its own. One may go all day and get only a single specimen, and yet trudge home happy and contented. The fresh breeze from the saltings, the wash of the sea on the beach, and the ripple of the water round the old boat, together with the freedom of the venture, give a healthy pleasure to those fond of the open air. Even the sight of the birds one is unable to approach form pictures, which we treasure in the memory for years. This form of sport needs no protection or encouragement; it is the rare species of birds which generally drop to the inviting stretches of marshland and reed beds that require all the protection we can give.

BEGINNERS; You MUST read the ANNUAL.

Advertisements continued from page 370.

MAINLY CANARIES—Continued.

EXCHANGE real good Crested hen Canary for a pair field glasses, or sell 15/-.—Barton, 55, Lyndhurst-rd., Chichester.

BUFF 1907 York. cock, grand stock bird, 12/6; exchange exhibition British; give little cash.—Lewis, Hospital, Aughton, Ormskirk.

FIVE hens, one Yellow cock, Canaries, 15/-; two cock Bullfinches, 3/-; exchange gent's boots.—Warboise, Talbot-rd., Wellingboro'.

LARGE size stock pair Norwich Greens, reasonable; or exchange young toy Yorkshire dog.—Greengrass, 118, Alwyn-st., Liverpool.

GREEN crest-bred cock, good stock bird, 20/-; or exchange for gent's or boy's boots, or anything useful.—Smith, King-st., Ilkeston.

SIB.-BRED cock, 1907; exchange for housemoulted Siberian or two British Goldfinches, cocks.—Donald, 95, Rosemount-place, Aberdeen.

TWO St. Andrecasberg Roller cocks, full song, 21/-; or exchange for fowl, or offers.—Woolbridge, No. 18, Park-st., Wollescote, nr. Stourbridge.

WANTED young healthy cock Canary; exchange good pearl pocket knife and razor; good articles, not rubbish.—Gill, 2 in 2, Eldon-st., Sheffield.

GOOD pair of Canaries ready for breeding, cock in full song; exchange good silver watch, anything useful.—Bert Rice, Raunds, Wellingborough.

EXTRA large beautiful typo clear buff Norwich hen, good ticked yellow cock, 50/-; or exchange.—Davies, 12, Kingsley-rd., Greenbank, Bristol.

THREE hens and one cock Canaries for sale; good birds; or exchange lady's gold watch and cash to value.—G. Pennell, 3, Cross-rd., Wimbledon.

THREE hen Canaries, double breeding cage, cock Greenfinch, cock Yellowhammer; exchange two hen Budgerigars.—Dudley, 56, Occupation-st., Dudley.

TYPICAL yellow variegated Yorkshire cock, 8/6; or exchange yellow Norwich cock for stock to value.—T. Southam, Honeybourne, S.O., Worcestershire.

NORWICH clear Yellow cock, 1906, good stock bird, 12/6; exchange for 1907 Yellow Norwich hen; approval both ways.—Turner, 46, Wilson-st., Clitheroo.

GRAND Buff Norwich cock, 5/-; Yellow cock, slightly deformed beak, 4/6; both full song; exchange hens.—Bridgeford, 48, Newcomen-rd., Wellingborough.

PAIR Norwich, breeding condition, also double breeder, 32 by 18; exchange for trousers, 32 by 32, chest 38, shoes 7.—H. Hay, Green-lane, Ashton-on-Mersey, Manchester.

HOUSE-MOULTED Goldie cock, 7/6; Yorkshire cock, 10/-. large Norwich clear hen, or good Yellow Yorkshire hen; wanted exchange; must be good.—J. Fysh, Swaffham, Norfolk.

CLASSICAL Yorkshires, not rubbish (Bailey's strain), 15/-, 17/6, £1 pair; exchange scrap copper or brass, or anything useful.—M. Cooper, Taylor-st., Batley, Yorkshire. Stamp reply.

HIGH-CLASS Yorkshires or Norwich, matched pairs; nesting; approval both ways; I will exchange above for anything useful (gramophone preferred).—F. Heathcote, 55, Havelock-st., Leicester.

TWO pairs Seifert, one pair Hartz, one Norwich cock, two Hartz hens, in breeding condition, grand songsters, sell £2, or exchange for good black Pom. brood bitch.—Crockett, Fenton-st., Brierley-hill, Staffs.

VARIEGATED Crest cock, 1907, 7/6; green Crest cock, 1907, 10/-; variegated Crest cock, 1906, 15/-; hand-reared Bullfinches, Greenfinches, 2/6 each; offers, no live stock.—Maddocks, Cowley Manor-gardens, Cheltenham.

PAIR of oil paintings, by Chs. Dudley, £1; talking Magpie, wicker cage, 10/-; hand-fed housemoulted Thrush, full song, large cage, £1; another singing, and cage, 10/-; exchange Canaries.—Kay, Duke-st., Liverpool-rd., Manchester.

OWING to removal must part this week; Cinnamon cock, with clear hen, 10/6; also Lizard hen, 3/6; grand house-moulted cock Linnet, with Norwich hen, bred last year, 10/6; house-moulted cock Goldfinch, real beauty, with Norwich hen, 10/6; two steady cock Goldies, 4/- each; will take £2 the lot, or exchange to full value; offers sent first; stamp for reply.—W. Cooper, Tailor, Carisbrooke, Isle of Wight.

Miscellaneous
Sale or Exchange

PAIR gents' light boots, 9's, 6/6; pair ladies, 6's 5/6.—Burge, Whittington Moor.

SINGLE dome aviary cage; offers hen Canaries.—1, Rhodesia-villas, Hythe, Kent.

EXCHANGE Buff Orpington cock for clear Yellow Norwich cock.—8, Alberta-st., Newington.

TWENTY-FIVE coloured plates, clean; exchange Canaries.—Ayling, 222, Crownfield-rd., Stratford, E.

DOZEN German wicker cages, clean and sound, mostly new, 2/6.—S., 23, Newmarket-rd., Norwich.

EXCHANGE pair ivorine-handled carvers for two hen Canaries.—Joseph Royles, 260, Beet-st., Sheffield.

"WOODWORKER," 4 vols., instructive books—exchange, sell 10/-.—Allerton, Godwin-st., Birmingham.

WHAT offers in cock mules and hen Canary, for good greyhound bitch.—Corley, 70, Hagden-lane, Watford.

SMOOTH fox terrier bitch, five months, 5/-; exchange anything.—Reynolds, 82, Glenthorne-rd., New Southgate.

BARLOW'S Aviaries, Greenwich, Kent, exchanges your surplus live stock for other fancy you require; state wants.

VERY nice pin, horse carved in ivory, sell 12/6; or exchange; offers; deposit.—Prior, 118, James-st., Brighton.

GOOD ½-plate hand camera for sale, or exchange songsters; must be good.—Wright, Backwater-st., Earby, Yorks.

GENTLES for birds and fishing, 1/6 pint; exchange Canary and Bullfinch hens.—Fishburn, Silsden, Keighley.

GOAT, about nine months, exchange for Siskin, four Nannies, six weeks, for sale.—Bibly, Wheeler-rd., near Bath.

WHAT offers in birds for bob-tail puppy, seven weeks old; Canaries preferred.—Austin, 41, Victoria-st., Chadderton.

THREE-FEET antique oak table, sell 30/-; exchange pair of good Norwich.—C. Jackson, Church-st., Guisborough.

NORWICH hen, buff, 1907; offers; exchange good English dog.—Robertson, Tailor, St. Mary's-crescent, Portsmouth.

CAMERA tripods; exchange good cycle lamp, cyclometer, or offers.—Sherman, 8, All Soul's-avenue, Willesden.

EXCHANGE "Country Side," 48 Nos., 1 to 45, 48—49—50, for Norwich cock.—D., 11, Springfield-crescent Catford, S.E.

BOUND book on Modern Practical Farriery, cost 25/-, sell 12/-; or exchange offers.—Prior, 118, James-st., Brighton.

WHAT offers (Canaries preferred) for pair field glasses, sling case, sell 15/-; stamp.—Stirling, 25, Main-st., Alexandria.

EXCHANGE set of bowls for two good Norwich Buff hens 1907 birds; approval.—McCully, 169, Windleshaw-rd., St. Helens.

100 "CAGE BIRDS," 20 plates, National Encyclopædia, 13 volumes, what offes; Exchange.—Jno. Burge, Whittingtonmoor.

97 "CAGE BIRDS" with coloured plates. What offers in crest-breds. Approval.—Gibson, Station House, Bedwas, Mon.

FOUR-COMPARTMENT breeding cage, sliding partitions new 7/6; two single breeders 2/6 each.—Lloyd, Sydney-rd., Crewe.

EXCHANGE good pair hollow ground Krupp razors for two hens, Norwich or Yorkshire.—W. Street, Ann-st., Exmouth.

BLACK Retriever dog, 10 months, sell 15/-; or exchange anything; approval anywhere.—Miles, 25, Park-rd., Bargoed, Cardiff.

GOOD flemish buck, 7/6; or exchange for pair of good Norwich or Yorkshires.—R. Oldfield, Folly-rd., Wymondham, Norfolk.

CHIPPENDALE table, 12/6; new brass cage, 2/6; coal vase, 5/-; exchange Canaries—Smith, 249, London-road, South, Lowestoft.

EXCHANGE two vols. Cyclopædia of Engineering, cost 33/-, aviary or cage birds; offers.—Runalls, 103, Lancaster-rd., Southsea.

FOR sale, four exceptionally light well-made breeding cages, all complete, 2/6 each.—Arthur Rushton, Cowling, Keighley.

EXCHANGE hand camera, R.R. lens, magnifiers, Iso, accessories, Canaries or British.—Saunders, 46, Brightside-rd., Hither Green.

PAIR black Pekins, hen winner; exchange German Roller cock or Goldfinches; birds first.—Turner, 3a, Albert-rd., Oswestry.

EXCHANGE 14-egg incubator for pure Roller cock Canary, or sell cheap, cost 17/6.—Dolphin, Prospect-terrace, Brockwell, Chesterfield.

EDISON gem phonograph; 2 horns, 12 records; will exchange for Roller cocks; good songsters.—Forward, Victoria Bridge, Leeds.

WHAT offers for good clap-net, 5 by 2, poles, lines, pegs, everything complete.—Davies, Babell, Velindre, Henllan, Cardiganshire.

WANTED singing Canary; or what offers for three-quarter violin bow and case; exchange anything.—82, Southern-rd., Plaistow.

PRIZE-BRED Fancy Pigeons, all varieties, given in exchange for all other kinds of live stock.—Barlow's Aviaries, Greenwich, Kent.

SPLENDID three-lighted brass chandelier, ornamental; cost £4; exchange Canaries, or anything useful.—Fenton, 11, Chester-st., Leeds.

DATED 1770, ancient antique pewter teapot, perfect preservation, holds five gills, 20/-, worth £5; exchange.—Mann, Willington, Durham.

GREYHOUND bitch, second season, 2 sheets, one pair slips, approval; full particulars; apply—Bainbridge, 7, Fairbridge-st., Middlesbro'.

EXCHANGE pair razors in case, 10/6; oxidised watch, 6/6; timekeeper, for two Yorkshire hens.—Duckworth, Hammerton Yard, Burnley.

HAND mortising machine, all tools, good as new, cost £13; what offer in birds, or anything useful.—Peto, 26, Chaldon-rd., Fulham, London.

GENUINE silver English lever watch, good order; exchange pair Roller Schoolmaster, or offers.—Foster, 3, Lincoln-view, Lincoln-rd., Leeds.

EXCHANGE gents' dress suit, splendid condition, 36 in chest, for Norwich Canaries, or cock Linnets.—Munckton, Hambledon, Hants.

HANDSOME Scotch Collie bitch, eighteen months old, grand house or yard dog, 12/6; exchange Canaries, poultry.—10, South-rd., Wimbledon.

ELECTRIC tattooing outfit, 2 machines, designs, inks, exchange Canaries, cages, or anything. — T. Taylor, Street-lane, Smithy Houses, near Derby.

WHIPPET bitch, 13 months, very fast, 7/6; two patent leather collars, cob size, 9/6; birds, Yorkshire hens, poultry.—Wyat, 108, Pelham, Wimbledon.

BUFF Orpingtons; cockerel weighs 10 lbs., five pets, laying daily, cock direct, 30/-; cock cost this; or exchange.—Pearson, Greenwich Market.

PEDIGREE white Bull Terrier bitch, six months, 20/-; exchange camera, Canaries, Goldfinches, or anything.—Fancier, 15, Nashville-place, Hanwell.

WANTED, anything useful; exchange Partridge Wyandotte eggs, from grand pen, headed by cockerel, 1st Sudbury.—Dawson, Blyburgate, Beccles.

GENUINE old brass-faced grandfather clock, wants slight repairs, 27/6; exchange Canaries, boots, anything useful.—Westrope, Bumpstead, Haverhill.

WHAT offers in Yorkshires or cages for three-burner chandelier, with lustres, cost £5 10s.—Baylie, 7, T, Peabody-buildings, Stamford-st., Blackfriars.

WILL exchange four volumes Practical Grocer, new, cost 30/-, for crest-bred cock and two crested hens; approval.—Geo. Rowley, North-avenue, Leeke, Staffs.

MODEL steam engine, 30/-; three pairs Tipplers, 3/- pair; Brown Linnet Mule, good singer, 4/6; exchange Canaries.—Heslop, 18, Stephenson-st., Darlington.

EDISON phonograph, trumpet, reproducer, and 70 records, as new, cost £5; sell £2; part exchange Canaries.—Buffery, 32, Ferdinand-st., Camden Town, London.

GENT'S cycle, good as new, cost £7 10/- few months back; sell £3 10-, or half birds, half cash. Bargain; approval.—Harvey, 7, Neuchatel-rd., Catford, S.E.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has not been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1/-, 1/6 according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

1 lb. makes 90 nests. **2/6** per lb., **1/9** per ½lb., 1/- per ¼lb.
MORTEN DODGE,
Manufacturing Chemist, Strangeways, Manchester.

RINGS The Oldest Ring Maker in The World.
My 1908 improved rings are now ready, also my Pedigree Books. These rings are the finest ever put on a bird's leg. All the numbers are embossed, and not same as all other makes, stamped in; therefore cannot fill up with dirt; all edges are neatly rounded. They are not cheap flimsy rings that birds can nip to the leg and cause inflammation, as many a good bird has been lost through cheap rings. Prices as before, 6d. per dozen, 5/- per gross. Pedigree Books, 6d. each. Agents apply at once; enclose stamp for terms.
SAM DRAKE,
31, HALEY HILL, HALIFAX.

WHITE NEST PANS 2/9 dozen complete with wires.
FELT LININGS 10d. dozen.
LARGE NEST BAGS 9d. dozen.
CANARY EGGS 6d. dozen.

The Latest Invention
For the convenience of
CAGE BIRD AND POULTRY BREEDERS
is the
LITTLE WONDER
EGG & SOFT FOOD MINCER.

You can, by the use of this Article, mince 12 Hard Boiled Eggs in the same time as it would take to chop 1 with a knife or such like old-fashioned methods.

Every bit of the Egg when put through the mincer is universal in size, and when mixed with Biscuit or such like, makes a perfect food.

COX & SON, AIR-GUN PELLET MANUFACTURERS

Sandiford, Bird Specialist, and Judge, Preston, Lancs. Telephone 440.

MATTHEWS, LINNET KING.

Gentlemen, I have the largest stock of British birds in England, and shall be pleased to take visitors this Easter through my aviaries, which are, without a doubt, the largest in the World. I have over 500 British birds in stock, and I keep every variety; some handsome, large, well-pencilled Linnets, steady, 1/6 and 2/- each; a few special giants, for keen competition, 3/- each; bargains; also the finest stock ever seen. Ready for Mule breeding; large giants, nut-brown backs, blood-red breasts, in full song, steady, only 2/- and 2/6 each. Those intending Mule breeding should send at once for one of these. Special birds, a nice lot of Linnets, been trained under my Cheshire champions, 2/-; with beautiful singing cage, instructions, packet of seed, 3/- lot; a few mounted Linnets, ready for contest, 3/6 and 4/- each; Bramblefinches, real toppers, 1/- and 1/6; a few grand Twites, for showing, 1/6; Linnet and Canary, 4/6; Greenfinch and Canary, 3/6; Greenfinch bred Mules, 2/6; Twite and Redpoll, 2/6; Bramblefinch and Chaffinch, 2/-; large giant yellow Greenfinches, 1/- each; yellow hens, 6d. each; two grand giant common Buntings, 2/6 each; or any kind of British you require. All these special birds are in full song, steady, been caged since Christmas; not fresh-caught rubbish; postcard before birds. From Birdwell Cottage, Highthorn-rd., Rotherham, Yorkshire.—Sir,—Send me your Linnet Fanciers' Guide at once. The Linnet I got from you is a perfect gem both for singing and colour, and would take twice the amount I paid for it. You can always depend on my orders from now. Thanking you for your straightforward dealings.—From Mr. White to Matthews, Linnet King. All birds sent on seven days approval; cash or deposit; no waiting.—Matthews, Bird Specialist, 44, George-st., Hyde, Cheshire.

Aylsham Road Aviaries, NORWICH.

CATALOGUES POST FREE.

Awarded 9,000 Prizes—A World's Record.

J. C. BARNES,

149, Duncombe-st., Walkley, Sheffield. Having paired up, find I can spare the following choice specimens; Yellow cock, 15/-; Buff cocks, clears, 20/-, 10/-; variegated, 20/-; heavily-marked, grand for colour production, 20/-; ditto, 10/-; Buff hens, 15/-, 10/-; no odd Yellow hens. All are of grand colour, quality and type, guaranteed own breeding, and related to my cup winners, 1905, 1906 1907; approval; stamp reply; inspection cordially invited.

J. BERTIE,

cage bird judge, has one of the finest collections of Norwich in the Fancy, but at present has not much time to exhibit. But can supply sure winners and stock birds at very reasonable prices. Those short, stout, deep-chested ones, with tail and wings to match, good size, with grand head, and well filled in neck. The kind that do win under a judge that knows his business; stamp; approval with pleasure.—The Cottage, Steedman-avenue, Mapperley, Nottingham.

BARGAINS.

Having commenced breeding, have the following real good unflighted Norwich to clear immediately; chance seldom met with; from my champion strain; —(1) Grand clear Yellow cock, ticked Buff hen, 30/- per pair; (2) Buff clear cock, winner, fine Yellow hen, 35/- per pair; (3) Yellow cock, 1906, wonderful type, paired to grand Buff hen, 30/-; (4) 1907 grand Yellow cock, winner, 25/-; (5) another good quality and type Yellow, £1; (6) promising clear Yellow, winner, with another moult, 25/-; (7) smart Yellow cock, 1906, 12/6; (8) fine Buff cock, grand stock bird, £1; (9) clear Buff cock, 12/6; (10) variegated Buff cock, 12/6; (11) four grand Buff hens, 15/- each; (12) five Yellow hens, the sort to breed winners, £1 each; (13) three smaller, 15/- each. These birds will do the purchaser some good; are dirt cheap, but must be cleared quickly; blood tells. —A. E. Silk, Whitstable.

THE BEST SHOW

Some jealous people may doubt it, or wish to contradict it. But it is open for your inspection. A visit to my specially constructed bird room, built in the open country, will prove to the most sceptical person that I have by the far the best Show of Canaries ever seen in bird rooms. My Stock includes many winners at Leading Shows, every bird is full quality and the right type, and my prices are within the reach of all. Having over 1,500 birds to select from, I can offer you odd birds or properly matched pairs that will give you every satisfaction. Call and inspect my stock or let me send you birds, carriage paid on 7 days' approval at my risk. For quality and cheapness combined I stand alone.

Miss E. L. STOREY, BIRD SPECIALIST,

CROWLE, DONCASTER.

NO PUFF HERE, but PLAIN HONEST FACTS!

That we possess an unblemished reputation of half a century.
That we are on The Bazaar Reference Book.
That we sell to serve again.
That for quality and lowness of price our birds are unsurpassed.
That every bird is personally examined by us before despatch.
That all fanciers requiring reliable specimens at a low price should state their wants to us.

The following are a few bona-fide unsolicited expressions of satisfaction selected at random from hundreds received quite recently:—

QUITE SATISFACTORY.

Crystal Palace Road, London. April 9, 1908.—Dear Sirs,—Thanks for promptitude. The Canary arrived quite safely, and I think will be quite satisfactory. —Yours faithfully, A. Cripps.

MUCH PLEASED.

Bexhill Road, Eastbourne, April 10.—Mrs. Beck has received birds and cage safely to-day. She is much pleased with the birds, and thinks they are quite worth the money.

ALL GOOD BIRDS.

Mauchline, Ayrshire. March 24, 1908.—Dear Sirs,—The bird arrived safely this morning. I am highly pleased with it. I am better pleased with the birds I have got from you than from any other one. I find they are all good healthy birds. I will be sending for more later on.—John Howie.

NOTHING BUT SING.

Eastcote. March 22. Dear Sirs,—A line to tell you the Norwich songster gives me the greatest satisfaction; he does nothing but sing the whole time, and I shall have the greatest pleasure in recommending you wherever I am able. — Yours truly, E. Hill.

Note our present Prices:—

POSTAL AND TELEGRAPHIC ADDRESS:

WICKS BROS., NORWICH.

Rollers & Singing Canaries.

1907 BRED cock, 7/-; five clinking hens, 2/9 each, in the pink of condition.—5, Cargate-hill, Aldershot.

ROLLERS, breeding condition; cocks, 8/-, 10/-; call and choose for yourself.—Best, 5, Alma-place, Beckett-st., Leeds.

FOSTER'S Seifert strain of Roller Canaries; few matched pairs for sale.—Foster, 3, Lincoln-view, off Beckett-st., Leeds.

SURPLUS breeding stock; few good Seifert cocks and hens for sale; prices moderate.—Maddock, "The Knoll," Sutton-on-Sea, Lincolnshire.

HANDSOME Hartz Mountain Roller cock Canaries, yellow or variegated, grand songsters, 3/- each, two 5/6; if not satisfactory money returned.—Veasey, 134, Tredegar-rd., Bow.

BUY DIRECT OF

breeder and trainer. Finest strain of Rollers in the country; trained to perfection, 7/6, 10/-, 12/6, 15/- upwards; cash or deposit.—F. Cartwright, 15, Fairfield, Kidderminster. Established 1888.

AT THE FRONT

for many years; I have taken the lead with genuine pure-bred Roller Canaries, and I have at present in stock a very large collection of high-class birds. Genuine trained St. Andreasberg Roller cocks, in full song by day and artificial light, 8/6, 10/6, 12/6 each; pure Roller hens, 3/-, 3/6, 4/- each; matched breeding pairs, 10/6, 12/6; extra good loud free songsters, including Yorkshire and Norwich songsters, at 6/6, 7/6, 8/6 each; matched breeding pairs, 9/-, 10/6; neat travelling cages for birds, 3d. each extra; all Canaries carriage paid; on seven days' approval at my risk.—Miss E. L. Storey, Practical Bird Specialist, Crowle, Doncaster.

BOHEMIAN ROLLERS.

E. Power has only 400 pairs of Cutthroats, Combassous, Cordon Bleus, Waxbills (red and orange cheek), Grey and Green Singing Finches, Ribbon Finches, Bishops, Silverbills, Bronze-wings, etc., left; all arrived in the pink of condition. Price all at 2/- pair, or 9/- dozen, mixed. Also just received the first special consignment of No. 1 Bohemian Rollers, specially imported from Bohemo, Austria-Hungary. I defy any class of Canary to equal it in its mellow singing; each bird been trained by the flagolet and organ, with most melodious tones, and have 20 distinct changes of song. People that are fond of a good musical box, have their chance now to purchase a real Schoolmaster for rearing their young birds. Special cold room kept for these songsters. Note, these should be heard to be believed; there is no bluff about this. You will oblige by visiting my premises and hear them yourselves before purchasing elsewhere. Price 12/6 each. No. 1 Hartz Mountain Rollers, £2 10s. per stick of seven. These are not imitation No. 1's, as other dealers advertise them at less price than they can be imported from Germany. No. 2 Hartz cocks, £2 9s. per stick of seven. No. 3 Hartz cocks, £2 2s. per stick of seven. Genuine Hartz hens, guinea n dozen. 3,000 Canaries in stock; to be seen and heard, and no bluff.

One and Only Address—

91, SCLATER STREET, SHOREDITCH, E.

ESTABLISHED A CENTURY.

CHAMPION ROLLERS.

Notice.—I have a splendid consignment of those extremely musical St. Andreasberg Rollers; these are splendid day and gaslight songsters; they are delightful, with their deep bass rolls, hollow rolls, sweet silvery trills, water bubble runs, piccolo trills, bell, sharp and gong notes, etc.; these are splendid quality, and are certain to please you; all on 6 days' approval, on receipt of P.O., or you can deposit the amount with the Editor, 8/6, 10/6, 12/6, 15/6, hens to match 3/-, 3/6, 4/-, inspection invited. — William Shaw and Son, 97, Essex-road, Islington, London, N.

HARTZ MOUNTAIN

Roller cock Canaries, direct from Hartz, beautiful birds, only 3/9 each; 21/- a stick. Try one.—Varney, Stratford.—"The Elms, 13, Whitehouse Loan, Edinburgh. — Hummell arrived safely, and sings lovely; it is a pretty bird, and gives satisfaction. — N. Turnbull." — Birds arrived —are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am very well pleased with such value.—J. Broom." 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison." Send all orders to Varney, Stratford, London.

HUMMEL ROLLERS.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 6s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London.

COMMON SENSE

will tell you that unless my Rollers were all that I claim for them I could not go on advertising them, nor be able to publish such a lot of unsolicited testimonials week after week as I do. If you have been previously disappointed with Rollers kindly give me a trial. I care not how hard a man is to please. I guarantee to give him fullest satisfaction or refund every penny of his money. My Rollers have repeatedly been tested side by side with others costing double and treble the price from elsewhere, and never yet have I been told that mine came out second best. I hold an enormous stock of the genuine Leipzig Rollers, in full song day and gaslight, with long hollow and double rolls, sweet silvery trills, waterbubble runs, soft roulades, bell, harp and flute notes, etc., etc., and guaranteed entirely free from Titlark or any other objectionable notes, price 8/6 each; special Schoolmasters, 10/- and 12/6 each; hens of same strain 3/6 each. I also have a grand lot of pure Seifert strain contest Rollers, in full song day and gaslight, and all ready for immediate breeding. These Seifert birds excel in the deep bass and hollow bell rolls, etc., and their song can be likened to a cascade of everflowing, rippling melody, price 15/-, 17/6, and 21/- each. Seifert hens of same strain, 4/6 each. Kindly note that birds sold by me as "Seifert" strain are fully guaranteed to be the real thing—not Seifert in name only—and have been purchased from some of Germany's most eminent breeders, such as "Dinklemann," "Ohlert," "Lamm," "Meyer," and others who have won scores of contests in Germany; and documentary evidence as proof can be produced any time. All are sent on full week's trial entirely at my risk, either on receipt of cash or deposit with CAGE BIRDS, and unless fullest satisfaction is given, money refunded in full. Few more letters given below. "13, Carlisle-st., Dublin, April 1st.—Sir,—Please send Seifert contest bird. I was well pleased with Bandmaster from you short time ago.—Yours, T. Cooper." "46, Shelley-rd., Boscombe, April 2nd.—Sir,—Bird arrived safe, and am well pleased with same.—Yours, C. Tompkins." "Alexandra-rd., Abertillery, April 3rd.—Sir,—Received Leipzig Roller in pink of condition. I consider him a gem; his song is excellent, and I think it is wonderful to be able to obtain such grand trained birds.—Yours, William Small." "Ballymena, Ireland, April 3rd.—Sir,—Roller arrived safe, and I am especially well pleased with him.—Yours, D. Kirkwood." "Holly-rd., Bromsgrove, April 4th.—Sir,—Roller arrived safe. He is a beautiful singer, and I am sure a good one. Thanking you for your kindness and straightforward dealing.—Yours, J. Gossage." "544, Garden-terrace, Leadgate, Co. Durham, April 6th.—Sir,—I am well pleased with Roller. He has been singing splendidly every day since he arrived, and seems to get better every day. Thanking you very much for your straightforward dealing.—Yours, J. Anderson." "1, Fairfield-cottages, Peasdown, St. John's, nr. Bath, April 6th.—Sir,—Bandmaster arrived safe Friday night, and singing grand at 5 a.m. on Saturday morning. I shall want two more shortly.—Yours, A. Stock." "Upper Grove, Sellack, Ross, April 6th.—Sir,—Please send following. The Bandmaster I had is a beauty.—Yours, G. Preece." "Rose Cottage, Gt. Barlow.—Sir,—I am highly satisfied with Roller I purchased from you, and should be pleased if you will forward another variegated Bandmaster.—Yours, J. Holmes." "9, Birley-st., Kirkham, near Preston.—Sir,—The two Leipzig Rollers arrived safe, and I am quite satisfied with them.—Yours, S. Camp." "6, Long-lane, Dublin.—Sir,—I am pleased with Roller, which arrived safe. I think it only right that you should know that I tested him side by side with other Rollers that cost three times the price, and he is by far a better bird than any of them. He started singing within ten minutes of arrival. You certainly deserve to be better known.—Yours, M. Hopkins." All above letters are guaranteed entirely unsolicited from people who, apart from business transactions, are entire strangers to me. See last week's CAGE BIRDS for more similar letters, and then ask yourself who is the most likely man to give you highest value and fullest satisfaction. Remember, all sent on full week's trial at my risk; cash or deposit system, and money fully refunded if every satisfaction not given. I import direct, and by saving all middle profits am enabled to sell at such low prices. Plenty now in stock, but as this is the last consignment of the season, and demand abnormal, early application is advisable to avoid disappointment.

W. GORE, DIRECT IMPORTER,

131, GOOCH STREET, BIRMINGHAM.

REAL ST. ANDREASBERG ROLLERS (Seifert Strain), and PURE HARTZ ROLLERS.

Direct importer. The finest Seifert strain from Germany, with pure Nightingale, Woodlark, Titlark, Waterbubble, and bell notes; marvellous songsters; 7/6, 8/6, 10/6, 12/ each; on approval. J. SANDIFORD, CANARY BREEDER,
Established 1879. PRESTON, LANCS.

THE NOTED PARAGON YORKSHIRES

Having won the much-coveted £21 Yorkshire Challenge Cup, 1908, for the fourth time, is ample proof that the "Paragon Strain" is what the name implies, viz., the best of its kind the world can produce. I am the only exhibitor that ever won this valuable trophy outright, namely in 1903-4-5. I did not compete the two following years to allow others to come to the front. In 1906 I secured the Cinnamon-marked Trophy, and in 1907 I won the "Amalgamated Yorkshires," 25 guinea Challenge Trophy. In two successive years at the Crystal Palace my birds were awarded 13 firsts, and other prizes, including about 20 cups, medals, and specials, such a record has never been equalled by any other firm or fancier of the present day. The above are incontrovertible facts, and are not wild, exaggerated statements of advertising bluff and bounce to catch the inexperienced fancier. My birds come to the front year by year with the same regularity as one day follows another, thus proving beyond question that pedigree breeding is the royal road to success, as blood is bound to tell. I have bred and sold more noted winners during my career than any other firm. One client alone who had all his birds from me, won in his first season 63 specials and prizes. Further comment would be superfluous. I have for disposal some of the best that money can buy for length, style, position, and quality they cannot be excelled. Cocks, hens, or matched pairs to breed the best, prices reasonable; three days' approval; stamped address for particulars.

W. H. SHACKLETON,
South Bank House, WIBSEY, BRADFORD.

IF
YOU
WANT A
CANARY

Buy of me. I will send you any bird on my list and you can keep it for A WEEK ON TRIAL and you may deposit cash with Editor of "Cage Birds" if it is exactly what you wanted. Nothing could be fairer. I believe in honest dealing and I believe in giving Maximum Value for money. You can have my Bird Price List for the asking, or my Illustrated Catalogue for 2 stamps to cover postage.

GRAND VALUE IN

Typical Yorkshires, Flainhead Norwich, Crested and Crestbred Norwich, Pure Lancashires, Lizards, Hartz Mountain Rollers, Scotch Fancies, Goldfinch and Linnet Mules, Cage Moulted Finches and Linnets and Muling Hens.

Kindly state wants. Satisfaction guaranteed.

I have received thousands of flattering Testimonials, but I have not the time at my disposal to copy same for newspaper adverts., and prefer to give customers the benefit of the expense that a few columns of testimonials would cost to insert.

Large Descriptive Bird Price List Free on application,

E. TAYLOR,

Bird Specialist

3 & 7, THORNTON RD., BRADFORD.

(Only Address in Bradford.)

ESPORTAZIONE PESCI & RETTILI, Bologna (Italy).

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.
PARROT AVIARIES, MORECAMBE.

CLUB REPORTS.

KILSYTH F.A.

President Hardie occupied the chair at the monthly meeting on April 4. Consideration was given to the cage bird classification, when it was agreed to restrict some of the Canary classes, which for two years have filled badly, and to extend the British bird classification. Several judges were suggested, and the Secretary was instructed to ascertain terms.—A. D. DUNCAN, Hon. Sec.

QUEEN'S PARK AND DIS. C.B.A.

At the last meeting, before a good muster of members, Mr. F. Easterling read a paper on "Is it Bird Fever?" His paper was much appreciated, and contained some very useful hints, which should prove very beneficial to all who were present. It was keenly followed by a string of questions that drew forth some useful information. A henrty vote of thanks to Mr. Easterling for his very instructive paper, and a suitable reply closed the meeting.—J. C. BIRCH.

HAMILTON (CADZOW OAKS) O.S.

The annual general meeting was held in the Royal Hotel, Hamilton, on April 4, the Vice-President in the chair. The balance-sheet was gone over, and showed a satisfactory surplus. The office benrers elected were: President, Mr. W. Haddow; Vice-President Mr. D. Johnston; treasurer, Sergt. E. J. Smith; secretary, Staff-Qr.-Mr.-Sergt. A. Cant, A.P.C., 59, Bayestreet, Hamilton; auditors, Messrs. R. Gadsden and W. Brownlie. The date of our next annual show was fixed for November 28 to avoid clashing with other local fixtures. During the meeting a discussion took place on two specials promised by a certain donor, but which had not been forthcoming. No reply having been received from the donor to several communications sent him on the subject, the meeting agreed to pay these specials. A communication on the subject has been addressed to Mr. Bennet (Kelso), one of the winners. The other winner, who was present at the meeting, declined to accept his special from the society, and withdrew his claim. This being all the business, the meeting was closed with a hearty vote of thanks to the Chairman.—A. CANT, Sec.

SOWERBY BRIDGE & DIST. C.B.S.

On April 11, at the Bull's Head Hotel, Mr. R. Halliday gave a lecture on "The Pairing and Rearing of Yorkshire Canaries." He was accompanied by his old friend and Fancier, Mr. Whatmough. There was an excellent meeting, and everyone thoroughly enjoyed Mr. Halliday's interesting and instructive lecture. He answered many questions, and his able paper doubtless proved of great assistance to many of the young Fanciers. A vote of thanks was accorded to Mr. Halliday, to which he suitably replied. Three new members joined the Society, and this brought to a close a pleasant evening. Fanciers round this district are invited to join us.—A. E. MORTON, Hon. Sec.

CAMBRIDGE C.B.S.

The members held an enjoyable smoking concert on April 1st., at the Forester, Burleigh-street. Mr. A. E. Brooks presided, and there was a good turn out of members and friends. During an interval Mr. F. Doggett exhibited a number of excellent photographs of Carl Hagenbeck's famous menagerie at Stellingen, Hamburg, the largest in the world, and they proved highly interesting to the company present. The musical programme was sustained by:—Messrs. A. Butler, Dean, Catling, H. Cousins, T. S. Moore, J. Clark, R. Witt, G. F. Pryor, H. W. Wilkin, B. Worboys, J. Bilton, W. Baker, and Mr. A. Whale made an efficient pianist.—T. S. MOORE, Hon. Sec.

BRADFORD CITY O.S.

A good number of members turned up at the Flying Dutchman to hear Mr. C. Whiting deliver a lecture on the "Breeding and Moulting of the Yorkshire Canary." He spoke, he said, as a breeder of 25 years' standing. Dealing first in getting stock birds, and how careful one should be in doing so, the lecturer said it meant nearly everything to a breeder. He preferred a cock 7 in. long, and a hen 6½ in., as he found these gave the best results. He also believed in gaining the confidence of birds, playing and talking to them. He then described the method of feeding during incubation, and the feeding of the young. On moulting and colour-feeding, he said that this was the most critical time in a bird's life. He advised fanciers to buy the best of everything, and try and get that rich colour that fanciers loved to see. He also gave a few hints on washing, and told us his method of doing it. This brought the lecture to a close. Many questions were asked, and were answered to the satisfaction of all. Many of the members gave freely of their knowledge for and against inbreeding. A vote of thanks to the lecturer brought a most instructive and enjoyable evening to a close. —A. G.

NATIONAL BRITISH B. AND M.C.

A committee meeting was held at headquarters, 25, High Holborn, on March 16. Present, Mr. Fulljames (in the chair), Messrs. Lott, Vale, Weston, Galloway, Best, Dobson, Maxwell, Trower, Cooper, Silver, Cook, Wyse, Hathaway, Robson, Plumbridge, and Carr. Letters were read from Mrs. Soames, Miss Hopwood, Messrs. Nicholls, Arrighi, Cunningham, Robinson, P. Walsh, Crabb, Goodall, Galloway, Frostick, Collins, etc. Proposed by Mr. Weston, seconded by Mr. Vale, that Messrs. Cooper and Allen Silver be asked to check the voting papers sent in on the bird list. Only three birds were added, viz., Crested Tit, Golden Oriole, and Hoopoe, the remainder had a majority against (see list already published). The question of the club show-cage was next brought up for discussion. A good number of cages were sent from Messrs. Dewer, Galloway, Cullen, Walsh, Watson, Sandiford, Newley, and Hathaway, but none met with the approval of the committee, many being the ordinary box-shape, and several had too much bow front. After an hour and a half's discussion, it was proposed by Mr. Trower, seconded by Mr. Silver, that a sub-committee of five be formed, viz., Messrs. Robson, Vale, Weston, Fulljames, and Loft, to draw up a cage they considered most suitable, and report to the committee. The following new members were elected:—Messrs. A. Coffey, 69, Victoria-street, Liverpool; C. Cutting, 47, Bedford-road, Clapham; H. B. Withers, 249, High-street, Watford; and R. A. Newley, 24, Stockwell Green, S.W. A hearty vote of thanks to the chairman concluded the meeting.—PLUMBRIDGE AND CARR, Hon. Secs.

STOCKPORT B.F.A.

Lecture by Mr. F. W. Nelson.

There was a good attendance of members at the Boar's Head Hotel, Stockport, to hear the recent lecture. Very little time was lost in the introduc- Norwich Pairs Matched for Breeding." Mr. T. E. Dickenson presided, and after the usual business was done, he called upon Mr. Nelson to give his lecture. Very little time was lost in the introduction. Mr. Nelson brought four pairs of birds to give the members a better grasp of what he hoped would prove a useful discussion. The lecturer commenced by taking the Norwich first, and with pair No. 1 (which he described as a good-sized Buff cock, rare head and neck, nice quality, sound colour, rather long-sided, paired to a Yellow hen, short and typical, good head and neck, fine feather, clean cut, good colour, and a very good hen), he described that this pair should breed something very good. He also impressed upon the members not to lose sight of colour, and for that purpose he had brought pair No. 2—a Yellow cock heavily marked, rather long sided, but a good stock bird, paired to a nice Buff hen, good quality, sound in colour, short on leg, and very typical. As colour is one of the chief points in Norwich, the lecturer laid great stress upon it, as without colour Norwich were at a disadvantage on the show bench. Having done justice to the Norwich Fanciers, he took up pair No. 3, Yorkshires, viz., a Buff cock stock bird, over length, good long flight, well up on leg, inclined to frill, and rather snaky in head, paired to a Yellow hen, typical; in fact, the lecturer described her as a show bird, except in length; she was a bit short, but had rare quality, good legs, clean cut away, nice head, and was an upstanding bird, with feather like boxwood. Mr. Nelson dwelt at length upon this pair, urging the Yorkshire Fanciers in particular to note the good and the bad points, and they would see that where one failed it was counterbalanced in the other. Next was pair No. 4—a clear buff, a pink-eyed cock, rather short in length and leg, and also a bit stout-looking, paired to a Cinnamon Yellow hen, bred double Yellow of extra good length and leg, but rather flat in cheek; she had a very good back and tail. This hen Mr. Nelson expects to breed something good, as she has a good pedigree, and he advised the members to look well to the pedigree of their birds. Having finished his description of the birds, he set himself to answer questions.—Mr. Hill: What is the lecturer's opinion of double Yellow and double Buff?—He would double Buff to shorten feather, but it would cause the feather to come thicker. Double yellow would cause the feather to come thin and scanty, but with a Yorkshire he would keep the best bird bred off double yellow to use for second cross purposes.—Mr. Dickenson: What would you expect from a pair of heavily-marked Norwich?—He would get very good colour, and possibly greens.—Mr. Hill: How would you get rid of flat-headed birds?—Try to breed it out by pairing to birds that are extra good in roundness of head.—Mr. Oldham said he appreciated the lecture very much, especially the recommendation of the lecturer in regard to knowing the pedigree of the birds.—Mr. Massey also approved of the general remarks of the lecturer. He was very pleased with pair No. 1, though as regarded No. 2 pair, he thought they might come out too heavy in markings. He endorsed Mr. Nelson's remark in respect to double yellow and double Buff. —After a few useful hints were given by Mr. Nelson, Mr. W. Stafford proposed a vote of thanks to the lecturer.—Mr. Oldham seconded.—Mr. Hill supported.—Mr. Davies also made a few noble remarks. —Mr. Nelson responded, and thanked the members for their kind attention, and hoped there would be as good a muster to hear Mr. Oldham at the next meeting.—W. STAFFORD, secretary.

LEWISHAM AND DISTRICT C.B.S.

A well-attended meeting was held on April 7th at headquarters to hear Mr. Hazell's lecture on the Norwich Plainhead. Prize money and specials for late Pair Stock Show were handed to the respective winners. Schedule for British and Foreign Bird Table show was duly drawn up. Two new members were elected—Messrs. Fisher (New Bridge-street, E.C.) and H. Pallett (W. Dulwich). The meeting closed with a hearty vote of thanks to the lecturer, Mr. Hazell, for his most interesting lecture, and for his able replies to the questions with which he was bombarded at the close of same Mr. Hazell suitably replied.—H. THOS. LUCAS, Hon. Sec.

WIMBLEDON AND DIS. C.B.S.

Usual monthly meeting was held at 6, The Broadway, on April 6th. Mr. F. Piper presided, and there was a good attendance. Secretary reported proposal to hold annual show on November 17th and 18th, provided they could get Queen's Hall. Young Bird show will be held on July 6th, Mr. J. Robson to judge. Three new members were nominated. A discussion took place on proposed Federation rules, and several deletions and amendments were suggested to the delegates (Mr. J. Carson and the secretary). Impromptu questions occupied the remainder of the time, and a very interesting meeting was brought to a close with a vote of thanks to Mr. Piper for presiding.—H. SMALL, Hon. Sec.

BURTON-ON-TRENT C.B.S.

About 20 members attended the monthly general meeting held on April 7th, at headquarters, the New Inn, Station-street, Mr. R. Coltman in the chair. The secretary read a letter received from Mr. W. A. Cook acknowledging a present of a pipe and case, also a tobacco pouch, presented by his colleagues, the committee, on his leaving England a week ago. Mr. T. Kirkland then gave a very interesting exhibition of washing Canaries. The two subjects for the bath, judging from their soiled plumage, had evidently been waiting for some time for this exhibition. In six minutes for each bird their appearances were very much altered, and towards the close of the meeting both birds were on the perch looking the picture of health and cleanliness. A very hearty vote of thanks was given to Mr. Kirkland for his instructive exhibition. Then we had an excellent paper on rearing and feeding the Hawfinch by Mr. S. Hakes, a well-known exhibitor of this beautiful Finch. The paper proved of very great interest, and Mr. Hakes was warmly thanked for the trouble and pains he had taken to lay bare so many useful hints. A vote of thanks to the chairman brought a most enjoyable evening to a close.—S. A. DICKEN, Hon. Sec.

LONDON AND COUNTIES O.A.

The adjourned extraordinary general meeting was held on April 6, at headquarters. The President, in opening the meeting, asked the members to follow up the good work already done, and sanction the recommendations of the committee for the smooth and proper working of the association's affairs. The secretary read two letters he had received from the hon. solicitor to the association, relative to the provision of alterations and additions of rules, and consequent upon this a new rule was added limiting the power to do so at the annual or a specially convened meeting. The recommendations of the committee were adopted *nem. con.*, and the regulation of the time of ordinary monthly meetings was embodied in Rule 2, the time agreed upon being 8.30, and to terminate at 10.30. The question of headquarters was carefully gone into, and it was unanimously agreed to accept the invitation to return to the old headquarters at the "Goat and Compass," Euston-road. The President congratulated the members on the splendid manner in which they had received the suggestions for the re-organisation of the association, and said he felt sure the London and Counties would be able to make good headway in future. The work was now complete, and it rested with the members to make it a success. A vote of thanks to the chair closed the meeting.—J. C. A.

SCOTTISH NORWICH PLAINHEAD C.C.

Committee meeting held in Neilson's Temperance Hotel, Glasgow, on April 11, Mr. Winter, President, presiding, others present being Messrs. Aitchison, Chalmers, Ferguson, McLay, McFarlane, Sloan, Searle, Watson, Young, and the newly-elected secretary, who received a cordial reception. The first business dealt with was the International contest between the English and Scottish Plainhead Clubs, all present sincerely regretting that no contest had taken place during the past two years, and trusting that the clubs would once more meet in friendly rivalry during next show season. With this end in view, the secretary was instructed to get in touch with the English Club secretary as to the most suitable date, and report at next meeting. The question of a Club Show was then tackled, and it was unanimously agreed to hold the same in conjunction with some open show other than the contest show. At this point, Mr. Ferguson moved, and Mr. Aitchison seconded, that birds in unflighted classes competing for club trophies during the next show season be bred by the exhibitor, and this was agreed to. Societies desiring the contest or club show to be held in conjunction with their exhibitions, and those desiring the patronage of the Club, are requested to make early application, in order that their claims may be considered at next committee meeting. Members please note that birds must be exhibited in club show cages, which are identical with the English Club cage. Mr. James F. Dewar, 2, St. Patrick Square, Edinburgh, is the appointed cage-maker, but members are at liberty to get their cages from any other maker, or make their own, the only stipulation being that they must be strictly club pattern. The following gentlemen were admitted to membership:—Messrs. T. and H. Nisbet (Musselburgh), W. Simpson (Airdrie), J. McNaughton (Dunipace), A. Miller (Glasgow), H. Moreland (Falkirk), W. Shearer (Hamilton), J. Allan Hill (Blath). The secretary will be pleased to hear from any Fanciers desiring to join the Club, and equally pleased to hear from all old members. Annual subscription, 2s. 6d.—J. BROWN, Secretary, 97, Petershill-road, Glasgow.

STONEHOUSE (N.B.) C.B.S.

A meeting was held on April 4, Mr. John Whitelaw presiding, over a large number of members. Mr. George McAlpine was elected vice-president, and it was also decided to hold our first open show on December 19, providing this date is not taken up by any other society. If we have taken up any other society's date, the Secretary of such society should communicate with us at once, to avoid clashing. This was all the business. The next meeting will be held in the Public Hall on April 19.—JOHN GOVAN, Sec., 7, Union-street, Stonehouse, N.B.

[Please write on one side of the paper only.—ED.]

DULWICH O.S.

Committee meeting held April 2nd, when dates of shows were confirmed as follows:—Annual, October 27th and 28th, Messrs. G. Gardner, W. Mundell, W. Vale, judges; Young Bird Show, June 18th, judges Messrs. Gardner and Robson; British and Foreign, September 1st, judge W. Vale. Country ramble, first outing, third Sunday in May, with Messrs. Gain, Lovesy, Pocock, Rogers, and Mazzoni as sub-committee to carry out arrangements. The society's challenge cup was selected, and weighs 49 ozs., and is solid silver, of a beautiful design, value £15 15s. Mr. Roger's cup, value £2 2s., for Young Bird Show, was greatly admired, being very pretty; also his gold medal for most points in novice classes. Mr. Wilmot's cup is also a beautiful specimen. Messrs. T. Boydon, T. Silverthorn, Hyams and Pardon were elected members; total on books, 70. Votes of thanks were accorded Mr. Goodwin for presenting society with complete set of hooks, and Mr. Pocock for a ledger account book. Arrangements were made for lecture by Mr. Morris on Norwich Plainheads at next meeting.—ROGERS and MAZZONI.

NORTHERN YORKSHIRE C.C.

Meeting held at Lockhart's Cafe, 65, Grainger-street, Newcastle, April 1. It was decided to hold three table shows for young birds during the coming summer. The following are the dates and judges:—May 27, Mr. J. Shepherd; June 17, Mr. T. C. Crawhall; and July 8, Mr. J. Slack. The Secretary promised a special for most points over these shows, and will not himself compete for it. It was also decided to hold a nest feather show on July 25; five classes, as last year. It was decided to give three medals at each show, as last year, one each respectively for old bird, young bird, and novice. Societies requiring our patronage must give at least five open classes for Yorkshires. In order to encourage the novices, it was decided to ask the committees of shows having our patronage to provide at least one class for novices. Mr. Ellwood will guarantee the class at one show, Mr. Crawhall at another, and the N.Y.C.C. at two more, prize money to be according to the schedules. The novice medal is to be awarded to birds shown in novice classes. At least three members must compete for medals or they will be withheld. The exhibitors at table shows must be paid up, or they will not be allowed to compete. Messrs. Butler and Campbell, of Jarrow, and Mr. Crawhall are giving two cash specials for most points, and second most points in novice classes. Thus it is hoped to help the novice in this variety, and give him a chance of winning some of his entry fees back again. The following gentlemen were admitted members:—Messrs. G. Tweedie (Maryport), E. Woodhead (Hartlepool), and White (Newcastle). Intending members should apply at once to—T. C. CRAWHALL, Hon. Sec., 121, St. George's terrace, Newcastle-on-Tyne.

GATESHEAD AND DISTRICT C.B.S.

At the last meeting the following gentlemen were proposed and accepted as members:—Messrs. J. Gilhespy, S. Robson, J. Jonasson, J. Campbell, W. J. Smith, E. Carr, W. Richardson (all of Gateshead), Messrs. T. Pearce (Newburn), M. Waugh (Newcastle), G. Dobinson (Seaton Delavel), J. Dutton (Hebburn), J. Lennox (Pelaw). These all received a hearty welcome into the ranks of the "Palace of the North." A letter was read from Mr. Vardy, and after discussion Mr. J. Trengove was finally selected as one of our judges for show on December 11th and 12th. It was agreed to hold the first feather show on June 20th in a large room adjoining the Old Five Hand, and Mr. Lippenwell has very kindly offered 42s. towards expenses. It was also agreed to have 19 classes—two each Norwich, Yorks., Cinnamons and Borders, and one each Mule or Hybrid, Crest, crest-bred, A.O.V. Canary, novice, A.S. Linnet, Goldfinch or Bullfinch, A.O.S. Finch or Bunting, A.O.S. British bird, novice A.S. British bird, and Foreign—with an entrance fee of 6d. per cage. Mr. Boyle (York) was selected to judge F.F. Show. After discussion it was proposed to alter novice members' class to two separate classes—Crests and crest-breds. A letter was read from the secretary of the Northern Crest Club *re* a novice class for Crests or crest-breds. After some discussion Messrs. T. Almond and T. Taylor offered to guarantee one class each, and it was agreed to put on, open to all, one class for novice Crests and one for novice crest-breds (young birds). Members are requested to assist secretary by paying subs. by date of next meeting, April 29. Twenty new members have joined this year, which should be a happy augury for our 1908 exhibitions.—T. TAYLOR, Hon. Sec.

LANCASHIRE AND LIZARD F.A.

A special meeting was held at Ye Old Boar's Head, Manchester, on April 4, and was well attended. Mr. John Garner (Hazel Grove) took the chair. The ordinary business of the Society was first gone through, one pleasing feature being the proposing of new members, these being Messrs. A. C. Dandie, President Scottish National, and W. P. Barnes, the well-known Canary judge. The presentations were then proceeded with, and Mr. Jos. Hampshire (of Oldham) presented the Lancashire Challenge Cup to friend John Garner in a few well-chosen remarks to which Mr. Garner suitably replied.—Mr. Garner then presented the Lizard Challenge Cup to Mr. John Dewsnap (of Glossop), who jocularly mentioned his pleasure in winning the cup from Mr. John Rukin, who had previously held it. Mr. Oldham then received a beautiful gold medal for most points won by a novice. He remarked that with only one exception he had won it with birds bred by himself, and he gave Mr. Garner due notice that he meant having hold of the Lancashire Challenge Cup next time, if trying would do it. Mr. Garner then presented Mr. Hector Oliver, the late secretary of the Society, with a splendid gold medal and also a gold brooch for his "better half," as a memento of the appreciation of the members of the L. and L.F.A. Several members spoke very feelingly, and it was the general opinion that his place would be hard to fill. Mr. Oliver replied on behalf of himself and wife, and was evidently gratified at such exhibitions of good will. The rest of the evening was spent in a social and convivial manner. Will all Societies desiring our patronage kindly make early application, so that they can be considered at our next meeting. I shall be pleased to forward rules and particulars to anyone wishing to become a member of the L. and L.F.A. Next meeting to be announced in CAGE BIRDS in due course.—JOHN RUKIN, Hon. Sec.

LANCASHIRE CANARY ASSOCN.

Meeting held at the Great Eastern Hotel, Oldham. Mr. J. Nuden presiding over a good attendance. We discussed the medal business, and selected a firm to place the order with, but left the matter over for the secretary to write asking for a selection, and we hope to have some before our next meeting, which is to be held at Littleborough on the date of the first Feather Show held there. We also proposed two new members to our ranks, and hope to have more names for our next meeting. By joining our Society early Fanciers will have a grand chance of competing for the medals. We provide three separate medals for the novices.—WM. ADAMS, Sec.

SHETTLESTON AND DIST. C.B.S.

The adjourned meeting was held in Railway Mission Hall, Station-road, on April 4th. Mr. Andrew Berry presided. The office-bearers for year 1908-9 are as follows:—President, Mr. Andrew Berry; vice-president, Mr. George A. Henderson; committee, Messrs. William Aitken, John McKay, William Christie, and George Corbett; secretary and treasurer, William Devlyn, 12, Balgair-terrace, Shettleston. It was unanimously agreed that the district be left open for this year. Mr. Robinson, Scotstoun, was elected a member. The committee were instructed to meet and draw up a draft of rules to be submitted at next meeting. Fanciers desirous of joining this Society are cordially invited to communicate with the secretary.—WM. DEVLYN, Secretary.

NORTHERN CREST CLUB.

A meeting was held in "The Cafe," Fawcett-street, Sunderland, on March 31st. The inclement weather accounted for only a moderate attendance. Mr. Currah presided. Mr. Thomas Robson was re-elected C.B.U. representative. It was decided that societies desirous of having the patronage of this club should provide six classes for Crests and crest-breds, viz.:—Crested cock, crested hen, crest-bred cock, crest-bred hen, young crested class, and young crest-bred class; the points gained in the young bird classes only to count for point specials. As to whether N.C.C. clips should be attached to cages at the forthcoming shows, it was decided that in no case must N.C.C. clips be attached to cages excepting at the show that has received the club's patronage, viz., Gateshead. It is therefore hoped that members will take note of this so that no trouble will accrue at other shows. The Rev. Father Rickaby was elected vice-president, and Mr. Colin Miller, 13, Hope-terrace, Leith, was made a member. It is to be hoped secretaries will take note of the above-mentioned classification for future guidance. The society is greatly indebted to Mr. George Goulden (Longwathby), who has promised to provide a medal to be competed for in novice competition, probably at Gateshead. If any of our members have a medal or two to spare I would be very much obliged if they will send them to me so that I may arrange for them to be competed for by novice members.—JOHN G. HUTCHINSON, Hon. Sec.

SINGING CONTESTS.

DARLINGTON.

Open Linnet singing contest at Mr. H. Brownless's "George Hotel," Darlington, Saturday, April 25th. First prize, timepiece; second prize, silver medal. Entrance fee, 6d. each bird. First birds to be hung at 2 o'clock.—Judge, T. Cannon.—(ADVT.)

LEEDS.

Usual weekly contest held at King's Head, Shannon-street, April 11th, when 20 birds sang. 1st, S. Hardcastle; 2nd, T. Johnson; 3rd, D. Clegg. Judges, Messrs. Crane and Towers. Also on April 12th, when 38 birds sang. 1st, C. Biss; 2nd, Hardcastle; 3rd, T. Johnson; 4th shared between Hardcastle and T. Stead.—Judges, Messrs. Cooper and H. Hayes.—T. SUMMERS, Hon. Sec.

SHEFFIELD.

Contest held at the Don Inn, when fifteen birds competed, the first winner being Knight, 66; 2, Knight, 66; 3, Baker, 47. Judges, Messrs. Timms and Blackhadder.—TIMMS, Sec.

YORK.

Usual weekly contest held at Crown Inn, North-street, April 11th, when thirty birds sang, with the following result:—1, J. Lee; 2, T. Buckle; 3, J. Firth; 4, G. Oxberry; 5, G. Horwell; 6, R. Grainger; 7, T. Lambert. Judge, Mr. W. Perry; timekeeper, Mr. J. Mason.—J. W. SMITH, Sec.

Usual weekly contest held at the Bricklayers' Arms, Palmer Lane, Hungate, on April 11th. Result:—1, J. Limbert, junr.; 2, A. Chaplin; 3, Thos. Massheder; 4, Moley Warp; 5, J. Evans; 6, Shoddy Foster. Judge, Mr. Jno. Paver; timekeeper, Mr. J. Limbert, senr.—WM. EMPSON.

WARRINGTON.

Usual fortnightly contest took place at Alexandra Inn on April 11th. A large number of entries were present. Results:—1, H. Stanway; 2, W. Leah; 3, T. Armitage; 4, W. Mather. Judges, Messrs. H. Richardson and S. Leigh. Timekeeper, Mr. T. Crawford. Next contest, open to all comers, 1s. per bird, time singing, will be held at the above place on April 25th, when we expect to see some of our Lowton friends, to arrange a match, seeing they have challenged to sing any club in Lancashire for suppers.—J. W. MATHER, Sec.—ADVT.

BLACKBURN.

The Blackburn Lark F.A. held an open sing on April 11th at the Commercial Hotel, Nova Scotia. The following were winners:—1, G. Knowles, "Owd Cobbler," 9min. 56sec.; 2, J. Hunt, 9min. 45sec.; 3, J. Counsell, 8min. 35sec.; 4, S. Fletcher, 8min. 8sec.; 5, R. Airey, 7min. 52sec.; 6, Jackson (Burnley), 7min. 4sec.—Timers, Messrs. W. Sharrock and R. Sheffield.—JOHN SHEFFIELD, Sec.

The Blackburn Linnet S.A. held week-end contest April 11th at the club headquarters, Old Red Lion, Snigbrook. Winners: 1st, J. Dobson; 2nd, G. Rostron; 3rd, R. Topping.—R. HAYHURST, Sec.

SKININGROVE.

Week-end contest held on March 28th. 1st, Long; 2nd, Jackson; 3rd, Long. On April 4th: 1st and 2nd, Long; 3rd Dobson. On April 11th: 1st, Dobson; 2nd, Long, 3rd, Fox. Mr. J. C. Havelock, timekeeper; and judge, Mr. F. Deadon.—M. DOBSON, Sec.

ELSECAR.

A contest for the benefit of Mr. J. Vaines was held on April 4th, when 22 birds were entered. Members gave two silver medals and a breeding cage, and other gifts made a total of 18s. The winner did 4 min. 26 sec. out of five minutes. Prize winners:—1st, H. Watkin, 4 min. 26 sec.; 2nd, A. Marples, 4 min. 4 sec.; and 3rd, J. Fenton, 4 min. 2 sec. Usual week-end contest held on April 11th at Furnace Inn, Milton, when 16 birds entered, the winner doing 3 min. 50 sec. out of five minutes. Prize winners:—1st, S. Vaines, 3 min. 50 sec.; 2nd, A. Marples, 3 min. 42 sec.; and 3rd, W. Lofthouse, 3 min. 30 sec. Timekeeper, Mr. E. Charles. Marker, Mr. J. Denton.—E. CHARLES, Sec.

FANCIERS' FESTIVITIES.

Caterham F.C.

The annual dinner was held at the Railway Hotel, Caterham Valley, on March 23rd. There was a very large assembly of patrons and friends. The chair was taken by the President, W. G. Soper, Esq., J.P. The loyal toasts were duly honoured. W. J. Morcomb, Esq., proposed "The Fanciers' Club," in a felicitous speech, in which he claimed a six years' membership of the club, and said he had exhibited with some measure of success at the shows. He spoke in eulogistic terms of the officers, from the excellent president to the indefatigable hon. secretary (Mr. J. Kirby), all of whom did their best to make the club and its shows a success. The president and the hon. secretary replied. The latter said that the show of 1907 was a marked success. They had a balance on the right side of £9 12s. 9d. (Applause). This enabled them to discharge an overdraft at the bank of £4 12s. 3d. and another item of £4, and still leave a balance in hand of £1 10s. 6d. (Applause). This year they intended making a new departure, i.e., to hold two members' young stock shows, one in July for rabbits and cage birds; and one in August for poultry and pigeons. (Hear, hear). The other toasts were "The Visitors," proposed by Dr. Davey, and responded to by Sir W. Lee-Warner; and "The Chairman," proposed by A. H. Rolls, Esq., J.P. A splendid programme of vocal and instrumental music, recitations, etc., was supplied by Messrs. Tanner, Mathieson, Snow, Vincent, Goodall, Doyle, Crane, Victor Fletcher, L.R.A.M., Mason, Dr. Bligh, A. H. Rolls, etc. Mr. C. J. Tugwell, F.N.C. Mus., presided at the pianoforte.

City of Glasgow O.A. hold a Successful Smoker.

The members of the City of Glasgow Ornithological Association held a smoker on April 3rd in the Trocadero Restaurant. Mr. A. Jardine (President) occupied the chair, and ably performed his duties. He was supported by the following well-known fanciers:—Messrs. J. Renwick, T. Thomson, D. Black, S. Russell, A. M. Baird, Ferguson, McIlwain, Knox, G. Marlin, and A. Malcolmson. The "King" was toasted with enthusiasm. Master Kerr then gave a very fine reading (a young artiste of much promise), and some musical items followed by Messrs. Muir, Begg, Junr., Mowatt, D. H. Gordon, and an instrumental combination by Messrs. Milligan, White, and McNab, all of whose efforts were much appreciated. The function of the evening was the presentation of a gold medal, with suitable inscription, to their late president, Mr. John Young, along with a handsome umbrella for his good lady. The medal bore a suitable inscription. In making the presentation, the Chairman (Mr. Jardine) remarked that he had a very pleasant duty to perform. No doubt, he said, you are all aware that Mr. Young asked at a general meeting to be relieved of the office of president, as he considered that the honours ought to go round. It was at once thought that something should be done to show their appreciation of the way he conducted the affairs of the City of Glasgow Association during the time he was president. He was courteous in his manner, unfailing in his duties, and he earned the respect of all the members. He (Mr. Jardine) found as his successor in office he would have a lot to do to come up to Mr. Young's standard. We have had many presidents, he continued, but none more popular. Mr. Young is a crest—or should he say, a Norwich?—fancier, and he felt sure they could not have had a president who could have been less biased, every fancier and every bird being alike to him. His whole object was to make the City of Glasgow show a success. In the name of the subscribers he had pleasure in presenting Mr. Young this very handsome gold medal, or pendant, as a mark of esteem and appreciation, and trusted he would long be spared to wear it, and look back with pleasure to the time he was president of the City of Glasgow show. He had also much pleasure in asking his acceptance of an umbrella for his wife. Gentlemen, concluded Mr. Jardine, "I ask you to drink to the health of our esteemed friend, Mr. Young." This was done in right royal manner. Mr. Young, in reply, said that the chairman had spoken so many kind things about him, and their handsome gifts had been so unexpected by him, that he felt quite overcome and almost speechless with their kindness. He had done his best in the interests of the Fancy, and hoped that any unintentional shortcomings on his part would be received in a generous spirit. He would always remember their kindness, and in the future, as in the past, he would always take a lively interest in the welfare of the City of Glasgow show and its members. In thanking them for these handsome gifts, he could assure them that in the years to come he would treasure them as evidences of their kindness and goodwill towards himself and his wife, who would be afforded much gratification by such a handsome and useful gift. More musical talent then favoured the company, Messrs. Murray, Smith, Thomson, Conie Mitchell, Farquhar, Chalmers, McGil and Young (duet), and Edwin, from Birmingham. Mr. Alex. McDonald proposed the Kindred Societies, in a racy speech, and gave a hearty welcome to those friends who were present. Mr. A. W. Baird (Paisley) expressed the pleasure it gave him and others to be with them, and also for the kind manner of their reception. Mr. Marlin (Hamilton) proposed the City of Glasgow show, and his remarks showed the steady progress and present high position attained by the City O.A. The Chairman, in his reply to Mr. Marlin, mentioned that he was in favour of equal prize money all round, a remark which seemed to meet with general approval. He also said that he was pleased to see such a large turnout of members, and he would embrace this opportunity of stating that, as their President, nothing on his part (with their kind support) would be found lacking in furthering the interests of the City of Glasgow show, and the hobby which they all had so much at heart. There was a large turnout of fanciers, including Messrs. Jardine, Knox, Renwick, Black, Russell, Baird Senr., Baird Junr. (Paisley), Renfrew, Baird (Springburn), J. Philips, McDonald, T. Thomson, Semple, McIlwain, Kerr, Paterson, Cliff Bell, Jackson, Kinloch, Slater, J. Adams, G. Martin, M. Craig, Erskine, Shaw, J. Young, Muir, Millar, H. Henderson, T. Ferguson, Malcolmson, T. Thomson, Junr., McFarlane, Begg, etc. The musical talent was of a high order, and the society is to be congratulated on the arrangements made for the comfort of a record attendance.

THE SHOWS.

WEST BROMWICH & DIST. C.B.S.

At the last members' table show of British birds and Mules there was a fairly good entry, and some very nice birds. GOLDFINCH AND BULLFINCH: 1, spl. for best bird in British, Viles; 2, 3, Green. A.O.S. HARDBILL: 1, Norris; 2, 3, Green. MULES: 1, Sturges; 2, Green; 3, Viles. Mr. Weaver, of Wolverhampton, judged, and afterwards gave us a splendid lecture on the breeding and general management of birds during the breeding season, which everyone present enjoyed. A hearty vote of thanks brought a pleasant evening to a close.—T. DUFFIELD, Hon. Sec.

TREDEGAR AND DIST. F. AND F.S.

At the local show held in connection with the above, three classes were provided for cage birds. With the exception of the Foreign Bird class, which only contained one entry, these were well filled, the British Bird class being exceptionally strong. Mr. Tippins won the points' special. Mr. Gower judged. CANARY: 1, Beavan, typical clear Yellow Yorks., hen good length, nice style and feather; 2, 3, Tippins, with a clear Buff cock Yorks, and a clear Yellow Yorks in the order named, both nice quality exhibits. BRIT.: 1, 2, Tippins, winner neat Goldie, A1 blaze and chest, second a good Magpie, not in the best of condition; 3, Williams, nice Goldie, fine blaze and condition.

YARM C.B.S.

The first members' exhibition took place in the Town Hall on April 2nd. The society has only recently been formed, and the promoters are to be congratulated on the success it has so far attained. Some very fine birds were shown, and Mr. Marwood (Thornaby), who acted as judge, had some fine points to decide upon. The secretarial duties were ably carried out by Messrs. J. Wilkinson and E. Danby. GOLDFINCH: 1, 3, vhc, Weedy; 2, Garbutt and Clement. BULLFINCH: 1, Johnson; 2, Chadwick; 3, Cartwright; vhc, he, Weedy; c, Smith. BRAMBLEFINCH, ETC.: 1, vhc, Garbutt and Clement; 2, Danby; 3, Hunsom; hc, Walinger; c, Henderson. LINNET: 1, Weedy; 2, Garbutt and Clement; 3, Cartwright; vhc, Smith. ANY VAR.: 1, 2, 3, Wilkinson and Danby; vhc, Garbutt and Clement.

LEICESTER C.B.S.

The following were the awards, most ably placed by the judge, Mr. W. Stevens, and which gave general satisfaction. This being the last Table Show of the season, the competition was keen, some good specimens being shown. Through illness, Mr. Hunt was unable to stage any of his birds; it was a slight attack, however, and he is now about again. The show was held at headquarters, the Hare and Pheasant Hotel, High-street, on April 8.

HYBRID PAIR (for breeding, between British or Foreign and Canary): 1st, vhc, Tyler; 2, Heighton; 3, Warren; hc, Seal. (Between any variety British or Foreign): 1, Seal; 2, Harkborn; 3, Moore; vhc, he, Tyler; c, Collins. A.S.BRIT. (that has previously been shown, not having gained a prize): 1, Collins; 2, vhc, Tyler; 3, Ride. Mr. Seal was awarded first with a fine Goldfinch, but was disqualified.—J. A. TYLER, Sec.

PARTICK AND DISTRICT C.B.C.

Usual monthly meeting and show of British birds was held in the Joiners' Hall, Partick, on April 9th. There was a splendid turn-out of exhibits, and quality was good. Mr. T. Erskine (Glasgow) judged, and his awards gave general satisfaction.

FOR. GOLDFINCH, ETC. (3): 1 and spl. for second best bird in hall, McRobbie; 2, Gow; 3, McLintock. BRIT. GOLDFINCH, ETC. (8): 1 and 4, Gow; 2, Simpson; 3, Coltart; vhc, hc, c, Brown. LINNET (8): 1, 3, Graham; 2, 4, Kidd; vhc, Gow; hc, Fairweather; c, Priest. SISKIN (3): 1, spl, for best bird in hall, Gow; 2, McLintock; 3, Kidd. REDPOLL, ETC. (7): 1, Graham; 2, Gow; 3, Simpson; 4, Coltart; vhc, Priest; hc, McLintock; c, Brown. GREENFINCH (8): 1, Gow; 2, Graham; 3, Webster; 4, c, McLintock; 5, Coltart; 6, McRabbie. A.O.S. (5): 1, vhc, Gow; 2, Simpson; 3, Coltart. LIGHT MULES: 1, Webster. DARK: 1, Coltart.—J. HENDERSON, Secretary.

GRIMSBY AND DISTRICT O.S.

Monthly meeting at the Hall of Science, Freeman-street, on April 6th. A letter was read from Mrs. Barwick expressing her willingness to become a patroness of the society. Mr. J. H. Roe (Derby) was elected to judge the Canary classes, and Mr. Fred. Medley (Hull) the British and Foreign at our open show, 20th and 21st October next. The following judges were elected for our Nest Feather Shows: May, Mr. H. E. Stubbs; June, Mr. George Harland (Hull); July, Mr. D. Hope (Hull); August, Mr. Pepper (Hull). It was proposed that our members arrange for a country ramble, with the object of studying wild bird life in the neighbourhood of Newsham Lake, about the middle of May, and the matter was left with Mr. Albert Sutcliffe. Those wishing to take part in the ramble should notify the secretaries at the next monthly meeting in May. Table Show result, Mr. W. H. Moore, sen., awarding the cards to the satisfaction of all:—GOLDIE OR BULLFINCH: 1, Harness; 2, Way. LINNET OR GREENFINCH: 1, Way; 2, 3, Drinkall; 4, W. H. Moore; vhc, c, Dowie; hc, Harding. CHAFFINCH: 1, W. H. Moore. REDPOLLS: 1, Dowie; 2, W. Drinkall. FOREIGN: 1, W. H. Moore; 2, Toole.—MOORE and CROWSTON, Secs.

A COLUMN FOR FANCIERS.

Appended are brief particulars of some of "Cage Birds" SPECIAL PUBLICATIONS for keepers and lovers of birds, with post free prices.

"THE HYGIENE OF BIRD-KEEPING." - 1/1.
By W. GEO. CRESWELL, M.D.
A most useful manual, thoroughly treating of modern hygiene in bird-keeping, by the most eminent living authority on the subject.

"SEPTIC FEVER OR CANARY PLAGUE." - 7d.
By R. H. C ARKE, M.D.,
A very useful booklet concerning this dread disease. It is the only one published, and should be found in every bird-lover's library. Dr. Clarke has given the subject very special study.

"THE NORWICH PLAINHEAD CANARY." 1½d.
By J. L. PAYNE.
A Lecture reprinted from CAGE BIRDS, delivered by this leading judge and expert before the London and Provincial Ornithological Society, and pronounced by all experts to be a most valuable pamphlet concerning the breeding of the variety.

BREEDING CAGE LABELS, 1d. doz., 7 doz. 6d.
A boon to all breeders. Neatly printed in sets of twelve, on perforated gummed paper. They can be torn off, and affixed to the breeding cage in a moment, and prevent all confusion. Useful alike to both small and large breeders of birds.

CARD BREEDING REGISTERS, 1d. each, 4 for 3d., 9 for 6d.
For hanging up in the birdroom. Printed on suitable stiff card, they are ruled so as to a complete record of the breeding results of six pairs of birds; invaluable for future reference, to ensure that knowledge of one's stock essential to accurate breeding.

LIVE BIRD LABELS, 24, 3d.; 50, 6d.; 100, 1/-
For use when despatching live birds on journeys by rail, or to the shows, etc. Printed in red ink and gummed on back. The simplest, neatest, and best on the market.

NOTE PAPER & POSTCARDS, 250 for 2/-; 500 for 2/6.
Until further notice we have decided to supply below cost price artistic Memorandum Forms and stout postcards, with name, address, twelve words of particulars, and blocks of any special variety of bird at half cost for cash. Carriage paid to any address in the Our latest style of note-head and postcard has been universally admired, and we will gladly send specimens to anyone enclosing stamped addressed envelope.

BLOCKS OF BIRDS, 1/6 each, 5 for 6/-, or 9 for 10/-.
For inserting in advertisements and for printing memorandums blocks of all kinds of birds at above low prices can be supplied. Larger blocks to order at cheapest possible rates. These dainty little blocks immensely enhance the appearance of note paper, postcards, and advertisements.

PICTURE POSTCARDS, 1d. each; set of six, 6d.
The most delightful and appropriate postcards of Canaries, British Birds, and Hybrids on the market, executed in colours by Mr. H. Norman. Ideal for Fanciers' correspondence. All represent exact and correct show types and have accompanying descriptions. State which bird or birds are required, or whether a mixed selection is preferred.
The latest set is entitled, "Pairs Matched for Breeding"; very educational art postcards. Price 3d. set of 8.

ORNAMENTAL PLATES, 1/- & 1/6 each.
The following coloured plates of cage Birds can be obtained mounted on stiff card and gelatined. This process makes them washable and gives them the handsome appearance and all the durability of framed plates under glass:—Bullfinch, Blackbird and Robin, Border Fancy Canary, Bullfinch Hybrids, Cinnamon Canary, Cinnamon Marked Yorkshires, Foreign Finches, Goldfinch and Bullfinch, Hybrids (popular), Lancashire and Lizards, Mules (popular), Norwich (Yellow), Parrakeets, Yorkshires. Price 1s. each. Crests, Desirable Aliens (Foreign Birds), Larks and Pipits, Norwich (Blaze of Colour), Wagtails and Stonechat. Price 1s. 6d. each
Also a padded plate of KINGFISHER having all the appearance of a hand painting executed on ivory. A most charming ornament for brackets, occasional tables, etc. Price 1s. All are post free.
Why spend large sums on decorating the house with other pictures?

FANCIERS' PRINTING.
Fanciers requiring business notepaper, postcards trade envelopes, etc., should write us for a quotation. We are now in a position to supply these at specially low rates combined with first-class work.

SEND YOUR ORDERS AT ONCE ACCOMPANIED BY A POSTAL ORDER TO

The Manager, "Cage Birds," 154, Fleet Street, London, E.C.

CONWAY. VALE OF CONWAY

and District Fanciers' Association. First Members, Show will be held in the Town Hall, Conway, **Saturday, April 18th.** 14 Classes. Numerous Cups and Specials'

Secretary, A. T. JOHNSON, Roc Wen, Talycafn, R.S.O.

SUBSCRIPTION RATES TO "CAGE BIRDS."

GREAT BRITAIN.—12	months,	6/6
6	"	3/3
3	"	1/9
FOREIGN AND COLONIAL— 12	"	10/-
6	"	5/-

Heartiest congratulations upon the Spring Number. It is grand value. The picture post-cards are worth treble the 2d. charged, and Mr. Norman has even excelled his previous work.—J. B. Waterman (East Dulwich).

Chiff Chaff and Wheatear.

Observers say the Chiff Chaff has this year arrived before the Wheatear. As a rule there is very little difference between them, and when we consider that they both winter in northern Africa, and are early starters for their summer haunts, they should arrive here simultaneously. The wind that would bring one, would bring the other. No doubt many Chiff Chaffs stay with us all the year round, especially in the south-west of England, but I cannot remember any record of the Wheatear having done so. Surely the lesser bird is not the hardier of the two? It is so much like the Willow Wren and Wood Warbler that many are unable to distinguish them; but the latter birds will not arrive just yet.

TWITTERINGS.

The Bodmin show will be held on November 11th, writes Mr. A. E. Jago, the hon. secretary.

Mr. J. C. Barnes (Sheffield) tells us that he has already upwards of 60 youngsters (Norwich and Yorkshires) doing well.

We have removed from 113, Hillhouse Lane, Huddersfield, to Clement Street, Birkby, Huddersfield, write Messrs. A. Moss and Son.

Mr. John Bee, late secretary of the Burnley and Dis. C.B.S., informs us that he has removed to the Railway Inn, Hapton, near Burnley.

I have been elected secretary of the Stirling and Dis. O.S., in place of Mr. J. McLaren, resigned, writes Mr. G. Hislop, 114, Baker Street, Stirling.

The Oakham and Dis. F.S. show, writes Mr. John Hibbitt, Junr. (hon. secretary), will take place on November 12th, and will be held under Cage Bird Union rules.

Mr. J. C. Barnes (Sheffield) is engaged, we hear, to judge at Hull, November 20th; Liscard, November 21st; Jarrow-on-Tyne, November 27th; Harrogate, December 5th.

Cage Birds Charts.

No. 5 of "Cage Birds Charts" is now in course of preparation. We anticipate it will be one of the most popular of this popular series, and readers should make certain they do not miss it,

All my birds are sold, writes Mr. P. W. Sumner (Birmingham). Letters were too numerous for me to answer all. Postal Orders were all returned with many thanks.

Kindly thank all who answered my advertisement in CAGE BIRDS for my hen Bullfinches, writes Mr. Geo. Lawrence (Redhill), as they are too numerous for me to answer by post.

Ten classes (five each Canaries and British Birds) are provided for in connection with the Doncaster Agricultural Society's show, to be held on June 25th. Entries close on June 10th.

I have always been highly delighted in looking at CAGE BIRDS. It is a very valuable paper to all bird breeders, and full of genuinely helpful matter.—H. CALVERT (Bradford).

The Kendal and Dis. C.B.S. will hold their first show on New Year's Day, 1st January, 1909, writes Mr. W. Vart, hon. secretary, when Mr. A. Wellings (Prescot) will judge all classes.

I have sold all the birds I advertised in CAGE BIRDS, writes Mr. Harry Allen (Wellingboro'). I could have sold them twenty times over, which speaks well for the circulation of CAGE BIRDS.

Mr. Clarkson, of Halifax, gave a lecture to the members and friends of the Bradford West C.B.A., on April 11th, writes Mr. H. Clegg, secretary, and a very enjoyable evening was spent by all.

The Barnsley C.B.S. looks like springing into life again, writes Mr. E. Carlisle, secretary. We have got a good working committee together, and hope to induce the breeders in the district to join us.

Mr. J. Copeland, assistant secretary of the Sunderland C.B.A., writes that a special meeting will be held on April 25th, and requests members to attend, as some special business is to be transacted.

It is definitely decided to re-name the Ilford Fanciers' Association, "The Ilford Fur and Feather Society," writes Mr. C. Collins (Ilford). It is open to the whole of Essex. Will fanciers kindly note this?

Kindly thank all who applied to my advertisement in last week's CAGE BIRDS, writes Mr. J. Lewis (Aughton). They are too numerous to reply to. I am sure CAGE BIRDS is *the* paper for all bird fanciers.

The Charts now appearing in the columns of CAGE BIRDS are a great help to novice exhibitors, and should be the means of improving our knowledge of birds of all descriptions.—ARTHUR H. C. LEGG (Perth).

The secretary of the Scottish Norwich Plainhead Club, Mr. J. Brown, 97, Petershill Road, Glasgow, is anxious to hear from societies desirous of having the proposed international contest, and the club show, held in conjunction with their fixtures, so that all claims may receive due consideration.

12 YEARS GUARANTEE

At the local show to be held on April 21st in connection with the Rugby and Dis. F.S., there will be four classes provided for cage birds—Norwich, A.O.V. Canary, and British Birds. Mr. A. Buswell (Lutterworth) will judge.

Mr. W. Mundell will again judge at our open show, to be held on October 17th, writes Mr. R. S. Black, hon. secretary of the Darlington C. and B.B.F.A. We have also decided to hold our first feather show on July 4th.

Will all members and friends of the Bradford East O.S., who intend joining in the ramble to Grassington on Easter Monday, writes Mr. H. Hill, secretary, meet at the entrance to the Midland Station at 8.30? The train departs at 8.50.

Kindly thank all who wrote in reply to my advertisement in CAGE BIRDS, re Budgerigar, writes Mr. Chas. Groves (London, W.), as I had far too many to be able to answer them. Letters came from all over the country, which speaks well for your paper.

At the general meeting of the Perth and Dis. C.B.S., held on April 4th, it was decided to hold the First Feather show on July 18th, at the headquarters, Danix Temperance Bar, Hannah Street, Perth, writes a local correspondent.

At our meeting on April 6th, writes Mr. Stephen H. W. Baker, hon. secretary of the Clapham and Dis. C.B.A., it was decided to hold an open show on October 1st and 2nd, under C.B.U. rules. The judges at same are Messrs. J. Robson (Canaries) and Allen Silver (British and Foreign).

We have no doubt that Llanfhaiadrymmochnant is a very nice place to live at, but as the address for an advertisement at the "three words a penny" rate, it seems like "hitting below the belt." Yet this appalling collection of letters of the alphabet is what we have had fired at us this week.

The special meeting of the Ealing, Hanwell and Dis. F.S., called for this week, writes Mr. W. Bird, secretary, will not be held, but the business will be discussed at the usual monthly meeting on April 23rd, at the Mission Hall, Church Road, Hanwell, when Mr. Howe will lecture on "How to succeed in the Fancy."

We hear that wedding bells will be ringing at Perth on Easter Tuesday, when that well-known local bird-lover, Mr. A. H. C. Legg, is to lead to the altar the lady of his choice, Miss M. Jones. The ceremony is fixed for 9.30 am., in the English Congregational Church. May happiness wait upon them, will be the wish of all.

I received this morning, writes Mr. J. Sandiford, the well-known Preston dealer, an order for 3 cwt. Royal Red Feed from Melbourne, Australia, and am also sending out this week Siberian Goldfinches to Oporto, Portugal, Norwich and Roller Canaries to Claremont, S. Africa, and a quantity of mixed birds to Christiania. These orders were all received through your noted paper, CAGE BIRDS.

At the last monthly meeting our esteemed secretary (Mr. R. Sampson) resigned office, and I was duly appointed to take on his duties, writes Mr. H. S. Negus, 164, Moorland Road, Cardiff. The date of our forthcoming open show is fixed for November 25th and 26th; judges' names will be announced later. Mr. Sampson will have the sole management of that show, as in the past, I myself being unable to give the necessary time to it.

The magnificent Imperial Hall has been booked for the Dulwich O.S. annual open show on October 28th and 29th, write Messrs. Rogers and Mazzoni, hon. secretaries. It is second to none for a cage bird show, has an excellent top light, and is lighted throughout by electricity. It has been hired at a considerable figure for three days, so that the birds may be staged and attended to on the day before the show.

We are now preparing the manual for 1908, writes Mr. A. B. Forse, secretary of the Walthamstow F.A., and I should be glad to hear from any fanciers who are desirous of joining, so that their names may be included in the membership list. Members who have not yet paid their subscriptions for 1907 should do so at once to ensure their names appearing in the manual. Communications should be addressed to me at 29, Thornhill Road, Leyton, N.E.

The recommendation of the Board of Agriculture that farmers should combine and exterminate the rats, which cause such incalculable damage around the farms and in the fields, seems likely to bear fruit. The Rev. Canon R. Abbay, Rector of Earl Soham, Framlingham, has lately been successful in inducing the residents of that important agricultural Suffolk district to apply several hundred tubes of Danysz Virus simultaneously over the whole parish. The Virus was applied over an area of 2,000 acres, each farm and homestead being systematically treated in turn.

I have resigned the secretaryship of the Hamilton Cadzou Oaks Ornithological Society, after eight years of office, writes Mr. R. Gadsden, and would like to thank all fanciers and exhibitors for support and assistance rendered me. Q.M.-Sergt. Cant, A.P.C., 26, May Street, Hamilton, has been appointed my successor. He is the right man for the position, and will make a very able secretary, and I hope fanciers and exhibitors will support him in the future as they have myself in the past.

I have taken over the secretaryship of the Barrow and Dis. C.B.A., writes Mr. G. Large, of 7, Back Salthouse Road, Barrow-in-Furness, and it is my intention to do my best for our association. All correspondence should be addressed to me. Our next meeting is on the 22nd of April, when all members should attend, as the business is of great importance.

Y.C.C. of Ireland.

A lengthy letter on matters concerning the Y.C.C. of Ireland comes to hand from Mr. R. Devitt, but owing to the holidays necessitating our going to press a day earlier than usual, we have had to hold over its publication until next week.

"Cage Birds" Charts.

We have to tender an apology to those readers whom we have been unable, up to the present, to supply with copies of Nos. 1, 2, and 3 of "CAGE BIRDS" Charts. The run upon them has been quite unprecedented, and we are right out of stock at the moment. But we are reprinting, and hope by next week-end to have filled all the orders we have still on hand.

The Yorkshire Union.

Will secretaries of societies in the Yorkshire Union kindly forward to the new secretary of the Union their addresses, and also the names and addresses of the delegates for next session, and state whether their society intends holding an open show next winter, so as to enable him to gather together the business for next delegates' meeting?—Samuel Dean, hon secretary, 6, Ashmount, Great Horton, Bradford.

Welsh Cage Bird Club.

The annual meeting will be held on Easter Tuesday, April 21st, at the Locomotive Inn, Aberdare. Committee will meet at 10.30 a.m.; general meeting at 11.30. A washing competition will commence about 2.30, open to champions, also a competition for those who have not won more than three first prizes in open classes. Presentation of cups, teapots, and medals, songs, papers, and a recitation by a noted Welsh hard, gramophone selections, speeches, etc. Will all who wish to compete send in their names at once. Fanciers who wish to join the club should send on 2s. 6d., which will make them eligible to compete, or attend. This is the first meeting of the kind held by the club, so that we want to make it a success. A club show will be discussed, also alteration of certain rules, etc.—D. H. Tedstone, hon. secretary, 4, George Street, Brecon.

EASTER HOLIDAYS.

In consequence of the Easter Holidays,

The Offices of "Cage Birds" will be closed from Good Friday, April 17th, to Easter Monday, April 20th, inclusive.

We shall re-open Tuesday morning, April 21st, and ask correspondents and advertisers to make sure their announcements for our next issue reach us on that day.

We Think So.

Mr. Allen, of Faversham, sends us a recent cutting from the "Kent Express" recording the doings of the Lenham Sparrow Club, from which it appears that during the past year the members were responsible for the deaths of several thousand rats, moles, etc., 2,931 Sparrows, and 222 Bullfinches. He pertinently asks whether, seeing that the Bullfinch is protected in the district throughout the year, steps ought not to be taken to bring to book those offending against the Act.

The Swallow a Resident.

It is interesting to learn that the Swallow (*hirundo rustica*), in which the migratory instinct is so strongly marked may yet be a permanent resident in certain districts. This is the case, according to Major Magrath's letter to the "Field," in the Bunnu district of the North-West Frontier Province. This region is a plain, the lowest part of which is 900 feet above sea-level, and it is bordered by hills. The extremes of summer and winter temperatures are great, ranging from a maximum of 125deg. F., to a minimum of 30deg. F., both in the shade. Here our summer bird of passage is content to remain the year through, building in the mud hovels of the villages

Habits of Golden Plovers.

The birds come to the moors in March and scatter out, but if there is severe weather they flock for a time. After April the males get black breasts, and when not feeding their mates they fly in flocks. Before the birds begin to change their plumage they may be shot, not afterwards, as they are nesting. In September the "creepers" are found dodging about, but as soon as they are strong on the wing they flock and go to sea. There are certain places they frequent that are called after them, such as Crossfarnoge, Co. Wexford. About the end of October they go inland to the callows and estuaries of the rivers, where they are joined by the foreigners. Of course they diminish during a series of dry years as the foreigners do not come, while they increase amazingly in a series of wet years.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

(Key to Judges' Initials on page 371 last week.)

The most delightful and appropriate Postcards for Bird Lovers on the Market are those published by "Cage Birds"

UNDER THE WHITE ROSE.

THE Great Horton Good Intent O.S. have issued their syllabus of meetings, lectures, and shows for the next twelve months, and the items therein all deal with very interesting subjects, the lectures being on "The Yorkshire," "Bird diseases and medicines," "Colour feeding," "The Breeding Room," "In-breeding," and "Hints on the Yorkshire Canary," truly an array calculated to attract fanciers. It also embraces a country ramble to Harden Beck, a place well-known to local British bird fanciers as an ideal spot to view wild bird life. Three members' shows are provided.

THE C.M.Y.C.C. annual general meeting, held on Saturday last, was fairly well attended, and a large amount of business was got through. The principal item of interest was the subject of Cinnamon Ticked birds, where should they be shown? Some fanciers were of opinion that they should compete in the regular ticked Yorkshire classes, others that special classes should be provided for them, and still others that they should be ignored altogether. The latter seems somewhat bard. The birds are there in fairly decent quantities, and some provision should be made for them; also they are very useful as breeding birds. If Cinnamon Ticked birds are to be of no use, the C.M. breeders are going to have a lot of "Bacca brass," and in truth they have a lot of that already. Of course, it is a well-known fact that a good typed bird with good markings is a lot harder to breed than a good type of a ticked bird, and those who for years have been trying to get both type and markings should not be beaten by ticked birds that can be secured in one season's breeding.

THE outcome of the meeting and discussion is that the minimum of four classes required at shows at which the patronage of the club is given shall be all Unevenly Marked Classes. The option of making classes for the Ticked Birds is left with the society holding the show, and where two such classes are provided the C.M.Y.C.C. is to take half the loss, if any, on them. Many were for the classes being designated "Cinnamon Marked, etc.", thus allowing even marked birds to complete but this was thrown out, as it was thought it would leave open the door for trimming. At the same time it should not be overlooked that an even-marked bird will be open to similar practices to enable it to be shown in uneven marked classes. Time will prove the wisdom or otherwise of this step by the C.M.Y.C.C., and in my humble opinion it is a step in the right direction.

BRADFORD West C.B.A. had a fairly numerous gathering on Saturday last to hear Mr. J. S. Clarkson, of Halifax, lecture on breeding, etc. Mr. C. can "lay it down," and he does not require any notes, having during his long experience of breeding and exhibiting gained much valuable knowledge, which he freely gives for the benefit of the novices in the Fancy.

MEETINGS of the Societies in the Yorkshire Union, and those of the Specialist clubs, have been pretty numerous lately, and many have clashed with each other. In my idea, if societies would all hold their meetings during the first fortnight in each month, so as to leave the Yorkshire Union and Specialist Club meetings the last fortnight, many fanciers would be able to attend both sets of meetings, instead of, as at present, having to miss one or the other, and the business of the Y.U. would be better dealt with as the Secretary during the last year has been hampered somewhat by the societies who hold their meetings late in the month.

KEIGHLEY Society had a lecture on the "Yorkshire" Canary at their last meeting on March 31st, by Mr. Samuel Dean, of Great Horton. A large company assembled, the room being filled, and the lecturer had the undivided attention of the audience for about an hour. Several questions were asked and answered, the meeting closing with a hearty vote of thanks to the lecturer.

WIBSEY and District O.S. had down on their agenda for Saturday last a discussion on "Cinnamon Marked Yorkshires," the leader being Mr. James Hartley, the noted breeder of this variety. James is keen on Cinnamon Marks, and opened the discussion by giving a retrospect of the winners of the past, after which he discoursed freely upon the question of Cinnamon ticked birds, where they should be shown, whether they should be allowed to compete for the C.M.Y.C.C. trophies, etc. In his opinion they should be shown in the ticked Yorkshire classes. He quoted the wording of the rules of the society, which state: The patronage of the society shall be given where not less than four open classes for Cinnamon Marked Yorkshires are provided (or other words to the same effect). If this was strictly enforced, then the object of the society, as stated in Rule 2, i.e., "The encouragement of the breeding and exhibiting of the Cinnamon Marked Yorkshire Canary," would be carried out. Nowhere in the C.M.Y.C.C. Year Book are ticked birds mentioned, and if the marked birds are to be ousted by the ticked birds, what is the use of breeders trying to get the good markings? The general meeting takes places before very long, and it is hoped by many that this subject will be thoroughly thrashed out by the members. Questions were asked on various topics relative to Cinnamon-Marked breeding, these without exception being ably answered by Mr. Hartley. A hearty vote of thanks for leading the discussion brought an enjoyable and instructive evening to a close.

Y.U. members, and also the members of the Specialist Clubs, are delighted at the offer of Mr. Carl, proprietor of CAGE BIRDS, for the provision of prizes for competition during the next season at shows held under their rules and patronage, the statement that the said prizes are for amateurs only meeting with great acclamation. That they will produce some good competition is certain, and I am sorry I'm not a runner for them.

"STRAIGHT 'UN."

SOME NOTES ON THE ROLLER CANARY.

By J. W. NORRIS.

A Lecture delivered before the City and Suburban A.C.B.

(Discussion continued from page 358.)

Mr. Wynn asked if continual darkness were detrimental to the bird's sight?—No; it is very seldom one sees or hears of a blind Roller. Mr. Curtis: And is that so in the case of Roller Crests?—Just the same. It is said that the Crest came from the Roller in Germany. Mr. Wheller: Is there more colour and more variety than there was in the Roller years ago?—Yes, there is more of the green type, because as a rule the green is a better singer. And I must say that the young birds bred here are larger than the usual run of young birds imported from Germany; which goes to prove that our way of feeding to a large extent is better as regards size.

Mr. Crisp: Do you contend that Canary seed is better than rape seed?—No; but I have not the least doubt that Canary seed helps to make size. If you fed two birds continually on rape-seed you would not get much size out of them. Mr. A. C. Burn: Do you give your birds hemp seed?—Only the young ones. Mr. Curtis asked if the Germans used soaked rape, and the reply was that they did sometimes, but not very often or to any very great extent. Mr. Easterling asked if the lecturer used greenstuff. Mr. Norris: Yes, I give watercress; when I can't get that I give dandelion.

Judging in Germany.

Mr. Wynn: Do you give them anything special to drink just previous to entering for the singing contests?—As a rule simply water is given. I have heard that in Germany, in order to excite the birds so that they should sing, they give a mixed food of some sort. But judges say that exhibitors make a mistake in doing this, because the mixed seed being at the bottom of the cage the bird is down in the seed pans and is too busy to sing. The mode of judging in Germany is to have three judges, and the judging lasts from three to four days. Lotteries are attached to the shows. Each competitor pays 6d., and that entitles him to a share in a lottery. That goes to the funds of the club. I don't think they pay out prize money. The first prize medal, however, is as big round as the palm of my hand. The competitors, of course, pay entrance fees, and their birds are taken out of their cages and put into others.

Mr. Crisp: What is a reasonable price to pay for a Schoolmaster.—At the present time you would have to pay from four to five pounds. The demand for good birds in Germany is greater than in England. They will pay more there, and when they get them they won't let them come out of the country. Mr. Burn: Do you consider that the popularity of the Roller in this country is increasing?—Yes, undoubtedly it is.

Mr. Easterling: Do you ever hear of good birds being sent out to Germany from this country?—No, not yet. But I don't think it will be a great time before we do send them. There is no reason why we should not. Mr. Lissenden said he had heard that America had recently taken a great interest in the Roller. Mr. Norris confirmed this, and stated that it was no uncommon thing for an American to pay £20 for a good bird. Mr. Pullinger: In getting hen Rollers, is there no method by which you can tell whether a hen is a good one?—No, there is no method. Mr. Pullinger: So that you can go down the Row and possibly get a good one for a few shillings?—Yes, with a stroke of luck you might.

In reply to Mr. Wheller, the lecturer said that once a Roller learnt a song he would always sing it. Answering other questions, Mr. Norris said that the best way to get a Roller to open up into song was to get it used to being moved from one place to another. He personally often took one of his birds to business with him, although he was often told to take him home again. (Laughter). By thus travelling a great deal a bird might be depended on to sing anywhere and at almost any time. Mr. Crisp asked the concluding question, which was: Have we a dearth of good Roller Canary judges? Mr. Norris replied in the affirmative; there were plenty of good judges, but unfortunately they were unable to devote the amount of time necessary. With this the meeting was brought to a close, a very pleasant and instructive evening having been spent.

CLUB NOTICES.

One notice of any forthcoming Society meeting inserted free. It should reach us by Tuesday morning's post. Specially printed Club Notice Postcard may be had free on application to our Manager. Secretaries should always use them.

Altrincham C.B.S.—April 21, Victoria Restaurant, 8. Lecture on Yorkshire Canary, by Mr. J. Lindsey.—B. Head.

Birkenhead C.F.A.—April 21, Temperance Rooms, 8. Judges for Old and Young Show; also schedule for Young Show. Fanciers heartily invited.—J. Richardson.

Barnsley and Dist. C.B.S.—April 25, Clarence Hotel, 7.30. To discuss rules and enrol new members.—E. Carlisle.

Bramley and Dist. O.S.—April 18, Club Rooms, 7.30. Impromptu meeting.—L. Craven.

Bradford and County B.B. and M.C.—April 25, Market Tavern, Godwin-st., Bradford, 7. Annual general meeting, business important. Alteration of rules, etc.; fanciers invited; all residents in Yorkshire eligible for membership.—W. R. Myers.

Bradford West C.B.A.—April 18, Red Lion Hotel, Girlington, 8. Union judges.—H. Clegg.

Cardiff and Dist. C.S.—April 23, Maskell's Restaurant, Queen Street, 8. Meeting postponed from 16th to 23rd.—W. S. Negus.

City of Wakefield O.S.—April 18, Crown and Anchor Hotel, 7. Fixing date for British Bird Show.—Parker and Atkinson.

Derby C.B.S.—April 25, Victoria Street Congregational Schoolroom, 7. Alteration of meeting time. Visiting Committees.—W. Stevens.

Gt. Horton Good Intent O.S.—April 25, Church Schools, Southfield Lane, 7. Lecture on the Yorkshire Canary, by Mr. W. Cruise, at 8.

Green Canary Assn.—April 23, Oldham Hall, Renshaw Street, Liverpool, 8. Business important.—S. Hadwin.

Glasgow and Western Counties N.M.B. and B.F.C.—April 25, Table Show, at Headquarters, 122, Ingram Street, Glasgow. Classes: Bullfinch, Lesser-Redpoll, Larger-Redpoll, Twite; and other important business.—A. Malcolmson.

Gt. Harwood and Dist. C.B.A.—April 20, Headquarters, Town Gate, 7.30. To arrange classes for Young Show.—G. Waddington.

Huddersfield O.S.—Postponed from April 20 to April 27, 8. Guarantees for F. F. Show, extended to April 27.—S. Lodge.

Liverpool O.S.—April 21, 24, Shaw Street, 8. Report on Halls, Norwich, Judge suggested, cycle runs, and other important business.—Metcalfe and Hillmen.

L. and P.O.S.—April 23, The Raglan, Aldersgate Street, 8. Table Show of Mules, British and Foreign Birds. All friends welcome.—H. Lambert Brown.

Leicester C.B.S.—Headquarters: Hare and Pheasant Hotel, High Street. April 22, 8.15. Lecture on "The Rearing and Management of Young Birds from the Nest," by Mr. C. Walton; all lovers of Cage Birds heartily invited.—J. A. Tyler.

Llanelly and Dist. C.B.S.—April 24, Bird-in-Hand, 7.30. J. Simon.

Leigh and Dist. C.B.S.—April 21, Railway Hotel, 7.30 p.m. Open discussion.—R. H. Davies.

Musselburgh O.S.—April 25, McDonald's Rooms, 7. Last meeting for new members joining. New members earnestly requested to attend.—David Kay.

Nottingham N.P.O.C.—April 25, 8. Business urgent; at Shoulder at Mutton.—H. Davis.

Plumstead and Woolwich C.B.S.—April 23, Holy Trinity Schools, 8. Lecture by Mr. J. Robson. Canaries and Their Breeding. Friends welcome.—W. Pawley.

Poplar and Dist. C.B.S.—April 30, School Room, Newby Place, at 8 (near the Town Hall, and near Poplar Station, N. London Railway). Mr. C. A. House will lecture; friends cordially invited.—H. W. Cook.

Provincial Roller C.C.—April 25, Swan Hotel, Fountain Street, Manchester. Important Rules, rings, etc. Friends invited.—W. Whittaker.

Rochdale O.C.—April 21, Club Rooms, 7.30. Lecture on Cage Making, by J. Butterworth.—J. Butterworth.

Seaham Harbour and Dist. C.B.B.A.—April 18, Station Hotel, 7.—J. W. Nicholson.

Stockport B.F.A.—April 23, Boar's Head Hotel, 8. General business. Subscriptions due. Hints on Rearing Young Birds, by W. Stafford.—W. Stafford, sec.

Sunderland B.A.—April 25, Summons Meeting, special business; usual meeting room.—J. Copeland.

Tunbridge Wells and Dist. F.A.—April 22, Friendly Society's Hall, 8. Judging Competition.—H. G. Whibley.

Morriston and Dist. C.B.S.—April 25, Woodfield Coffee Tavern, 7.30. Final selection of judges and other important business. Also to enrol new members.—D. Jeremy.

ENGLISH AND WELSH BORDER FANCY CLUB.

Result of season's competition:—Northern Division (cup): Wilson, 111; Poole, 83; Hopper Bro., 63; Lewthwaite, 39; Pennington, 32; Hadwin, 29; Cubby, 29; Thompson, 28; Smart, 22; Hawkins, 17; Wagstaffe, 17; Ellwood, 15; J. Pearson, 14; Bullmore, 12; Drinkwater, 10; Levason, 9; Peans, 9; Waters, 9; Bayley, 9; Walker, 9; J. B. Moore, 7; R. W. Pearson, 7; Blackshaw, 7; Clinch, 6; Bancroft, 6; Beatty, 5; Harrison, 4; Hay, 1; and Woodman, 1. Cash Specials: Wilson, 162; Poole, 92; Hopper Bro., 74; Lewthwaite, 39; Pennington, 39; Cubby, 33; Thompson, 31; Hadwin, 29; Smart, 23; Hawkins, 17; Wagstaffe, 17; Ellwood, 15; J. Pearson, 14; Bullmore, 12; Drinkwater, 10; Levason, 9; Peans, 9; Waters, 9; Bayley, 9; Walker, 9; J. B. Moore, 7; R. W. Pearson, 7; Blackshaw, 7; Clinch, 6; Bancroft, 6; Beatty, 5; Harrison, 4; Hay, 1; and Woodman, 1. Southern Division (cup): D. Jenkins, 117; Brownlie, 110; Sheldon, 52; E. R. Roberts, 38; E. M. Evans, 26; Tidstone, 24; A. J. L. Taylor, 15; W. J. Jenkins, 15; O. Connell, 14; Bowes, 12; Phil Jenkins, 6; and Cunningham, 2. Cash Specials: D. Jenkins, 180; Brownlie, 168; Sheldon, 54; E. R. Roberts, 12; E. M. Evans, 28; A. J. L. Taylor, 15; W. J. Jenkins, 15; O. Connell, 14; Bowes, 12; P. Jenkins, 6; and Cunningham, 2. International Contest: Poole, 20; Cubby, 17; Thompson, 15; Hawkins, 12; Walker, 8; Hadwin, 6; Waters, 6; J. Pearson, 5; Pennington, 4; Hopper Bros., 2; and Woodman, 1. Will members please check these figures, and if incorrect communicate with the secretary? Novices at the commencement of the season (see Rule 13) please write secretary at once. The secretary very much regrets having to make a further appeal to the members for funds to enable him to pay out specials and to purchase cups. Show Committees wishing for the Society's patronage will please communicate with the secretary before July 20, after which patronage will be given out. Will all new and old members please forward subscriptions (2s. 6d.), so that their names can go on the voting papers which will shortly be issued? Rules, standards, and all particulars may be obtained from the secretary, S. HADWIN, 28, Pembroke-place, Liverpool.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

Queries will be answered under the following conditions:—

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Canaries.—**Claude St. John.** British Birds, Mules and Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c., Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S. M.B.O.U., &c. Wild Bird Life **H. Norman.**

NOTE.—If an answer is required concerning the proper mating, etc. of Norwich, Yorkshires, Crests, Cinnamons, Greens, Borders, Lizards, Scotch or any other variety of the Canary family, we shall, should the querist desire us to do so, be pleased to submit his question for answer to some leading specialist of the day on the variety concerned.

CANARY QUERIES.

Answered by CLAUDE ST. JOHN.

Bird Better; Size of Aviary.

F.S.C.—Am very glad to know the bird is better already. Persevere with the treatment until it is quite well, and do not try to mate the bird for some little time after it appears quite well. Allow it an interval in which to lay in some reserve strength. As regards the size of aviary in which to keep 20 to 30 Canaries, you do not say whether it is to be in or out of doors, nor whether the birds are wanted to breed, and these are all-important factors to be reckoned with. In a general way, you may take it that the space required in any aviary, whether indoors or outdoors, should not be less than one square foot of floor space for each bird the size of a Canary. Thus, if you had an aviary twelve feet long by three feet wide, its maximum accommodation would be 36 birds. Height is of no account at all; floor space is of prime importance. This calculation is for birds that are not intended to breed. If you wish to breed with them, then at least two-thirds of the number given would have to be discarded. Doubtless CAGE BIRDS' latest handbook on "Aviaries" would prove helpful to you. The best position for an outdoor aviary would also depend solely upon the surroundings. Other points being equal, you should aim at getting an aspect facing south-east, south, or south-west, with good shelter from rains and winds on the west, north, and north-east.

Ought She to Breed?

No Name.—As the bird has not yet reproduced any of the feathers around the neck, the probability is that she will not do so until autumn. Meantime, continue to feed and treat her as advised, and as she is anxious to nest you may allow her to breed, and continue doing so until the middle or end of August, and the process of incubation will very likely help a good deal towards throwing the bird into a healthy and normal moult. To assist her in reproducing the plumage perfectly, as soon as she drops into moult give her plenty of tepid baths, and keep her in a warm and rather moist temperature. Of course, you will have to guard against chills very carefully.

Nothing Came of it.

G.R.B.—Your birds acted just as I should have expected. You paired the birds when the hen was in just fair breeding condition, and the cock totally out of condition. Result: the hen builds a nest, but all her tempting wiles fail to rouse the cock to the same way of thinking as herself, and so matters come to a standstill. The hen does not lay; you remove the cock. After a time the cock gets in "a better state," as you put it; in other words, he begins to come into breeding condition. Then you replace him with the hen, and she forthwith sets to and destroys the nest—presumably the one she built before the cock was taken away from her. This is just what you might have expected, and may serve as an object-lesson for other novices. When the cock was removed, the desire for nesting in the hen was arrested, and when he was returned, the hen, being still in good condition, sets about nesting again, and, naturally, makes a new start from the beginning; consequently, the first step she takes is to pull out the old nest in order to start building a new one. Now, what you should have done in the first instance was to have kept the birds separate until the cock was in the proper condition, and as anxious to begin nesting as the hen. Next, when you found he was useless for breeding, and the hen did not lay, you did quite right to separate them and feed up the cock until he was in good, vigorous condition. But when you removed him you should also have taken away the nest, but not the nest-box, and all nesting material, and given fresh material again in a day or two after the cock was returned just the same as you would to a pair of birds which had been put together for the first time. If the cock is really in good order now, they will probably soon settle down to work.

An Injured Leg.

J. Turner.—I am inclined to think your bird which went lame and left the nest the day after she started to sit closely, and now sits quietly, holding up its foot unless it is disturbed, but seems otherwise in good health, has got its foot or leg injured in some way in the nest. It may have got a piece of strong hair, or a thread of cotton twisted around its foot, and this may have given its leg a nasty wrench as it attempted to leave the nest. It is not improbable the leg may be broken near the joint, but even if it is, seeing that the bird holds it up in a good position, you could not do better than leave it entirely alone, and keep the bird very quiet until it begins to use its leg freely again. Place its seed and water conveniently so that it does not have to strain after them, and give a few grains of Epsom salts now and again to keep the blood cool. The eggs are probably spoilt. Unless you have a sufficient number of hens just beginning to sit to give one of the eggs to each as an addition to its own clutch, I would not advise you to trouble about them any further. You should remove the cock until the foot is recovered.

Still Moulting.

G.B.—You must have been keeping the bird in a damp or draughty situation for it to have been moulting for the last six months, and not be finished yet. Your diet also is not sufficiently nourishing under the circumstances. Keep the bird fairly warm and in a regular temperature, and see that it is fully protected from chills and draughts. Give tepid baths, but only during mild bright weather. As a staple diet give a mixture of three parts Canary to one part summer rape, and every second day give a few grains of either hemp or linseed, first one and then the other, but not both on the same day, and on the intervening days, when not giving either of these extra seeds, give a small piece of stale sponge cake slightly moistened with sherry wine. In the drinking water give fifteen drops of chemical food daily for a week, and during the second week omit the chemical food every second day, and give instead five drops of tincture of steel. If by that time the feathers have ceased dropping out, you may begin to gradually drop off all these extra items. But if they have not quite stopped continue the same feeding, and begin with the chemical food daily again and repeat the two weeks' course. Give a little green food daily all along—dandelion or chickweed preferably.

Breeding Queries.

Jimmy McDermott.—1. "How are cinnamon-marked birds bred?" This is the whole sum and substance of your first query. If you mean, how are they originated? it is by mating the cinnamon variety with the one upon which the cinnamon markings are desired. On the other hand, if you wish to know how you can breed cinnamon-marked birds you need not go this roundabout way to do it, as there exists plenty of material ready made for the purpose. You need only use cinnamon-marked birds to breed with, or birds with cinnamon markings and clear ones with pink eyes; the pink eye showing the presence of cinnamon blood in the bird possessing it. 2. The only way by which you can hope to breed greens from the Yellow Yorkshire hen described is to mate her to a self green cock. Even then you must not expect a large proportion of the progeny to be self greens. 3. If you mate her to a self green cock the vast majority of the young will be variegated and broken greens, with probably a few ticked specimens, now and then a clear with dark flue, and an occasional self green. Of course, you must not take this as an infallible rule, as much depends upon how the parents of the hen were bred, and also upon the parentage of the green bird, but it is what you must expect to get in all ordinary cases.

Breeding Too Fast.

Wheatsheaf.—As you have already tried removing the cocks without any effect on checking your hens of the desire to go to nest again when the young are ten or twelve days old, I doubt the practicability of giving them anything to try to stop them wishing to breed. You had better look to the cause and try to prevent it from that direction. The warmth of your kitchen may be an exciting cause of it, and again you may give your egg-food too strong. When you removed the cocks did you still keep them near the hens, where the latter could hear and see them? If you did that would be almost as bad as leaving them together. With hens so fast as yours you should take them quite out of sight, and, if possible, out of earshot. After the young are five days old begin to gradually weaken the egg-food, and bring it to three parts bread crumb or biscuit powder to one part egg; give a regular supply of soaked rape, but limit the quantity of cracked hemp. Do not give dandelion at all, but plenty of lettuce, chickweed, and watercress. If the hens appear to be getting fresh when the young are eight to ten days old, give enough Epsom salts in the water to make it taste of it a little, and let them have this water for four of five hours during the middle of the day. Give fresh water during the afternoon and morning. Repeat the dose, if necessary, after an interval of one day.

Who's the Culprit?

G.M.D.—There may be several causes for the eggs disappearing from your nests and only the yolk being found at the bottom of nest. There may be a plague of red-mites which keep the hen constantly disturbed, and she breaks the eggs accidentally, the shells being afterwards carried out of the nest on the feathers of the bird, or eaten. Or it may be that the cock is in too high condition; as one of them is constantly pulling the nest about this seems probable. In this case you could not do better than remove the cock as soon as the hen begins to sit, and either mate him to another hen or keep him in a separate cage, leaving the hen to hatch and rear by herself. Thirdly, and this view I am rather inclined to take of your case, the nests may be rifled by mice. Keep a sharp look-out and try to ascertain if this is the cause. If it is, the remedy is obvious: nothing but total extermination of the pest will be of any use. This latter remark would also apply to the first suggested cause. You did quite right to place the two eggs you saved from one nest under another hen—I am assuming that you took the precaution to select a hen for the purpose whose eggs were at about the same stage of incubation, so as to prevent any great disparity in the ages of the young when all are hatched out.

Making No Progress.

G.L.—As you say you were very successful with this pair of birds last year, I think the reason why the hen makes no attempt to begin nesting now you have mated her is that you worked her a little too hard last year. You would have done better to have kept her un-mated until the middle of April, or even towards the end of that month, and fed her up meanwhile. By doing this you would have been just about as forward as you now are, and the hen would have made a better start when mated. As the birds do not quarrel, you may now leave them together, and practise that great virtue—patience—for a little time. After your feeding as follows, and the hen will probably get fresher in a short time. Instead of giving a pinch of rape only twice a week, give a teaspoonful of a mixture of equal parts of hemp and rape to the two birds twice a week. Instead of maw, give a pinch of inga with a sprinkling of gold of pleasure twice a week. For green food give a leaf of dandelion to each bird every day, and twice each week substitute a teaspoonful of crumbs of stale sponge cake for the egg-food. Every third day until the hen begins to get fresh you may add twenty drops of sherry and five of tincture of steel to the water.

Shell-less Eggs, Progeny, etc.

G.B., Harringay.—The cause of the hen laying two shell-less eggs, although apparently in the best of health and condition, may be over-feeding. You say she has plenty of sand and cuttlefish, but you must not overlook the adage about one man taking a horse to the water, etc. Perhaps she does not touch it. Try crushing up a bit of old mortar into powder and strewing it on the cage bottom, then throw in a few grains of inga. Also scrape a little cuttlefish and mix with the egg-food, together with a pinch of maw seed, and add twenty drops of chemical food to the water daily whilst the hen is going to nest. As to whether the progeny of a Roller hen and a Yorkshire cock will take the Roller or Yorkshire song depends entirely upon which bird they are trained under. If they only hear the Yorkshire cock they will only sing the Yorkshire song, or, which is practically the same thing, the song of an ordinary untrained Canary; if they are placed under a Roller cock the song will probably be that of a common German Canary.

Laid on the Floor.

A.R.W.—The fact that two of your three hens totally ignored both the nest pan and nesting material, and laid their eggs on the floor, whilst the third put only a small amount of material in the nest pan and also laid her eggs on the floor, seems to make it clear that there was something about the pans which the hens did not approve of. Perhaps the position or fixing of them was at fault. Some hens are extremely whimsical in selecting a site for the nest, and if you watch them closely after they are mated you may soon discover if they select a different site to the one you have provided, and then you can remove the nest pan into that place. This is generally the best way out of the difficulty. In your case I should say the upper part of the cage was too exposed for them, and they probably hit upon a corner of the cage bottom as the correct thing. In such a case you should have used the square wooden nest box, and stood them on the bottom of the cage in the chosen spot, and the birds would probably have gone on nesting in the proper way. You need not separate the birds. Let them go on until they are getting ready to begin nesting again, then put some light cover over the cage front just in front of the nest pans to make them a little more secluded, and keep your eye on them to see if they are satisfied with the arrangement or wish some other site—if they choose some other site let them have it.

Cock Bird Still Moulting.

C.H.M., Nottingham.—The fire in your kitchen being out at night doubtless makes the temperature very variable, which might be the cause of the prolonged moult. Keep the bird where the temperature is fairly equable day and night, but see it is quite free from chills and draughts. Give only tepid baths, and those only on mild bright days. Every second day give a bit of stale sponge cake with a few drops of sherry on it, and a dandelion leaf every day; otherwise, continue to feed as you are now doing. In the drinking water give twenty drops of chemical food one day, and five drops of tincture of steel the next, and continue to give these alternately until the feathers cease dropping out. Give the chemical food on the days when you are not giving sponge cake. Do not mate the bird until it is perfectly recovered from moulting; if you do, the probability is that you will get only clear eggs.

Song Still Weak.

"Nancy."—It is doubtful whether the Roller will ever regain his full powers of song, but he will certainly sing again when the weather gets warmer. All you can do is to guard carefully against any more chills. Give only tepid baths, and these only when the weather is mild and bright. Give him a crumb of sponge cake, with a few drops of sherry on it twice a week, and three times a week give him the following decoction to drink instead of water, letting him have it for one full day each time. Place half a teaspoonful of linseed, as much chlorate of potash as will cover a sixpence, and a piece of liquorice extract the size of a small pea in a teacup, and half fill the cup with boiling water; stir it, and place a saucer over it to allow it to infuse; and allow it to stand until cold. Then well stir it, and strain off sufficient to fill the bird's drinker.

Not Laid Yet.

"South Devon."—The reason No. 1 hen wanted to go to nest in March, and when mated built a nest and sit in it, but has not yet laid, is that she is probably one of those giddy little things who only raise one's hopes to shatter them again. Separate her for a time, and give for a day or two as much Epsom salts as will cover a threepenny piece, and after that give a little egg food three times a week, a small piece of niger on each of the intervening days, and a leaf of dandelion daily. A fortnight of this treatment may bring her round, and after that time if she is anxious to mate, put her up with a lusty cock who is in good trim.

Not in Condition.

Roller.—It is quite useless attempting to mate the birds until they are in a much better condition. For one day give the hen that breathes heavily as much Epsom salts as will cover a sixpence. Then for a few days give twenty drops of whiskey, ten of glycerine, and ten of syrup of squills in the drinking water. Continue this until the breathing is better. Every second day give a teaspoonful of crumbs of stale sponge cake between the two birds, and on the alternate days give the hen a pinch of niger and gold of pleasure seeds mixed, and the cock a pinch of gold of pleasure and hemp seed. Give two leaves of dandelion to each bird daily, and for one week give twenty drops of chemical food in the water every second day, and on the intervening days five drops of tincture of steel.

Powdery Substance.

Crest Fancier.—Have you carefully examined this powdery substance which comes off the birds? I strongly suspect it is a bad attack of grey lice. Ascertain whether this is so or not, and if it is, supply a tepid bath daily in which a little essence of quassia has been mixed. If this surmise is not correct, you would do well to hand-wash the bird and mix a little borax with the lather, and add a teaspoonful of Jayes' Fluid to a pint of the washing water in the first two basins. Afterwards add a piece of sulphate of soda the size of a small pea to the drinking water, and also ten drops of lemon juice. You should be giving a little mixed seed and a teaspoonful of egg food each twice a week, and add a little green food daily now. You do not say how or from what part the feathers have come off.

Brevities.

Mopy and Gaping (Frank Howell).—I suspect the fire is allowed to go out at night, and as the bird hangs near it it is subjected to extreme fluctuations of heat. This would quite account for its condition. Hang him where the heat will be fairly regular at all times, even if it is not quite so warm, but be careful to see that there is no cold draught to get to him. Give tepid baths only, and these on mild, bright days. Feed on a mixture of two parts Canary and one part summer rape seed as a staple. Give a spray of watercress or leaf of dandelion daily, and every second day a small piece of sponge cake with a few drops of sherry on it, and on alternate days give twenty drops of whiskey, and ten each of glycerine and syrup of squills in the drinking water.

Stamping Canaries' Wings (C.T.P.).—You would run a very great risk of having your birds passed, even if they were not disqualified, if you stamped the young birds' wings. You might mark them with a rubber stamp and indelible ink if you did not intend showing them in nest-feather classes, and were going to "flight" them—always an objectionable practice—at the moulting season, but not otherwise. Marking rings are far the best and safest system of marking you can adopt for all birds you intend to exhibit, or, in fact, for all birds: or you can, if you so desire, use the rings, which can be moved and replaced at will.

Hen Caught Chill (Tom).—Give twenty drops of whiskey and ten of glycerine in the water for two or three days, and for a day or two give a teaspoonful of crumbs of stale sponge cake slightly moistened with a few drops of sherry, and if you also guard against chills and withhold the bath for a little time you will get the hen all right without separating her or stopping her breeding at all. It will not hurt the cock to have the same treatment. You are giving too much egg-food. Cut it down to a teaspoonful twice, or three times at most, a week.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

A Trio.

Signalman.—1. The beak of the Greenfinch does not change colour. Your bird may certainly breed Mules if kept in a very quiet spot. Put him beside the hen, a wire partition between them, and when he feeds her through the wires, and sings to her, then, if she is ready, you can safely run the two together. 2. It is certainly not too early to mate up a Linnet, for this bird is often in breeding trim (apparently your own is) very early. 3. Here is the recipe for making bird lime. It was given by a correspondent some time ago (have never made it myself): Take one pint of best raw linseed oil, put into an old quart saucepan, put on the fire and simmer gently for three or four hours. On no account let it boil; stir every few minutes. No change will be noticed until after the second hour, then it will show froth on top, this being a sign of thickening. It must be given every attention, or it will boil over. When it gets about as thick as treacle, take it off the fire and pour into a pan of cold water; stand till cool, then work it up with the hands till it shows no signs of having water in it. This will be found to work on twigs quite easily. It can be taken off when not in use, and used over and over again. If too stiff, mix with it a little of the so-called "treacle." Boiling will thicken it if needed. Made properly this will hold anything from a Wren to a Blackbird. An outhouse is more suitable for the boiling purpose than the kitchen, as the preparation has a very sickly odour.

Canary-Bullfinch Couple.

Bullfinch.—The feeding of young mules is dealt with in another reply this week (see also reply to "Novice" last week), as is also the feeding of Goldfinch-Canary couples. For the Canary-Bullfinch couple, give us a stock food: Canary and teazle three pints of each, charlock and summer rape one pint each, linseed half-a-pint. Vary this with daily feeds of (1) sunflower seed (lightly cracked) and hemp; (2) niger and maw seeds mixed in equal parts; (3) a good wild seed mixture; (4) a good maker's packet Finch mixture, not giving them all at once, of course. Thistle, teazle and hardheads, if you have them, may be given, while dandelion, shepherd's purse, chickweed and groundsel (especially flowering and seedy) should be given freely. A dietary such as this will suit all Hybrid couples, especially those with a Bullio hen as one of the partners.

Greenfinch Canary Muling Couple

Alpha.—The stock mixture you should use is: Canary and teazle two pints each, white sunflower, safflower, summer rape, charlock and linseed half-pint each. Also use the following. (1) hemp two parts, niger and maw one part each, (2) a good wild seed mixture, to which has been added a dash of thistle and dandelion. Give a teaspoonful of these on alternate days. A very important point is that you should look out for the young dandelion leaves, and gather a daily feed; also for seeding chickweed (obtainable practically all the year round in suitable sheltered spots), shepherd's purse and groundsel. These spring "salads" are invaluable aids in bringing all the Finches into proper breeding trim—especially the flowering and seeding dandelion heads. The earlier you get the latter, the better your chances.

Mule Breeding.

Beginner.—I hope you will succeed in breeding "clear Mules," but don't be disappointed if they turn out very much the reverse. It is not good to begin with a black-legged Goldfinch which is very wild, and "nearly always on the cage front." That is not the sort of Finch I should choose for my own

use. It is certainly no use pairing it up until it is in full song. Are you sure you have a cock bird? The Goldfinch has a pretty song, and a good bird sings freely all day long. As regards mating him (if a cock) and the yellow hen Canary, the simplest and most straightforward procedure is that I am always recommending, viz., to get a two-compartment breeding cage, and run the hen in one half and the cock in the other, the wired slide being between them. When the hen shows a desire to go to nest, hang in the nest-box, give a supply of nesting material, and draw out the dividing slide. You can, if you choose, give the birds a run together for a time daily before leaving them finally together. Sometimes, however, if one should happen to be ardent and the other not yet properly heated by "love's fire," this leads to the former experiencing disappointment. The result, sad to say, is usually a fight. The procedure when Mule-breeding is practically the same as when Canary-breeding, and you should most certainly invest in a book dealing with the latter, and carefully study the instructions given therein for the mating of birds, and for the management and feeding of young. There can be no "exact date" for pairing any breeding couples. Breeders have to settle the point for themselves, being guided by the state of their birds. You will find plenty of signs to help you. When the cock begins to take an interest in the hen he will be found feeding her through the wires of the sliding division; he will also serenade her in most vigorous tones. She, on her part, will accept his offerings of fodder, and as the pairing fever fills her veins, will "bounce" from perch to perch, flapping her wings, and "calling" in a high-pitched voice. One of the best things to do, however, when an understanding seems on the verge of being arrived at between any given couple, is to keep a sprig or two of nesting material in the lady's side of the house. When she begins to carry this about in her beak, and to look for a suitable place in which to deposit it, put in the nest-pan, and pull out the slide. Afterwards you must be guided by what happens between them. Should the cock bird interfere with the nest, only let him run with the hen a few hours daily, say in the morning, and shut him off entirely after the third egg has been laid.

Management of Siberian Goldfinch.

H.S.B.—I can only repeat the full details of my own methods, which I have often given before. You will find the mixture I recommend much better than the one of which you send a sample. As regards "pairing up," see other replies this week. A good stock mixture now would be hemp, canary and teazle three pints each, linseed half a pint, summer rape and charlock not quite a quarter-pint of each. Give a little maw and niger frequently, also a good feed of white sunflower seeds (cracked if necessary)—not all at one time, of course, but one or other daily. When newly-imported, I add two pints of niger (or inga) seed to the above stock mixture. Thistles, hard-heads, dandelion, flowering groundsel and chickweed, with seeds, etc., are all good for them, and appreciated. Many Siberians are lost through wrong treatment when first bought, owing to the unfortunate inexperience of the buyer. They are immediately put in a cage with food and water hung outside, consequently they starve or die of thirst, never before having seen a water-hole, much more put their head through one. Food and water should always be put inside to them, and it should be seen they get at the same. Inga (niger) seed is their staple food during importation. When they have got the taste for sunflower seed (it comes quickly, for they are very fond of it, and it is a grand food for them) gradually wean them off the niger. Should a bird seem to droop at any time, give at once a dose (two, if necessary) of sulphate of soda for one day; as much as just covers a shilling, dissolved in two tablespoonfuls of water. Follow this with a course of citrate of iron as a tonic, a tiny pinch (just a few granules) dissolved in the same quantity of water. Watch its effects on the bowels; it is constipating when given too strongly. Also, don't give grit freely at first. They will simply "gorge" it; and then comes trouble.

Wild Seed Mixture.

P.M.—The residue from a thrashing machine is good to offer any British seed-eaters, especially a collection in an aviary. Your own "wild seed" is a very fair sample of such residue. Its value is only small; you will see from our advertisement columns the prices at which others offer it for sale. The up-to-date vendor, however, mixes thistle, gold-of-pleasure, dandelion, etc., seeds with it, thus much enhancing its value to the buyer. The only possible way to name every weed which contributes its quota to such a mixture would be by sowing some of the seed and identifying the plants produced by it. The bulk is the produce of the group of plants termed Brassicas (charlock is one) known as "bird rapes," and many of the seeds of these plants are not to be differentiated by even the expert in such matters. As I am only very much a novice in the science of botany, you will forgive me, I am sure, "turning down" the job.

Nightingale Cage and Seed Husks.

Airship.—A Nightingale does not thrive well in a small cage, and if your space is too limited to permit its being a fairly large one, you had better give up your idea. Your other query I cannot answer, and doubtless the Editor will propound it in the correspondence columns, for you, when some reader or other may be able to supply the desired information. I always blow the husks from off the top of my own seed-hoppers, and the seed-drawers in my cages. It affords excellent exercise for the lungs, and the muscles of the arms are exercised in equally excellent manner afterwards, in the sweeping up of the husks from the floor, so that I may not trample them about the house, and by doing so bring upon my head the wrath of my "better half."

Brevities.

Identity of Bird (Puzzled, H. L.).—The bird you describe is the Reed Bunting, sometimes termed the Reed Sparrow.

"Hardiest and Best Songster" (Song-Loving Novice).—You name four birds, and ask me which is the "hardiest and best as a good cage songster." After grave deliberation, I place them as follows: Skylark, Blackcap, Pekin Robin, Nightingale. The low position of the latter bird is due to the fact that so many turn out so disappointing in a cage, considered from the song point of view. The Skylark sings all the year round (excepting only, of course, during the moult), when properly kept.

A Sex Puzzle (R.E.B.).—You say that an "expert" has seen the two Greenfinches, and been unable to "come to a decision" with regard to their sex. How, then, is poor me to do so, with only be given when tainted with frost.

written words to go upon? To hazard a guess (it may be a shocking bad one). I should say the small Greenie is a cock, and the larger one a hen. Cock British birds will certainly feed and "fuss about" each other when under the influence of amatory passion, so to speak.

Only One Wing (C.B.).—Really, I have never tried to breed with a Goldfinch having only one wing, so cannot offer any definite opinion. I prefer "whole" birds myself. I don't see why you should not let the couple go ahead, however, seeing how friendly they are, providing you will not feel too much disappointed should the eggs prove clear. Glad to hear of your success last year when following my advice.

Muling Matters (Collier).—Sometimes muling hens take no notice of a cock Canary which is in the same room (especially if he is mated up), but sometimes they "fall in love" with his voice, and then refuse to have anything to do with the British Finch, often attacking him savagely. Muling Finches don't want drugs to bring them into condition; feed as advised other querists this week.

A Hard Lump (A Subscriber).—The only likely treatment I know of is to touch the lump daily with a camel-hair pencil brush dipped in tincture of iodine. The latter is very powerful stuff, and should be very carefully used (only a slight smear of it), while it should be kept off surrounding parts (the eye, etc., in particular).

Starling's Voice (J.B.).—Crush up a chlorate of potash lozenge and dissolve half of it in two tablespoonfuls of drinking water. Repeat this for three days, and give on alternate days afterwards (plain water in between) for a short time if necessary. I think this will restore the Starling's voice. Keep him out of draughts.

In an Aviary (W. Vowles).—The aviary looks a very likely one to breed a few Mules in. As it is very small, however, you would be wise to have only Canary hens in it. You could turn in three or four more hen Canaries, and, if you like, a cock Goldfinch (or another cock Linnet). For feeding, see other replies this week. The hen Greenlinch might quite likely never bring up any young to maturity.

A Pairing Matter (A Beginner).—The way to go about it is to remove the cock Canary when the hen Canary starts to sit (out of the room, if possible), and let her rear the young herself. When the young are out of the nest, and just about able to "do for" themselves, then introduce the cock Goldfinch. The Goldie and hen Canary can be allowed to see each other (to become "acquainted") some little time previously, of course. He can be in one half of the breeding cage towards the latter end of the time—about the period the young are ready to transfer to a nursery cage.

Breeding from a Mule (Horace Wright).—I can only say as I have often said before, that it has never been satisfactorily established yet that a Mule has bred. Whether it ever will be, is a point I prefer to pass no opinion upon here. I have a perfectly open mind (despite personal failure), and if you mate your Mule up, and get any youngsters, I shall be most pleased to hear of it.

Opinion on Thrush (W.G.).—I am afraid there is no room left for reasonable doubt: the bird is a hen. A last year's bird (hand-reared) would, if a male, have come into song long ago on the treatment you describe. So far as plumage and general appearance go, cock and hen Song Thrush are as like as two peas.

Redpolls and Teazle Seed (Sample).— 1. Both cock and hen Redpolls carry the red tint on the head, but when in full colour in the wild state the cock has the breast suffused with rosy-red also, whereas the hen has not. 2. The sample of teazle looks like excellent seed. I prefer it a shade darker in colour, but this cannot always be secured.

Thistle-seed and Cocoanut Fibre.—Hardbill).—The thistle-seed you enclose is not the right kind to give to birds, and you will be foolish if you offer it to any of yours. The "small, cream-coloured seed" (as you describe it) is the correct sort of thistle seed. Will you let me know from whom you bought this? 2. It is cocoanut-fibre that so many fanciers use at the bottom of show-cages (especially for Softbills), and this may be bought at any good florists, or shop where garden seeds and the like are sold.

A Breeding Question (Novice, J.V.).—The bird may be merely a Canary with more or less dark plumage about it, as such are thought by many people to be "Mule-Canaries." Of course, it may also be really a Linnet Mule. One could only tell for certain by seeing it. As regards Mules breeding, see another reply this week. The hen Canary may have been carrying fertilised ovum (or eggs) when she passed into your possession. Pity you don't know some experienced fancier you could ask to look at the birds. Ten years is a very big age for a Canary, or similar small bird, to begin breeding at.

A Variety (P. Farrer).—1. The smell of paint, if at all strong, is certainly injurious to birds. (2) The food of Siberian Goldfinches is dealt with in another reply this week, as also is (3) the rearing of Mules for the nest. Many of my Siberian Goldfinches eat a small mealworm now and again with great relish. I always clear out the cages of my hen Canaries when they are sitting, doing it as quietly and unobtrusively as possible.

Linnet and Canary (Limtot).—Pairing matters are dealt with in another reply this week. The "fondling of beaks" through the wires of the partition is a sign the couple are arriving at an understanding.

Siberian Goldfinch (D. A. J.).—The feeding of Siberian Goldfinches is dealt with at length in reply to "H. S. B." this week. Canary, linseed, and summer rape make but a poor mixture for them to thrive on. There is no reason why a this year's bird should not Mule successfully; anyway, I am using two or three myself.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Food for Budgerigars.

Miss Knowles.—Treat your bird as follows:—Diet, canary, millet, and spray millet, greenfood, as much grass in flower as it will eat, and a few crushed oats, cuttlefish and water. Do not give bread and milk; the bird does not need such, and is better without it, the diet advised above being ample when the bird has recovered its plumage. Till this takes place soak a piece of household bread in clear water, and after squeezing out all the water you can, well dust it with flour of sulphur; give this daily. Also add sufficient Parrish's Chemical Food to its drinking water to make it the colour of pale port wine. If the bird will eat it, a little ripe apple, orange, etc., may be given, and will be a wholesome change. Give it as much grass in flower (grass in the ear) as you can get, or it will eat, as this is their natural food. It must not

Birds for Indoor Aviary.

Inquirer.—It all depends for what purpose you require them; if for breeding no more than three pairs, only two pairs would be better. 1: One pair each Zebrafinches, Norwich Canaries and Bengales. 2: Two hen Norwich Canaries, 1 cock each Grey and Green Singing Finches, and one pair White Java Sparrows. 3: One pair each Cutthroats, Silverbills and White Java Sparrows. If breeding is not an object, then you could keep the series given below; providing strict attention is paid to cleanliness, the aviary well furnished with twiggy branches and seed hoppers so arranged that contents cannot be fouled. Pairs each of Avadavats, Green Avadavats, Zebra, Grey and Orange-cheeked Waxbills, and odd males. Gouldian, Alario and Green Singing Finches, Norwich Canary and Silverbill. Diet: Canary, millet, and spray millet, greenfood, such as fresh lettuce, grass in flower, chickweed, etc., a few ants' eggs, and if obtainable, sprays from rose and fruit trees and hedgerow herbage, that are infested with green fly. The bottom of aviary should be covered with gritty sand, on top of which should be scattered cuttlefish that has been crushed to the size of millet seed. The aviary should have a light, sunny position where it will get plenty of fresh air, yet where the birds will not be subjected to draught or the wind blowing direct into the aviary or aviary cage.

Madagascar Weavers, etc.

G. E. H.—1: No; the male will thrive well enough as a bachelor. I have one among Budgerigars, etc., which appears quite happy in living his own little life, and ignores completely the other occupants of the aviary. 2: You would be more likely to succeed better if you had males of other species, but with the Madagascar I never had any trouble and have had two odd cocks agree well together in a moderate sized outdoor aviary. My experience with Weavers in captivity has been, that the males practically ignore the females and very seldom is a serious attempt at nesting made, most of the species spending the bulk of their time in weaving toy nests all over the aviary. 3: Weavers, though they do well enough without live insects for a time certainly should get a little of this kind of food, especially during the period of the moult and seasonal change of plumage. 4: Within the space of your aviary I should not anticipate any trouble from the introduction of two more cocks. They may chase one another about a bit, but if you have your aviary well furnished with twiggy branches in the various corners and along the back, nothing more serious should result. But there is as much individualism with birds as there is with people, and no hard and fast rule can be laid down.

Grey Parrot and Sunflower Seed.

W. P. C.—Probably it may be nothing more than the moult with your bird, but for its dietary to consist largely of sunflower seed is most certainly not right and will lead to trouble later. I am glad to note the previous trouble has been got rid of, and I should advise at present making its drinking water just saline with Epsom salts for one day only, and repeat the dose after an interval of three or four days. Do not leave the water in its cage, but let it have a fair drink three or four times a day. Diet: With the exception of the seed mixture, your diet is fairly correct; as it will not eat canary seed, let it have the following: Dari, oats, wheat, maize, hemp and sunflower seed in equal parts. Fill up its hopper in the morning and do not give any more seed till the following day, and then do not throw away the leavings; remove any refuse there may be among it, and then fill up with fresh seed; you will of course give the ripe fruit, etc., as usual. It had better be on short commons for a few days; than get such an excess of sunflower seed. Well colour its drinking water with Parrish's Chemical Food for the next month or longer.

Pintailed Nonpariel's Food.

W. R. White.—Diet: Canary seed, white and spray millet, oats, paddy rice (rice in the husk), greenfood, such as fresh lettuce, grass in flower, etc., and if they will eat them I should give them a couple of mealworms each daily, and as soon as they are obtainable a few small spiders and green fly from hedgerow or garden. Opinions vary, but I always prefer a box cage to any other, as this type provides better protection against draught and also supplies a little seclusion for the birds. The roomier your convenience permits you to make it, the better for the birds. A good size is 2 ft. by 1 ft. by 1½ ft. high; such a cage furnished with twiggy branches for perches at either end should enable you to enjoy the birds as you never could in a cage, which merely enabled them to hop from one perch to another. The temperature of an ordinary living-room would be ample, but wherever you keep them see that they get fresh air and are not subjected to draught.

Breeding Cutthroats.

Ignorant.—The hen Cutthroat resembles the male save that she is not quite so warm a colour, and lacks the scarlet band across the throat and the chocolate-coloured patch on centre of abdomen. You evidently have a true pair, and should succeed in getting them to breed. They should do so in an ordinary breeding cage, but the larger it is the more probable are your chances of success. As regards nesting receptacles, if you can obtain one, get one of the Hartz travelling cages, remove the fittings, and cut out two of the bars for entrance, supply them with hay rubbish and a Canary nest bag, and leave them to themselves, and in due course you should have a brood of young Cutthroats. When they are feeding young supply them with ants' eggs (cocoons) and soft food. Several good soft food mixtures are advertised in our columns.

Foreign Birds in Cages.

Theta.—In respect to your large cage, you have already too many birds in it as it is, but as they are doing well, and you keep them clean, it is a pity to disturb them, but you ought to supply a few oats for the Java Sparrows, and I conclude you are supplying greenfood, grit, and keep a piece of clean cuttlefish in the cage. Your square cages are too small except for the Waxbills, and these would be better in one a little larger. The disease the majority of cage birds die of is lack of space and exercise. There is no cage like a box cage for keeping birds in, and to my mind a plain well-made box cage, stained black outside and pale sage-green inside is fully as handsome, if not more so, than a fancy wire cage. The Pekins, Lovebirds, and also the Waxbills, would be better in box cages of a minimum size of 18 inches long, by 12 inches deep and high. In such cages such birds as White Java Sparrows, Bengalese, Zebrafinches, and Cutthroats, would be very probable breeding. The Pekin should get a liberal supply of ripe fruit as well as the soft food, and also two or three mealworms or other insects daily.

Amazon with Sore Mouth.

J. H. While the bird's mouth is sore I should give it some boiled maize daily. This should be of much assistance to it, but you must note that this soon turns sour and must be made fresh daily, also see that food vessel is kept very clean and that no stale scraps are left about the cage. Every third day, so long as its excreta does not become watery loose, soak one teaspoonful of Bimeford's Magnesia into the boiled maize. Put into the bird's drinking water (say about one ounce), twenty grains of chlorate of potassium, and 4 drops of glycerine daily, till relief is given. If the bird will let you handle it or permit you to wipe out its mouth with a small camel hair brush, do so with the following mixture: Twenty grains of chlorate of potassium, and two drachms of glycerine, well cleansing the brush and using a fresh portion of the mixture for each occasion. Keep its cage strictly clean and let it have such ripe fruit as it will eat.

Cockatiels Out of Doors.

W. H. H.—It all depends on the temperature they have indulged in lately. Is your greenhouse heated? If not, and there is a shelter shed attached to your outdoor aviary, you could turn them out at once. Of course if you have been keeping them in a warm temperature you must harden them off a little, much as you would bedding plants. It should be quite safe to put them out at the beginning of next month, whatever the conditions they may have been kept under. Feed them on Canary, white and spray millet, and a few oats, green food, such as fresh lettuce, grass in flower, etc., cuttlefish and water. They are but small drinkers and for the next month or more well colour their drinking water with Parrish's Chemical Food. I shall be pleased to assist you re your aviary through the medium of this column at any time.

Brevities.

Books on Foreign Birds (Quait).—You would find Dr. Greene's "Favourite Foreign Birds" helpful, though it is a little out of date. A small booklet on the subject will be published almost immediately from this office, from my pen, on this subject. The series Housing and Keeping, etc., of Foreign Birds in Captivity will be published at some very near date, and should fully meet your requirements. Books such as you ask for are costly, and many of them do not touch upon the question of keeping them in captivity, but are costly and mostly purely scientific works.

A Pet Dove (T. D. F.).—I really don't feel competent to help you in this matter. I never kept Doves in cages. The Diamond Dove is a lovely little creature, but rather wild and not easy to tame; but once this was accomplished it would be very charming both as to beauty, robust and hardy constitution. Its coo is almost musical. An odd male would cost about 5/- or 6/-. Diet: Canary and millet seed, greenfood (grass in flower mostly), cuttlefish, grit and water for drinking and bathing. Failing this I can only advise you to try the Barbary or White Java, either of which would meet your requirements. Perhaps one of our readers could help you through our correspondence column.

Sample of Seed, etc. ("No Noise Wanted).—(1) The birds you refer to are most probably Grey Waxbills. You could put the following with your Canary, one pair each Zebra, Grey and Orange-cheek Waxbill. The only addition you would have to make to your diet, would be to supply a mixture of white and French millet, and to hang up a millet spray occasionally, and supply grass in flower or seed as greenfood. (2) The sample of rape sent appeared a very fair one, which after examination I threw to my birds. If the bulk is quite sweet in smell, and there is no mould on any portion of it, it will be quite safe to use, that is if the bulk is equal to sample; use it by all means.

POST MORTEMS.

Mr. J. North, 135, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Canary (H.).—Your very fine variegated Yellow hen died of inflammation of the liver, lungs, and spleen, ending in apoplexy—all the symptoms of bird fever.

GENERAL.

Answered by THE EDITOR.

Article (S. A. Dicken).—Yours duly received and noted. Accept our thanks for your kindness.

Paper (R. McCaw).—We are very much obliged to you for forwarding us the paper, which we shall hope to print in the near future.

"Darkening" a Hen (Bird Lover).—We prefer to leave the matter to the readers of our correspondence columns. You ask us to recommend you a colour wherewith to stain your light hen Canary dark! Surely, you do not wish us to try to stain our spotless reputation? My word!

Cutting (J. Hill).—Accept our thanks for an interesting cutting, which, however, as it deals mainly with the squirrel, is hardly suitable for our columns.

An Exchange (W. Lawrence).—Probably the best course you and your friend could take would be to write a joint letter of complaint to the police headquarters of the district.

BRADFORD & COUNTY B.B. & M.C.

A committee meeting was held on April 7th at Market Tavern, Bradford, the president, Mr. W. A. Cowgill, in the chair. The following gentlemen were enrolled as members:—Messrs. J. Rankin (Bradford), T. Oxberry (York), D. Hunter (York), J. Lano (Bradford), Isherwood (Wakefield), and W. H. Shackleton (Wibsey). A letter was read from Mr. Fred. Hammond on behalf of the CAGE BIRDS competition committee stating conditions under which the prizes given by Mr. Carl were to be competed for. This letter was passed as read, and the secretary was empowered to thank the donor for his generosity. The following alterations of rules were recommended to be placed before the annual meeting to be held April 25th in Market Tavern. Proposed by Mr. H. J. Chittenden, seconded by Mr. Duncan, "That all exhibiting members to pay the sum of 2s. 6d. annually to compete for specials offered by this club, such fee to be paid to secretary before points counts for said specials. Amendment, proposed by Mr. T. H. Inman, and seconded by Mr. Sam Dean, that "The fee be 2s. all round, for non-exhibiting as well as exhibiting members." It was also suggested that the name of the club be altered to the Yorkshire County British Bird and Mule Club. The above, of course, are suggestions only, and must be ratified by vote at annual meeting.—W. R. MYERS, Hon. Sec.

CORRESPONDENCE.

A CANARY SEED PROBLEM.

SIR,—Can any reader kindly let me know, through CAGE BIRDS, whether there is a machine for getting rid of the husks of Canary seed quickly, when cleaning out, or is there any way of doing this other than by turning the seed hoppers out, and blowing on same?

AIRSHIP.

WILL A GOLDFINCH WITH ONE WING BREED MULES?

SIR,—Can any reader kindly tell me whether a Goldfinch with only one wing is of any use for Mule breeding? I had the bird last year, and intended mating it with a Canary this year, but unfortunately a cat got at it through the wire of my outdoor aviary, and tore the wing completely off. However, I bathed the bird, etc., and eventually it got well again. At present I have it caged with a Canary and they are on excellent terms with each other; the Goldie is very attentive to her, feeding her, etc., and she seems most anxious to build. By following the information that CAGE BIRDS gave me last year (on Mule breeding), I was successful in getting seven Goldfinch Mules from the pair that I had put up. This was my first venture in breeding.

C.B.

TWO EGGS IN ONE DAY.

SIR,—In reply to your correspondents, J. S. and E. W. Lunt, in your issue of April 11th, referring to their experience of a Canary laying two eggs in one morning, may I say that on Thursday, April 9th, I quite expected that when I went into my bird-room I should find an egg in the nest, where I had one of my pairs up for breeding; but I did not find same. Being a little anxious, I looked into the cage on the evening of the same day (April 9th), just as I was retiring to bed at about 11.15. The hen, which was on the perch, was apparently all right. When I went in next morning, I was astonished to find she had laid two eggs. One was rather large with one end much thicker than the other, and almost flat, with a dent in the middle. The other egg was of the ordinary size with a white ring on one side as though this had been embedded in the dent on the large egg. I may say these were laid without my having to interfere in any way with her and by all appearances she looked as if she would lay again in the morning (April 11th).

J. G. COWLEY.

A SURE WAY OF CATCHING AN ESCAPED BIRD.

SIR,—My plan is to get a garden syringe, fill it with water, carefully approach the bird, and, when within a few yards of it, play the water on it. This damps the bird's wings and effectually prevents it from flying away. While the bird is in this damp state, it can, of course, very easily be caught. I also enclose an extract from the "Evening News," headed "A Canary Chase." If in this case my plan had been carried out, the "chase" might have had a different ending. I trust this method may be of some use to your readers. "Two men with a ladder, followed by an excited crowd, hurried through the streets surrounding Leicester-square early to-day. Every few minutes they would stop, place the ladder against the front of a house, run up, perform a few acrobatic evolutions at the top, and then descend. Advice was freely showered upon them when it became known that they were in pursuit of an elusive half-sovereign. Before they could obtain it, it was necessary that they should capture a Canary. This Canary had escaped from its cage, and had perched upon a sill on the opposite side of the street. Then the fun commenced. The cheeky Sparrows watched the little yellow stranger as it flitted from perch to perch. It waited until its pursuers' fingers had almost closed upon it, and then it flew away. It did this repeatedly, until at last, in Leicester-square itself, it perched upon a narrow coping between two windows. From one of the latter crept a man, hugging the wall closely. With the skill of a Blondin he crept on and on but the bird only glanced at him contemptuously and then flew away again. One member of the crowd threw his cap at the bird. It missed it by a good foot, and remained on the ledge. The ladder men did not think it worth while to rescue it, so one spectator at least went home a sadder, and possibly a wiser man. And finally the chase had to be abandoned. Tired of the attention of the pursuers, the Canary tried a longer flight, finally perching on the parapet of a lofty house. So the men gave up the chase in despair, and carried their ladder home. A bird in the hand, indeed, is worth two on the roof."

EDWARD PARRINGTON.

A GOLDFINCH'S "CROSSED" BEAK.

SIR,—I notice that A. B. Hanley, last week, asks Mr. Weston some questions about a Goldfinch with a "crossed" beak. Last year I had a similar experience with a bird, and as it sat moping on the perch, evidently in great pain, and not eating anything, I scalded it some rape, of which it was extremely fond. After eyeing it for a time, it fluttered down, and commenced to eat. Whether it had a seed, or husk, lodged in its maw, and whether this had "put it out" I do not know, but tho wet soft food put it right again, or else, in shelling the seeds, the mandibles worked back to their right place again. The bird did it several times during the time we had it, but the "crossed" beak always went right after a dose of soft food.

NEARLY THE SAME.

THE HEATING OF A BIRD-ROOM

SIR,—There is a slight error in my description of my heating contrivance, which appears in your issue of April 11. Tho lines, beginning "two plates," should read: "Two plates are bolted to cover the centre hole in pot No. 1 (this size of pot has four holes in the bottom). The three-inch hole is bored in the centre of plate, upon which the pots stand. As you will understand, this little detail makes all the difference in the working of the apparatus, for should the flame be extinquished and the gas tap remain open, the pots would become charged with gas, and therefore dangerous if anyone approached the heater with a light.

E. WEAR.

A DULWICH AND PECKHAM MATTER.

SIR,—I notice that the "Fancy" are to be treated to two open shows in S.E. London, these having similar names, viz., the Dulwich O.S. and the Dulwich and Peckham C.B.S. Would it not be better alike for exhibitors and the Fancy in general, if the latter society altered its name to Peckham C.B.S., seeing that their headquarters are in Peckham? I believe that out of their membership only three reside in Dulwich. Their annual show is also to be held (accordiug to reports) in Peckham. The annual show of the Dulwich O.S., I am informed, is to be held in Dulwich. Most of the officials of the D.O.S. are Dulwichites, with their headquarters in Dulwich; the society also is the only Cage Bird Society in Dulwich. The Dulwich and Peckham C.B.S. having left Dulwich, why should thoy retain the name of Dulwich? I write this, not wishing in any way to dictate, but it will save a lot of confusion.

TIT LARK.

MR. F. HAMMOND TENDERS HIS THANKS TO THE FANCIERS OF YORKSHIRE & ELSEWHERE.

SIR,—I cannot allow my retirement from the office of secretary to the Yorkshire Union to pass without expressing my heartfelt thanks to the multitude of fanciers who, in various ways, have added so materially to the pleasures and useful experiences which the office has afforded me. Without such friendly co-operation and assistance, I feel that the duties would constitute a barrier too difficult for any ordinary individual to negotiate with any degree of satisfaction to either the Union or himself, and, in this connection, I would most sincerely bespeak for my friend and successor, Mr. Dean, all the sympathy and help that has so readily been accorded to me, feeling, as I do, that he will prove himself worthy of it. More he can neither desire nor expect. I have already availed myself of the pleasurable opportunity of thanking the president and other officers, along with tho entire body of delegates forming the Council, for the unbounded confidence they have invariably placed in me, and for the unfailing appreciation and courtesy which have never been denied me. No less satisfactory and helpful has been the attitude of the societies, who, without exception, have done all they could to make my task the easier, and I trust they will entertain no doubts that my thanks are heartfelt and most sincere. Especially, I would convey such a message to those societies and individuals who have accepted so loyally the interpretations (sometimes conflicting with their own desires and interests) which I have been called upon to place on the rules of the Union when time has not permitted the calling together of the committee to deal with such matters. The donors of the valuable prizes offered by the Union have already received the thanks of those present at the united gathering when such prizes were presented, but I feel that such generosity is so particularly gratifying to the secretary of any institution upon which it is bestowed, that I wish to place on public record that which I trust I have already conveyed to those concerned. I should feel myself guilty of great ingratitude were I to omit mention of the many who, although in many cases in no way connected with the Union, have congratulated me upon and encouraged me in the discharge of my duties From north, east, south and west letters of praise and commendation have reached me, and although I feel that far too generous words have been written of me and much unmerited praise lavished upon my work in this connection, it is, nevertheless, a source of happiness to know that in my retirement from the office, I am accorded the good wishes and deep respect of so many, and that such efforts as I have been able to put forward on behalf of my fellow-fanciers have been so kindly received and keenly appreciated. Greater reward I neither know nor desire. Lastly, but none the less appreciated on that account, I beg to tender to you, Sir, my most sincere thanks for the ever ready willingness with which you have opened your columns to me on all occasions, for the reports of our meetings and other matters, without which, I am afraid, much that has been accomplished would have remained undone

With kind regards and best wishes to all interested, I remain, very faithfully,

FRED HAMMOND.

Late Secretary, Yorkshire Union.

BIRD CATCHING.

SIR,—Seeing in CAGE BIRDS a letter from "Constant Reader" about bird-catching, perhaps he would be good enough to answer the following questions for me. What is a suitable distance to be from the nets (clap-nets) without the birds taking fright at you and not dropping? How do you train the bird, or birds, to the flur stick, so that they flutter properly; also what kind of birds can be used as flur birds? What is the best time of the day for using clap-nets, as I shall have time for using them in November or December? What sort of call birds can be used, Goldfinches, Linnets, etc.? How do you get the birds used to the call cages and how do you arrange the call cages round the nets and the flur bird between them? Thanking "Constant Reader" in anticipation, and hoping he will write more on bird-catching very shortly, I am,

NOVICE.

SIR,—I shall be very grateful if "Constant Reader" would give me a few hints on Bullfinch catching. I have caught them with limed twigs set on docks, but this method spoils their plumage, and the greater part I caught died. I once tried a two-compartment trap cage, but without success. Would he tell me if they can be caught with net traps, or a small net, and whether brace birds are required, as I understand that bracing birds is illegal in the county of Durham?

ANXIOUS.

The Substitute for Egg & Bread Crumbs,

SPRATT'S COD LIVER OIL Cage Bird Food.

Mr. R. A. BROWN, Sec. of Glasgow and West of Scotland Norwich, Mule, British and Foreign Bird Club, writes:—"I have used your Cod Liver Oil Food and C. and C. B Food, totally supplanting the usual Egg Food, these last two seasons and have great faith in its nourishing properties.

"I have successfully reared over fifty young birds on it and find its easy manipulation and handiness a decided boon in the bird room."

Rears from the Nest Gives Staming.

SAVES TROUBLE & EXPENSE

In 3d. and 6d. Tins, post paid, 6d. and 9d., also in 3½ lb. and 7 lb. Bags, Price, 1/3 and 2/6, post paid, 1/9 and 3/2. Send postcard for Samples also FREE Booklet on "Canary and Cage Bird Rearing."

Spratt's Patent Limited, 24 & 25, Fenchurch Street, LONDON, E.C.

NEW SOCIETY FOR CARMARTHEN.

SIR,—I shall be obliged if you will announce in your columns this week that an enthusiastic meeting of fanciers was held at the Plough Hotel, Carmarthen, on Thursday, the 9th inst., when it was unanimously decided to form a "Fur and Feather Society." A further meeting will be held on Wednesday, the 22nd inst., at 8.15 p.m., at the above hostelry, when all fanciers are cordially invited to attend. There is every prospect that the outcome will be a good strong society, as numerous promises of support have been received from fanciers of cage birds, etc. It is proposed to cater for all sections. Post-cards will be sent to all fanciers in the district, but should any be inadvertently overlooked, it is hoped that they will put in an appearance at the meeting on the 22nd inst.

R. DAVIDSON.

Guildhall Square.

MULES AND HYBRIDS: WHAT IS THE DIFFERENCE?

SIR,—In reply to S. R. Fuller, I think it would be preferable to name all crosses in which one parent is a Canary as Mules. All other crosses should be named Hybrids. I have to trust to memory to give anything like a date when I saw the first young produced from a pair of Bramble-Chaffinch Hybrids. The parents were the first known of this cross, and were exhibited at the Crystal Palace in 1872, I think, and were shown by the late T. J. Monk, of Lewes, who bred them in his aviary; he also bred Hybrids between Pied and Grey Wagtails. I think the Canary is a Hybrid on account of the sports that have been produced from it. Fertile Hybrids, amongst other feathered stock, sport in many curious ways, as can be seen in Pigeons, Pheasants and Water-fowl. I have never heard or read of the domesticated Canary producing fertile young from any of the so-called Wild Canaries. Many have bred from Serinus canicollis, the bird most frequently offered as the Wild Canary, paired with the Common Canary; and the progeny have been Mules. Some writers think that the Canary originated from the Serin. I have bred from Serin and Canary, but the only young one I had was quickly purchased, and I never heard anything more about it. I wish someone would try breeding from the Serin paired to the Citril-Finch; I think the progeny would be much like a green Border Fancy. I have neither an aviary nor a bird room now, so must look for novelties from the younger generation. I wish some fancier would try and breed from the American Purple Finch and English Bullfinch; I think some very handsome Hybrids would be produced, especially if colour-fed. I have bred several young from Purple Finch and Canary.

J. H. VERRALL.

TANAGERS IN CAPTIVITY.

SIR,—I had intended writing you many weeks ago, to tender you my sincere thanks for illustrating my Blue Tanager in your valuable CAGE BIRDS ANNUAL, but with so many business details to constantly occupy my attention, I had quite unintentionally overlooked it. Although the old adage is "better late than never," I contend it is "better never late." However, I now ask you to kindly accept my sincere thanks for such a life-like reproduction of one of my favourite birds. Although this season is now so far advanced, this bird, in common with all my other Tanagers (numbering 20 of various species), is still in the same beautiful condition as when it was on the show bench, due, I believe, to their diet, and to no heat whatever being used during all the severe and changeable weather conditions of our climate. I am convinced by practical experience that once artificial heat is given to foreign birds, it must not only be kept up, but the slightest change in temperature is apt to be dangerous. Let the food be something that will give them stamina, and the conditions under which they are kept be favourable, and Tanagers, Fruiteaters, and all species of insectivorous foreign birds can be as easily kept in perfect health and feather as any Seedeators. Some of my Tanagers, including the above, have been in the travelling box (to and from the shows) upwards of twenty hours at a time, and when unpacked, have been as lively as if they had only been there a very short time. In fact I have one Olive Tanager that invariably sang within five minutes of being unpacked after a journey lasting from twelve to twenty hours. I only mention this because I have so often heard fanciers say that it is well nigh impossible to travel Tanagers to such an extent.

O. MILLSUM.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

A LINNET AND GOLDFINCH PROBLEM.

SIR,—Having been a lover of Linnets and Goldies for years, I find that I lose a number of them with inflammation. I have "rung the changes" upon most seeds, and tried different remedies, but still find them sitting moping, and on handling them, the abdomen is found to be red and swollen. At present I am feeding on Canary rape, teazle and hemp, with linseed, maw, and niger given sparingly. Could any reader give me a cure, or better still, a preventative?

KITTY.

CANARIES' EARLY NESTING IN OUTDOOR AVIARY.

SIR,—I sent in a report a fortnight ago respecting a nest of young Canaries in an outdoor aviary, they being three weeks old today, and in the best of health. Now at the time of writing again, I have two more nests of eggs of four each. The aviary is in a very exposed position, having no shelter of any kind; for the first week after the young were hatched, I had to break the ice, which on three successive mornings was an eighth of an inch thick; and there were also several hail storms from the north east. This shows that we are inclined to keep our little friends in too warm and cosy temperatures. I must say, that though only living in a small village, there are several fanciers, and we are always anxious for our CAGE BIRDS on Friday mornings.

WEST WELL HARLIQUIN.

THE CHALLENGE CUP AT NEWCASTLE-ON-TYNE.

SIR,—We notice Mr. C. Baker, of Bedminster, advertising in your valuable paper under heading of "various Canaries" that he has supplied "Winner of challenge cup, Newcastle-on-Tyne." We wish to state that we have had no dealings with Mr. C. Baker. We were the winners of the challenge bowl in 1906, for the best young bird in the show, bred by the exhibitor, and the bowl was for the first time in competition that year. We hope Mr. Baker will reply, and give us the name of the person, and the year the challenge cup was won, as stated in advertisement. We have been asked several times by fanciers if we bought our challenge bowl winner off Mr. C. Baker. We bred the said bird ourselves, and it was seen by several fanciers from leaving the nest till the time of our exhibiting it.

DOBSON & SON.

In answer to a direct enquiry from ourselves, Mr. Baker states that the bird was sold to a John Harker, of Newcastle-on-Tyne, adding: "I could not state where this cup was won." Possibly some Northern fanciers can enlighten us on this point.—EDITOR.

BORDER FANCY CANARY CLUB AND ITS JUDGES.

SIR,—Horace says that, "to write well, one must think justly"; but I cannot say Mr. Patterson has done either in his last epistle. He seems to be in straits with regard to the heading of the discussion, and to give him freedom to answer me, you, Sir, might alter the heading to read as he suggests, for since he thinks he has silenced the opposition of the B.F.C. he seems now to look upon me as a wandering intruder. I will leave it with your many readers to judge for themselves, and I think they will easily see he has made many unrighteous insinuations, and prophesied what would take place. Now he says, what he has written are facts. Is it a fact that, suppose the B.F.C.'s judges were engaged to their limit, there would be none but perfect novices to place the awards at the remaining shows? If this is so, the exhibiting of this variety cannot continue long. But I am satisfied that, through experience and the many helps CAGE BIRDS affords, there will always be fanciers capable of judging this variety apart from the B.F.C., and I can assure Mr. Patterson that I have no axe to grind, and therefore do not require a grinding stone from Chirnside. I am quite willing, however, to defend capable fanciers and judges outside the ranks of the B.F.C., and not being a member of that club, I have no personal grievance. Further, the B.F.C., as well as some other clubs, has that rule not to patronise any societies unless they select the club's judges (which has proved itself not in the interests of this variety). Surely more honour for the B.F.C. members to win with neutral judges. Now, Mr. Patterson gives it as his humble opinion that no breeder of the variety is acting for its advancement if he does not pay the 2s. 6d. subscription and become a member of the B.F.C. From my experience in the Fancy, I hold a different opinion, and am quite prepared to discuss the difference of our opinions through your columns. Therefore, I ask Mr. Patterson what the many breeders outside the B.F.C. are doing to advance this variety, who supply beginners with good birds at a small price, and show them CAGE BIRDS, and adviso them to get it weekly and read it carefully? Again, what are the breeders doing who have run a show for years and risked no less than eight classes for Borders without the patronage of the B.F.C., and have still a few pounds in the bank? Why is it if the B.F.C. has advanced this variety, that it has only 300 members? Why is it that in districts I have visited, I have come in contact with many breeders and found so few of the club's members, sometimes only one or two in a large district? The town I live in has almost twenty breeders of this variety and only one a member of the B.F.C. Now as your time, Mr. Patterson, to aim at a straightforward, honest policy for the welfare of our favourites, without embittering the feelings of anyone who makes them his hobby, in advocating unity not only with the B.F.C. and the societies that seek its patronage, but amongst all the lovers of this variety. United we stand, divided the club may fall.

ROBT. LAMBIE.

DULWICH AND PECKHAM C.B.S. SHOW.

SIR,—The great difficulty that faced the committee of the re-organised Dulwich and Peckham C.B.S. with regard to staging for our show has been met, an officer of the society (one of the best known breeders and exhibitors of the Norwich down South) having spontaneously come forward, and generously provided the necessary funds to purchase same. The work has been put in hand, and two officers of the society (both practical men) are now busy making staging sufficient for 1,000 to 1,500 birds, so that by the time our shows come round the society will be in possession of one of the finest and most up-to-date lot of staging in the Kingdom. The society is flourishing in its new home; some 30 new members have been elected since taking up our new quarters.

W. HODSON, Hon. Sec.

STANDARD SHOW CAGES FOR BRITISH HARDBILLS.

SIR,—I was rather disappointed when opening my CAGE BIRDS on Friday last, not to see a reply from Mr. L. J. Arrighi, to "Well-wisher of the S.B.B. and M.C.," after requesting his name, before he would reply, for I have now given my name. I fully expected to see some of his views expressed through your valuable paper, so that I might have rendered him any assistance I could in the adoption of a standard show cage for Hardbilled British in Scotland, as I believe this cage would give much more satisfaction to both judges and exhibitors. The question is well worth discussion, I believe.

RICHARD GADSDEN.

SIR,—Mr. L. J. Arrighi's tardy conversion to the idea of a "Standard show cage" for Hardbilled British birds, is apparently only half-hearted after all, as he has no intention, apparently, of supplying "Wellwisher" who has now revealed his identity, with the information he desires. Personally, I do not agree with the idea of a standard pattern show cage, as there are numerous workingmen fanciers who make their own cages and make them well too, who will by its adoption be debarred from indulging in this branch of their hobby. To a large number this is a real hardship, as they will be forced to spend money, which they can ill afford to do, on an article that could be manufactured by themselves at much less cost and with more satisfaction. It is intended, I believe, to give the "right" to manufacture and sell these cages to one firm. This is "monopoly" with a vengeance, and is very unfair both to the "trade" and exhibitors of "H.B.B.," as all competition is thereby debarred. This is a serious consideration as it will probably cause a large decrease in the number of "H.B.B." exhibitors, men who, as already stated, cannot afford to pay an inflated price for the privilege of exhibiting in a "Standard show cage." If the latter must be adopted, cut the monopoly out, and allow exhibitors to make their own or purchase where they like, so long as the "Standard" is conformed to. It seems to me, however, to cast a reflection on our judges to enforce a standard or uniform pattern show cage. Surely a man who accepts the high position of judge, can be trusted to judge the birds and not the cages. If he is found to betray this trust, societies have the remedy in their own hands—boycott or "black list" him. Hoping to see a reply from either of your correspondents.

ROLLER CANARIES AT THE PALACE SHOW.

SIR,—I see Mr. Norris, in his reply to Mr. Whittaker, makes use of two expressions, one: "Then what a pity to sell the birds. It makes one wonder why." It is on the strength of trying to answer them, Mr. Norris, that I hope you will pardon my temerity in writing this letter, as I have no desire but to see the Roller fancy progress. Now, as the buyer of one of the birds in question, I cannot help thinking the remarks are out of place. I cannot see where the "pity" comes in, as what is Whittaker's loss is (or, I hope so, at any rate) my gain. How are we novices to attain prominence in the fancy if not by buying the best that a breeder has? If every breeder stuck to all the good birds he bred, it would be uphill work indeed for novices, like myself, and would not be much encouragement for fresh fanciers joining our ranks. As regards the other expression, as to why Whittaker had sold the birds, I will, as far as I can, enlighten you, for your remarks imply that he (Mr. Whittaker) had been doing this writing to sell the birds, which, in my case, is not so by a long way. It was only as a personal favour (for which I shall always be grateful) that Whittaker let me have the bird. The bird has been in the breeding cage and put a hen to nest, and I am just as satisfied with him, as I was while he was at Moses Gate (probably more so). If he retains his present excellence (I hope he will) I shall be perfectly satisfied as I have been with others I have had from the same room. As regards the other bird (ex. 3rd at the Palace) it is only because I could not have it that it is not another link in a novices' team of Rollers, and if I thought Mr. Bramhall could be induced to part with it, I should, all being well, soon be at Gt. Lever to buy the bird. As regards the Manchester meeting and the above bird, and the members alleged remark, that "if that ought to have been the Palace winner then there must have been a poor lot bred last year." I hope, Mr. N., you will pardon me referring to the matter in discussion between you and Whittaker, which I most certainly should not have done if you had not quoted "A member's opinion" (above stated), and I claim the same privilege, as I was present at Manchester at the meeting. It was quite clear to anybody who had only a little knowledge of Rollers that the bird did not sing his song. But it certainly did not do anything wrong, and that seems to me to be (or should be) the chief point at issue. The "member" in his wisdom seems to forget the bird scored 24 points at the Palace without any added for purity and delivery (which it ought to get, in my opinion), and if instead of debiting it with seven points for faults (which I feel sure was a mistake) it had got the points added on to its score, it would have scored more points than we get a bird to do every year. But even without the purity and delivery points, it would get equal points to the winner, so that I think the remarks are out of place altogether, as the "member" never yet heard it do anything to bring a 7 points debit. My advice to the "member" is to labour hard to breed birds its equal, and then, perhaps, they will qualify him to be exempt from the novice or amateur classes. I fancy there were few at the meeting besides Whittaker, who could claim that honour. In conclusion, I wish all Roller fanciers a good breeding season.

S. G. PARR.

SIR,—In reply to Mr. Norris, I must say that I have a copy of all my letters and that if he has got his "feathers so ruffled" that he allows his pen to run away with him, I have not. Fancy Mr. N. not denying, if he could, any statement I have made. So far, Mr. N., you have given a straight forward denial to only two of my statements. One is that you still say my challenge was accepted, and that you will give £5 to the funds of the club if it was not, while I am to give £5 if it was. Well, Sir, I am enclosing £5 as my deposit to accept that offer, and I hope you will act as referee. I am also posting to you copies of all my letters to Mr. Norris, and of all his letters to me on this subject, and I have written to him asking him to forward to you his £5, and do the same. I suggest the loser pays you your charge for trouble, etc. Now, Mr. N., I hope you will not run away from this point, like you have run away from all the others, and I suggest that the £5 of the loser be given as specials, say 50s., 30s., and 20s., for the three best 1907 rung birds at the next club show. The other denial is about the club meetings. I may be wrong in this, but my information comes from a reliable source, and when you average the attendances up from your own returns, and they work out at less than six per meeting, it does not speak for much. You presume that I might have found a judge to judge my birds, and paid him and his expenses up to London, and then have rung for the benefit of the club. What in the world will you presume next, I wonder? No "heads I win, tails you lose," about me, Mr. Norris. If I make a match and lose I pay, and if I win I expect to draw. Once more let me say that my challenge had nothing to do with you, or an offer to sing for the benefit of the club, or even the B.R.C.C. Here are a facts about your letter: 1. The member who told you the opinion of the Manchester meeting was so and so, told you an untruth. 2. You do not speak the truth when you say that I agreed to sing for the loser to pay the money to the funds of the club. 3. You know quite well that these two birds did not come to the club show (so this is another shock for nothing). 4. I only know of one "stormy scene" at a show, and you did a lot to make it (at Wakefield, 1906), when you made such a bother over the uniform club show cage (and where are they now?)

W. WHITTAKER.

[We have to acknowledge receipt of a money order value £5 from Mr. Whittaker.—EDITOR].

EARLY SPRING IN CHESHIRE.

SIR,—The first day of spring was a most genial one for a ramble, so I decided to take a short trip into Cheshire in quest of the signs of spring. Leaving Manchester Central in the morning, I went south-west to a Cheshire village far away from townships and city. I had not got far from the station when a Starling with a long straw in his beak caught my eye, and he was very soon out of sight under the eaves of a large dwelling-house. The time of year was greatly in evidence further along the road, for in the cottage gardens there were in profusion the lovely blooms of the hardy crocus, the rose and lilac trees all bursting into leaf, and the cheeky little Chubbie with his mate on the spouting in the outhouse. Daffs were in bud (in some cases breaking into flower), and here and there along the uncut hedges were the silvery buds of the palm, which bids fair for a green country by the time Easter is here. Away in a clump of stately elms the Crows were repairing their old habitations and making a fine noise as if they were aware that spring had come. One could not help but notice the lovely green of the pasture lands and the springing wheat, barley and oats in the arable land along the roadside. Continuing some two miles along this road, I turned to the left down a lane which apparently led to a farm. I made my way and here it was quite a sight to see the birds bathing in the sunshine on the sides of the lane. On the top of a small haystack a Chaffinch was singing his hearty chorus, and in the hedge just to the front was the Jenny Wren hopping about, first to the top to sing his wonderful song and then down again. In an ash tree hard by the Robin was singing for all he was worth, and the artful little Blue Tits in a slow plum tree were apparently having a quarrel. Coming to a cottage, I obtained permission to go across the grounds to the road beyond. Greenery generally was well on its way for its full summer dress. Crossing a stream where the Blackbird and Thrush seemed to abound, I made my way to a gate that led to a ploughed ground where I saw a pair of Pied Wagtails and three Pipits, their "tweet tweet" being distinctly audible in the wind, and although so close to a ploughman and myself they didn't seem to fear. Keeping along by the side of the hedge, I thought I could see a Sand piper by the side of a huge pool, and I was most anxious to make certain; taking a further stile I managed to get a better view, and then satisfied myself as to its identity. On the same water the Moorhen was washing herself by the side of some rushes, and from a gravel slope close by some Linnets flew up that had apparently been down to bathe. The sun was quite hot. I think this was the first time I have perspired this year. Not knowing my way, I returned to the ploughed ground, at the far end of which the Peewit was hovering, making his plaintive cry. The south side of the hedges are well forward, but the north sides do not appear to have awakened from their winter sleep. Leaving the ploughed ground for a rough pasture which was apparently waiting to be turned up, some hundreds of Linnets, Greenfinches, Pipits, and Yellowhammers flew up, crossing the ground. The hedge seemed all alive with bird life, the Yellowhammers and Greenfinches being most conspicuous amongst the others. In a small brake in front the cooing of Doves and Woodpigeons could be distinctly heard, but although I waited some minutes I didn't see or hear the Woodpecker. Getting into a narrow lane, I saw a pair of Bullies flying down the hedge, and up in a stately spruce tree the Song Thrush was singing his beautiful song. Unfortunately, the time of day was getting on, and I had to make for the station after a most enjoyable ramble all on my own.

S. W. BIRCHLEY.

The Novices Notebook.

This page will consist of topical hints, addressed chiefly to beginners, concerning every branch of the hobby of bird-keeping, and the notes will be contributed from time to time by various leading experts.

(*Continued from page* 379).

The Sweating Hen Tragedy.

There are few more thoroughly disheartening experiences in the career of the amateur bird-keeper than the tragedy of the sweating hen, as it may well be called. It so often occurs among the very best, and apparently most vigorous hens, and the initial stage, mating, nesting, egg-laying, sitting, has all run so smoothly that the thought of any serious hitch occurring is never for a moment entertained. Hatching goes off without a shadow of anxiety, the hen feeds well, and for a few days everything seems to go on well. Perhaps there is a brood of four or five thriving chicks, the sight of which keeps the owner on very good terms with himself and the world in general. Then comes a change.

One morning when he goes to attend to them he finds the hen looking dull and care-worn, and showing no inclination to leave the nest. If she is driven off, the iron or disappointment may enter the breeder's soul. The brood which yesterday looked so charming may perhaps gape half-heartedly, or they may lie limp in the bottom of the nest—no longer the soft, fluffy little "balls of tow," but moist, dishevelled little mites, with the erstwhile pretty upstanding down, lying damp and prostrate about their bodies. The hen, too, who will be waiting for a chance to pop on to them again, has a similar limp appearance, and a kind of moist look about the plumage of the abdomen. An experienced eye would have noticed yesterday that she was changed, that a listlessness was growing upon her, and that her plumage on the lower surface already showed signs of a heated and moist condition, which was not quite normal. Now when things have reached this stage one can pretty safely forecast the result.

A Suggested Treatment.

I call it a suggested treatment, because I have never yet had an opportunity of putting it to a practical test since it occurred to me. I have, however, sufficient confidence in its utility to give it here for what it may be worth, so that anyone who has the said trouble to contend with may put it to a test, in which case, if they find it proves an efficient remedy, they may perhaps remember that "one good turn deserves another," and be prompted to send a short note to our correspondence columns to report the result for the benefit of their fellow-fanciers. The treatment is simplicity itself. On the first sign of listlessness, when the hen shows that peculiar condition of plumage underneath which is the precursor of sweating, give her a tepid bath, in which a quantity of boracic acid has been dissolved equal to a teaspoonful to each pint of water, and in each ounce of drinking water dissolve as much of the acid as will cover a threepenny piece, and the same quantity of Epsom salts. This medicated water may be given during the middle portion of the day only—say, for four or five hours—and may be repeated on two or three consecutive days. The bath also, prepared as above, may be given each day until the hen appears all right again.

Lest the quantity of water mentioned for drinking, should cause any confusion to arise, it may be as well to say that two ordinary tablespoonfuls is approximately one fluid ounce, and, further, that the ordinary types of drinking vessels for cages are constructed to hold about one fluid ounce. These measures may not be quite correct scientifically, but they are near enough for all practical purposes. This bath and medicated water for a day or two is the essential part of the treatment I would suggest, but as I have so often known the trouble to arise and go on persistently in cases where the green-food consisted mainly of dandelion, I should also reject this altogether and substitute lettuce, or chickweed. This must not be taken as implying that dandelion is the real cause of sweating. Whatever trouble it may help to cause in other directions, I should scarcely add this to the list. The real cause in all probability, as shown by modern discoveries, is septic disease germs in a non-malignant form, and the suggested treatment is based on this assumption.

Out-of-Date Remedies.

To go through an extensive list of other remedies which have one after another been weighed in the balances and found wanting, seems very futile. The one that perhaps had some little method in its favour was to add a variety of other foods beside egg-food to the dietary, and also a variety of green-foods. If this change was made in time, it might ward off an attack, and allow a hen to continue to perform her duties, but when once she has reached the afore-named condition, the chances of her recommencing to perform her duties are by no means very abundant. A dose of Epsom salts in the water in conjunction with the change of food was of good service. Indeed, the bottle of salts was a mighty secret, which once upon a time created a great *furore* as an infallible cure for sweating. That it had its useful purpose there is little room for doubt, but seeing that the boracic acid is exceptionally antagonistic to the septic germs and that nothing of practical service is at once so safe and harmless to use, there seems a very good prospect of the suggested treatment proving of some material use.

Two Nests at Once.

In a few cases one will find some good and careful parents, who will, if supplied with a second nestpan, carry on the operations for a second nest whilst at the same time treating the young of the first brood quite satisfactorily. In such cases, it will be found that the young have reached an age when they do not require the constant brooding of the hen—say, from twelve to fourteen days' old. The cock is also generally a good feeder, and has already taken upon himself a large share of the feeding of the young, so that, as a matter of fact, the hen is really not much occupied with them. The only point of any real importance is her behaviour towards them when building the second best. The danger is that she may take a fancy to the growing feathers of the young with which to line her second nest.

In the Nursery Cage.

The young at this time are quite able to do without regular brooding during the day, and may be placed, nest-pan and nest, altogether in a nursery cage, and hung on the front of the breeding cage, hanging them rather low down, so that the hen cannot easily reach them when they are lying quietly in the nest, and yet so that both parents can reach to feed them quite easily when the young raise their heads and gape for food. When the birds are about going to roost at night the nest pan may be replaced in its original position when the hen will very often sit upon them or upon the side of the nest and keep them warm and cosy until morning.

Then one will have to be up betimes to remove the young again next morning, or the chances are that they will be in a pitiable plight by breakfast time. It goes without saying that one must keep a watch upon the hen the first night or two that the young are replaced, in order to see whether she begins to pluck them instead of settling down comfortably. Should she do this, the nest and young must again be returned to the nursery, and the nest nicely covered with a fold or two of soft warm flannel or woollen, until morning. This will, as a rule, be quite sufficient protection from cold at all times after the young have begun to shoot their tail feathers, except it should be in very early spring, or during extreme snaps of cold weather.

To Prevent a Chill.

In either of the latter events, some simple means of preventing a chill during the night may be devised. One of the simplest, which may be made to answer admirably, is to thoroughly heat a common fire-proof brick in the kitchen oven, then wrap it up well in several thicknesses of old flannel or woollen, and place it on some support immediately underneath the nursery in such a position that the nursery practically stands upon the swathed hot brick. It will give out a nice comfortable heat for hours, so that if one is placed in position late at night, it will give sufficient heat until early next morning, when it may be renewed if considered necessary. A couple of such bricks would provide a constant relay of heat supply for a nursery cage.

Feeding Too High.

One way by which the tyro is apt to bring about this trouble with too rapid breeding is in keeping the old birds in a too highly stimulated condition. The situation in which they are kept always plays an important part in the question of feeding. As a rule the amateur breeder quite overlooks this fact. He has one system of feeding for given seasons, and only one, regardless of the fact that it makes a very material difference upon birds kept in a cold room to what might reasonably be expected with those which are kept in a heated room, or one which is equivalent to a heated one. I say equivalent, because there are quite a number of working-men fanciers who breed with a few pairs of birds and who keep their stock in the kitchen or the ordinary living-room. Now, this situation is very often quite equal to what would be termed a very warm room, and is at all times—at least, during the day, and sometimes at night, too, as a very great number of the working classes have a practice of smothering the kitchen fire and allowing it to burn slowly all through the night—quite equal in temperature to a moderately-heated room. Yet in spite of this obvious fact, the owners almost invariably consider the birds as being in a cold or unheated room. Then the birds are highly fed, and this stimulation added to the warmth of the room, and the still more potent influence of the on-coming spring force the birds to an abnormal and unnatural productiveness which bring on the desire to recommence nesting almost as soon, in a manner of speaking, as they have got through one period of incubation.

(*To be continued.*)

Cage Birds Annual

— For 1908 —

The Standard Guide to the Fancy, is

A MARVELLOUS SIXPENNYWORTH

—absolutely the best ever put before the Fancy.

LETTERS OF APPRECIATION REACH US BY EVERY POST.

A charming new cover, many beautiful illustrations of winning birds printed on art paper, a lovely coloured plate for frontispiece, a complete revision of all the popular features, and the addition of strikingly useful new features, mark this 1908 issue.

The articles, too, have never been excelled, and both Canary, Hybrid, British and Foreign bird keepers have been specially catered for. The needs of the beginner have likewise been given the fullest consideration.

ILLUSTRATED IDEAS

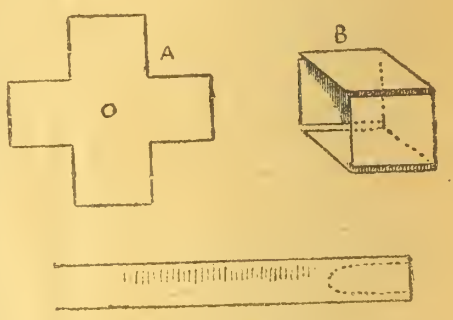
Under this heading we shall illustrate weekly some ideas useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 197.

ADJUSTABLE PERCH AND RED MITE TRAP.

Sent by Irvin Iredale, 9, Esmond Street, Great Horton, Bradford.

Get a piece of strong tin and cut it out to figure A, with a hole in centre to take a small screw. Then bend to position shown in B. Next bore a hole 1in. deep into one end of piece of wood in-



A Novel Perch.

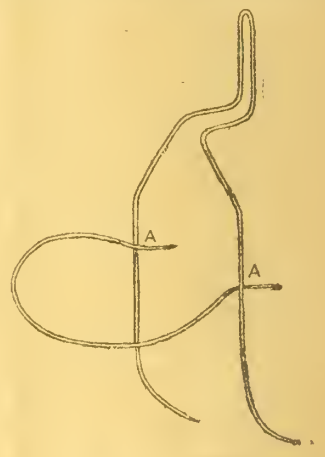
tended for the perch; then cut four saw gates ¾in. long. The hole should be stuffed with cotton wool. Adjust perch in tin socket, at back of cage, with the front end resting on cross-bar of cage front. The perch can be easily taken out to be cleaned, and cotton wool removed and searched for red mites.—I. IREDALE.

No. 198.

AN IMPROVED NEST-HANGER.

Sent by H. Blocksidge, 15, Wallis Street, Prestwick, Manchester.

The above is made with two pieces of 14-guage iron wire, soldered together at points A, A. The back piece needs to be 15ins. long, and the ring 12ins. long, each



A Nest-Hanger.

end being pointed sharp to prevent the nest moving about. It has the advantage of the nestpan not touching the wood, thus preventing red mite from passing from cage to nest, or vice versa, and the excreta of young from accumulating at back of nest and cage. It can also be opend or closed to fit varying sizes in nestpans.—H. BLOCKSIDGE.

"AVIARIES, BIRD-ROOMS AND CAGES"

Is the title of

CAGE BIRDS' LATEST HANDBOOK.

It is written by that well-known fancier, Mr. H. Norman ("Cage Birds" Artist-in-Chief) who has illustrated it with a wealth of helpful drawings. It also contains 10 lovely full-page photographic plates.

It must be on every bird-lover's book-shelf

who desires to thoroughly understand the proper Building, Fitting and Management of Aviaries, Bird-rooms and Cages.

Through a Bird-room Window.

By the Rev. C. D. FARRAR,

(Continued from page 359).

CHAP. X.: THE BEARDED TIT (continued).

When I got them home I let them loose in a fair-sized aviary in company with other Britishers, and it was very pretty to see how they explored every nook and corner of their new abode. I could fancy them saying, as I listened to their happy chatter, "Well, this is really something like; and quite reminds us of the Norfolk Broads."

At first, like all the lower orders, they were clearly suspicious of any unknown object. The best rule in such a case is to act naturally, with more quietness than usual, and give them time to forget their suspicions. I did so, and they now creep about my person as if I were of no more interest to them than Alexander was to Diogenes. When I throw down some maggots they come skipping along from bough to bough. "To the discreet belong the spoils" is written in every timorous step and stealthy movement.

They are "cocky" little beggars, and as full of self-importance as the Minister of the two Cumbraes (the miserable little islands off the mouth of the Clyde), who offered up the prayer: "O, Lord, please be gracious to the Greater and Lesser Cumbraes, and in Thy mercy do not forget the *adjacent islands* of Great Britain and Ireland." The Tits seem to say the same to me: "Look after us, and do not forget the rest." They are a most devoted little couple, never apart for more than a few moments, and then never happy until they are together again. If one were to die I do not think the other would be long behind. I never see them making love; it is always there. It reminds me of what a dear old man used to say to me of his love-making: "I didna make it; it comed spontaneous loike."

Living in Hope.

I hope some day to be able to report the successful nesting of this devoted little couple; but then Hope is a hen that lays more eggs than she can always hatch out. I console myself with the thought that there is plenty of time yet, as the parish priest once said to his bishop who had written to him for neglecting his spiritual flock. The letter ran somewhat as follows: "My Lord Bishop—I have received, and beg respectfully to acknowledge your Lordship's letter. I believe that your Lordship can hardly be aware of the condition of the roads at this time of the year. I am satisfied that if your Lordship saw them you would think with me that it is impossible at present for our Great Enemy to reach my parish. As soon as the weather mends and the roads give signs of becoming passable, I assure your Lordship that I will take care to be beforehand with him."

I find my Bearded Tits, while making my soft mixture their staple diet, do not despise Canary and millet seed. They are terribly wasteful where seed is concerned, as they stand in the middle of a full pot and scatter it right and left, like an old hen, until they find a bit that will suit their dainty appetites. I need hardly say that they require a regular supply of live insect food, though this need not be given in any alarming quantities. Still, it must be given "little and often." When seeking this food on the ground they have the same curious habit of scratching, just like Combassous and Whydahs.

For those who are not familiar with the appearance of the Bearded Reedling, I append the following brief description. The length of the bird is 6½ inches, of which the tail exceeds 3 inches; the bill is rather long, thin, slightly curved at the point, and of an orange colour. The eyes are "gravel"; the nape of the neck back, rump, and tail are what we used to call, in Mice, rich sable; over and below each eye is a black marking almost in the form of an acute triangle, hence the name —"Bearded Tit." The throat and lower part of the neck are silvery white; the sides and thighs pale yellow, and the vent black. The quill feathers of the wing are blackish brown edged with white. The lesser coverts are of the same colour; the greater coverts chestnut orange with pale margins. Legs and feet lead colour.

The hen is very easy to distinguish from her mate. She has no cheek marking; the vent is the same colour as the abdomen, and the body colour is altogether paler. Here is the advantage of buying Bearded Tits; you can always be sure of picking out a cock and a hen. The Bearded Tit is even a better hand than an old cock Blackbird at finding cover—and keeping it. No matter how you try to catch him, he will always have something between you and his person. Unless you have tried personally to catch him in the aviary, you have never realized how much good cover there is in an elder bush or even a few bare pea sticks.

The Damp British Climate.

My Bearded Tits live in a large covered aviary, as I have learned now by sad and bitter experience to distrust the British climate, and I know how many promising nests have been sacrificed for being placed sub Dio. About the middle of May I saw unmistakable signs of nest-building, all the German Canary cages in turn were inspected by the cock, meekly followed at a judicious distance by the little hen. They were evidently house-hunting. Already I had visions of little Bearded Tits and medals; but as Mr. Poyser used to say: "Its your dead chicks that take the longest to hatch"; and so the event proved. In this world there's nothing certain but death and taxes. For some days all went well; the Tits were busy day and all day breeding and building. At last a little nest was finished in the old German Canary cage, and then there came a pause, such as one sometimes notes on a lovely summer's day.

I wanted to look inside that nest ever so bad; but prudence held me forcibly back. She argued wisely—if there are eggs, your looking won't alter things, and if there are none you will only be disappointed. I held out as long as I could at the imminent risk of something giving way inside; but on the fourth day I could restrain myself no longer. I took just one peep and to my joy I saw eggs. Eggs—writ large. How many, I had no time to see, but I *thought* three. Now was the crucial time. Would the hen sit? I had had many a bird lay and then refuse to have anything further to do with their eggs. Happily, my little friend was quite normal and sat with the admirable patience of a Dame Partlet.

A Decoration Just Missed.

At the end of fourteen days—to be exact, on the thirteenth evening—the eggs hatched. Oh, how badly I wanted to see the youngsters. My anxiety reminds me of the answer of the Abbè Bourgeois to Prestmitch, who, quite forgetting his clerical character, had asked him to dine on Good Friday. "Malheuresement, les circumstances n' empèchent." It was the same with me. Circumstances unfortunately forbade me to look. I knew that if I did my chances of a medal would be gone; and so I tried to possess my soul in patience. For some days I could tell that all was going on well. The visits to the nest and the food trays were regular and satisfactory. The great difficulty in these cases is to provide plenty of insect food. Gentles are very good up to a point; but after a time the birds seem to sicken of them; at any rate when feeding young. Maybe they know that these gentry (no pun intended) do not altogether suit little digestions. At any rate, I always try to have an alternative diet, as the doctors say. Far away, in a retired corner of Yorkshire (which I shall not name for obvious reasons), I have a dear friend the happy possessor of a wood in which a big colony of wood ants dwell. Year by year, as the season comes round, generously and at great risk to his legs, to say nothing of helping a possible rival to a medal, he sends me a constant supply of eggs. Bearded Tits are particularly fond of these dainties, and so are their young.

As soon as the eggs arrived the Tits were everlastingly at the saucer, busily collecting supplies. It went on early and late, and I began to feel like the man in America, who once actually prayed: "O Lord, give us self-complacency, that most precious of all Thy gifts." But, alas, my self-complacency was premature; all went well for a fortnight. The little birds were then covered with brown quills all over, and looked like little porcupines. The next day I thought that the old birds were not going to the nest quite as often as I should like, but still I hoped for the best—though I expected the worst.

Alas, I was not disappointed. I looked next day, and the youngsters were dull and apathetic; the next day they were "wuss," and the next they were dead! When I took them sorrowfully out of the nest I could tell by their gaunt and emancipated bodies that they had suffered severely from mal nutrition. The only bit of consolation I had was that of the editor when Carlyle died, and who exclaimed: "Thank God, he has died in time for the outer sheet." My only consolation is that I have been able to record this somewhat disappointing experience for the benefit of my readers.

Gently Put.

I was reading a book on birds the other day, and anent Bearded Tits I came across the following cheering sentence: "These birds will not breed in confinement; in fact they can only be kept alive in health by exercising great care and giving a frequent change of diet." Well, I have proved both these statements to be "inaccurate," to use a nice gentlemanly word. I have kept them alive with the greatest ease; and I have very nearly succeeded in getting a medal for rearing the young. What the future may therefore have to unfold—well, nous verrons—we shall see, as the French say. Of course I never may succeed. It may be said to me what Chalk said to Edward Tredgold: "You never will see it. I'll bet you two to one in golden sovereigns that you'll sink into your honoured family vault with your justifiable curiosity still unsatisfied."

Now I had better end, or you will be saying of me what Dr. Woodford of Leeds once said to one of his priests. A dispute had arisen about two men in the diocese. "Now, my Lord," said one, "you have heard this man, and I am sure you will agree with me that he is a decided High Churchman." "Not in the least," rejoined the other. "I appeal to your Lordship to bear me out in what I say. His sermons show him to be what he is—a Low Churchman." "Well," replied the cautious old Bishop, "you say he is High, and you, Sir, say he is Low. Now, for my part, I say that I consider him—Long!"

(To be continued.)

HEALTH & STRENGTH

Deals with all kinds of Athletics, including Football, Wrestling, Boxing, Weight-Lifting, Fencing, Running, Ju-Jutsu, Gymnastics of all kinds, Swimming, &c., &c. Gives free advice on all questions of Health, Diet, &c., to all readers.

EVERY THURSDAY, 1d. Sold Everywhere.

"Woodland Bird [illegible]

This preparation is made up in Powder form and will [illegible] months if kept in a cool, dry place. It contains more nou[rishment] same compass, than any other food on the market.

PRESTON ORNITHOLOGICAL SOCIETY.

This is to certify that the members of the Preston Ornithological Society hav[e] season, and time of moulting, used upwards of 100 lbs. of your Bird Milk (Wo[odland] their cage birds, and feel more than satisfied that it is the most suitable ingredie[nt] This year our birds are larger, stronger and possess more vigour than ever before[.] Signed on behalf of members. W. Haworth, Chairman; W. Lewis, Vice-Ch[airman] J. W. Cleminson, Hon. Sec.; J. T. Swarbrick, Assist. Hon. Sec.

Broughton, Preston. Dear Sirs, I have much pleasure in writing you that t[he] Yorkshire section at the Crystal Palace Show, 1908, were fed with bread colour f[ed] Milk. I used no eggs in my bird room all last season.

I am of opinion that one box containing 1 lb. is equal to 60 eggs; and this is the b[est] Fancy. C. Blackhurst.

Price 1/6 per lb. tin, post free.

Orders taken in strict rotation, so hurry up and be in time for this season; save yourselves pounds and get better results.

Specially Manufactured and Prepared by—

THE CREAMERY CO., Garstang, Lancashire.

DO STARLINGS PREY UPON SKYLARKS?

The appended paragraph was taken from the March 19th issue of "The Northern Herald." Possibly some of our readers may have something to say with reference to the allegations here made against the Starling.

Observers of bird life in the North of Scotland cannot fail to be struck by obvious changes in the habitat of some well-known varieties of songsters. In our own district, old fanciers recollect a time when that loveliest of British birds, the Goldfinch, was so common that flocks of them could be seen rising from fields where thistles abounded. The Gaelic name of the Goldfinch is lasarcoille—"flame of the wood"—and it is an expressive phrase, for the rapid flight of Goldfinches through the trees is a perfect blaze of light and colour. At the present time no Goldfinches are to be seen in this district. Starlings, on the other hand, have increased with great rapidity, and their numbers are becoming almost abnormal, while the Thursh and Sky lark are getting rarer every day. I have a suspicion, founded on general observation, that the Starlings are accountable for the diminishing number of the Sky-larks, for they prey upon the eggs of these birds, and occasionally even interfere with the young broods. It is likely enough that the nests of the Thrush are similarly invaded by the voracious Starling, whilst the Blackbird appears to hold its own against all-comers and continues plentiful in the wooded portions of the northern area.

You Wish You were the Bird!

A writer in a northern journal on the subject of bird and nature photography, speaking of devices such as a stretched skin of an ox, hollow rubbish heaps, and imitation tree trunks, as means of reaching the subjects without disturbing them too much, remarks: A study of the ways and habits of birds and beasts (domestic as well as wild) is very necessary for the designing photographer. Otherwise, he may have an experience which fell to a lady of my acquaintance. She designed and constructed a shelter in the form of a sheaf of grain. Getting inside this, she took it to a field where she wished to leave it for a few days until the birds, etc., might become accustomed to the sight of it, and as she was walking painfully along, able to see nothing more than the little circle of ground at her feet, she was suddenly startled by a great thundering of hoofs, and found a whole herd of young cattle charging towards the curious object. Needless to say, she very soon struggled out of the sheaf, and was very glad to be just in time to escape being rolled over by one of the heedless enthusiastic young beasts.

...s of keeping Foreign Birds.

By DR. T. J. LEONHARDT, Ph.D.

(*Continued from page* 383.)

...w Home.

...that little bird ...e, I put it in a ...in the conserva... ...ot know at the ...k or a hen, it ...s in wings and ...utes after, you ...leasure this little ...ng the well-known ... The other little ...s had soon discovered it, and ... were sitting on its cage looking ...ng, singing, and trumpeting. Suddenly my little patient found its full voice. He went nineteen to the dozen and tried hard to show the others that he was a gentleman and ready to make love to a little hen (widow) who was spending the most of her time on his cage.

I knew he could not fly, so I opened the door just to see what would happen. And as soon as I had opened it, in went the little hen. What joy was to be witnessed. Sympathetically she cuddled up to him, began to plume his few feathers and he plumed hers. I left the door open, but she never attempted to come out again. The next day I found some other visitors in the cage, and my little pair were fighting hard to get all out and not be disturbed. They wanted to be alone. It was decidedly a case of love at first sight. So I shut the door and left them to themselves. They were very tame and looked at me with eyes full of thanks for having kept those intruders at a distance.

My little "Mannie" soon got some quills and then feathers, and when he was well enough I opened the cage again. First the hen came out on the top, and he followed, and from the roof of their "Abode of Love" she explained to him the dimensions of their "Liberty Hall," serving as guide. The pair went from branch to branch on the old vine, and in the evening they had already found a new little home, high up in a cosy little box. There they slept till the morning; and a busy morning it was, too, for they had to make their "little wooden hut" comfortable. So up and down they went with hay, moss, and feathers.

To-day "Mannie" is a beautiful bird, his plumage being like wax, but every time I enter the conservatory he comes down and sings to me and thanks me once more for having rescued him from a certain, bitter, and premature death, for he wanted to live. And I am proud of that bird although you can buy a nice specimen for 2s. or 2s. 6d., that bird is more valuable to me than ten times his real value. Nobody but those who have seen me bringing him the second time to life know how often I got up during the night to see whether the lamp beside which he was placed was not too hot or smoking. I wanted to save that little chap, and there is no end to what one can do with systematic perseverance, even with Foreign Birds.

The Soil-loving Cordon Bleus.

Talking of perseverance, I never thought I should be able to keep Cordon Bleus. I don't know how many I bought of these birds. Once I got six pairs, and of the lot after a few weeks I had only one hen left. Yet I persevered and bought some again and again till I had two pairs left which seemed to thrive. Just a tip when buying Cordon Bleus, or other small Finches. I had experience in that line at any rate. When you enter a birdshop simply say you want to have a look round, then keep your eye on the Cordon Bleus; dont' go too near them, or they will begin to fly about. You ought to try and see if, when quiet, they shut their eyes and keep them closed for a short time. When that is the case you had better refrain from buying or you will lose as many as I have lost. As a general rule I always go by the expression of the eye in birds—and people.

Cordon Bleus are very fond of soil, indeed, and that is very likely the reason why they come to us half dead. For during their long voyage they miss it. My Cordon Bleus spend hours on the soil searching for insects, and I have seen them eat plain soil. One pair is now building and I have never seen a prettier pair, even at the shows, although I say it myself. The cock bird is of a most delicate deep turquoise blue on the breast extending under and below the wings to the tail which is of a paler blue. As to the plumage, there is a difference of colour between some kept in cages and some flying loose. That deep turquoise blue, their fan-like pale blue tail while flying, and the crimson patch on both sides of the head of the cock bird make them look quite gorgeous.

I don't know whether it is commonly known that Cordon Bleus have a very sweet song. The cock bird is often chattering away for a few minutes exactly like a swallow. The first time I heard it I could not quite make out which bird it was that was singing, but after a bit I discovered the little blue cock high up on the vine swelling his throat and singing, ending each time with a very high, long-drawn note. I do not think that they would attempt to sing in a cage; at any rate, I have never heard them utter more than a simple chirp when caged.

The Avadavat Family.

Another very pretty species of foreign birds are Avadavats. Can there be anything prettier, anything more graceful, than a few pairs of Pondicherry Avadavats? They are little birds the size of a nut, the male, in colour, of a crimson red, with white dots. He flutes a delicate song. Only a few days ago I went to a large dealer in foreign birds, and presently a gentleman came in who wanted to know whether they had some very rare birds in stock. The dealer answered in the negative, but showed him the birds he had. When pointing out a splendid lot of Avadavats, the gentleman said, smilingly: "No, certainly not, those are no good, they don't sing." I could not help asking him whether he had ever kept Avadavats, whereupon he told me that they were far too cheap. "Well," I said, "it should not always be a question of money; they are cheap, but nevertheless, they are beautiful, and they have as nice a song as one can wish for." He looked at me full of doubts, and left the shop. How could I dare to praise such "cheap little things," and tell a fact which even he did not know. To begin a successful career as a foreign bird keeper, one ought, in my opinion, first get to know and study the likes and dislikes of more common birds, and from them go on to the rarer kind.

I think I am right in saying that there are three different kinds of Avadavats: first, the brown Avadavat, which never changes its colour. I have kept some of these for three years. They are undoubtedly the best singers. They cuddle up to the hen and suddenly stretch their whole body, and wagging their tail, sing and charm everyone who hears them. The next are the red or Pondicherry Avadavats, which I have described above. Two of these mites sleep, strange to say, in one shell, although there are plenty of "houses to let." When they fly along so silently they always remind me of a moth. Then there are the Green Avadavats, which are much larger than their cousins and have a very pretty plumage. One might feel inclined to call them yellow Avadavats, for they are of a distinct greenish-yellow, and below the wings have stripes of black and white which are very conspicuous and add largely to their beauty.

Waxbills and Nonpariels.

Other very satisfactory birds are the African and Senegal Waxbills, only a little larger than Pondicherry Avadavats. They have built three nests on the floor behind the stems of the vine, and one can only be amazed at their work. The nest is of the size of a large cocoanut, and is made of hay and feathers. They have deserted one nest, and I really thought it worth while to take it and exhibit it in my study as a work of art.

Living Rainbows.

The little Orange Cheek Waxbills remind me often of a Robin. They are very affectionate and come every morning to get a bit of grass in flower from my hand. Of course, I never enter the conservatory without a bit of dainty, and the birds soon get to know it.

I am afraid it would be too long to enumerate many more birds I keep. I should, however, just like to mention my Pintail Nonpariels. Those birds have been lavishly gifted by nature. The cock looks as if a brilliant piece of rainbow had fallen on him. They are very delicate indeed, but once one has succeeded in having nursed and fondled them up into a healthy pair, they are of no trouble. One of my Pintail cocks died from starvation. It was such a beauty, and the hen and he were building a nest. Unfortunately he tried to pull up into the nest a heavy sod of grass and strained his neck. Poor bird, I nearly cried to see him fade away, and yet I could not have ended his pains. I was too fond of him for that.

But I have now another pair which are building. One of my hens had a fit last New Year's night. I found her lying on the floor about 1 a.m. My last walk before going to bed is always in the conservatory to see whether they are all alright. I picked her up and brought her in. I thought she was dead, yet her body was still warm. So I just left her lying on the table, and went for some brandy. I put it on her nostrils and a thing occurred which I never thought possible; she actually came round again. I then put her in a small cage, wrapped it in shawls and placed it on the stove, which was still a bit warm. The next morning she was quite herself again, and since then she has never ailed anything.

I should like to have talked of my other birds; for instance, of Combassous, Nuns, Paradise Whydahs, Madagascar Weavers, Bengalese, Fire Finches, etc.

Rudge-Whitworth
Britain's Best Bicycle

The Cyclist's Encyclopædia.

By Appointment

The more you know about cycles, the more you need this valuable book. We will gladly post it free.

64 pages fully illustrating all the latest cycle improvements—variable gears, featherweight roadsters, all-steel flush-joint frames, patent rust-proof celluloid finish, etc.

Eiffel Tower Lemonade

A 4½d. bottle makes 2 gallons of delicious home-made Lemonade.

Health in every sip, refreshment in every drop.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given each week for the best three anecdotes about birds written on postcards. Competitors must be children under sixteen years of age, and must state from where stories are taken.

Two stars indicate the Winning Contribution; one star the runners up.

*The Easily-caught Greenfinch.

The other dinner time, to my surprise, I saw a Greenfinch hopping about on some ivy outside the window trying to get at the Canary, which we had hanging in the window. I took the Canary down and put it just inside the kitchen, and then opened the door. As soon as the Greenfinch caught sight of the Canary it flew in. Then I shut the door and caught the bird. As soon as it was in the cage it began to eat.—Tom Haddon, 11, Melton Street, Kettering, Northamptonshire.

Our Favourite Skylark.

One day while I was walking through a field at Bedside, I noticed a bird lying on the ground, apparently dead. I picked it up, and found it was a Skylark. It had an injured wing, which seemed to have been done by a catapult. I took it home, and the wing got better, and the bird turned out a lovely singer. One fine day, while it was hanging outside, a cat pulled the cage down and killed it. The body was too mutilated to be stuffed. Sent by John Weighell (age 13 years), 31, North Terrace, Bedlington, North.

*Bullie Comes Home.

We have a Bullfinch, which is two years old. One day last summer, when my father was cleaning out his cage, he hopped out and flew through the open door into some gardens, a hundred feet away. We thought we should never see him again, but about two hours after, while we were having dinner, a thunderstorm came on, and you can understand how surprised we were to see our Bullie fly straight in and pitch on the table. Father said it was the storm that drove him in.—Sent by Percy Dibsdall (age 10 years), 97, N. Allington, Bridport.

**Our Knowing Little Thrush.

I have a Thrush; he is a great pet and so very tame. I took him from the nest, and he knows us all and is not afraid. He sings beautifully. I call him Joe; when he wants food he picks a large piece of grit from the bottom of his cage, and knocks with it on his food glass. If it falls out of the cage, he pokes his head through the bars, as much as to say, "Pick it up for me, please." He takes meat and worms from our hands, and seems to love us as much as we love him, for he sings so merrily when we are playing near his cage.—Sent by Doris Lycett, age 11 years, Apidalo View, Chesterton, Staffordshire.

Hints to Novice Canary Breeders.

By J. C. BARNES.

To bring a bird into the robust condition of health required for the breeding cage, nature needs a little help in many cases. A little soft food by way of egg (hard-boiled) and bread-crumbs, with a pinch of mawseed and soft sugar added, is very beneficial, say, half-teaspoonful per day per bird. A tonic of some description is also advisable, say, five drops of gentian and ten drops of tincture of steel in every ounce of water or thereabouts, three times a week. Should this be followed out, the condition of the birds will improve quickly, as a rule.

It is advisable to attend to the cock-birds most, as the hens are best left to come on more gradually. It is an advantage to give your hens a little inga (or niger) seed about three times a week; this helps to avoid egg-binding. Staple food for both cocks and hens should be good, sound, Spanish Canary seed, with a little German summer rape, the latter two or three times a week. Sweet apple, placed between the wires, is relished greatly, and the acid in the same is good for the blood.

During frosty weather, I never give my birds the water straight from the tap; I always make it luke-warm, and I find by so doing I am hardly ever troubled with inflammation in my birds, as is often caused by administering icy cold water. This is worth following out; it pays, I can assure you.

Let your birds have as much room as possible, especially your hens. There is nothing better than plenty of flight-room. Exercise is very beneficial, and birds that can enjoy such never, or hardly ever, get too fat. You don't want your birds fat for success in the breeding-cage. Mind you, I like birds to feel plump, but there is a difference between plumpness and fatness. Fatness is in many cases the cause of egg-binding, and of hens dropping off (dying) on the eve of laying.

On nice bright days supply a bath of tepid water, both to cocks and hens; all your birds will be the better for it. Always hang on the bath in the early part of the day, so that when they have finished "plunging" they may have ample time to dry themselves previous to their "bed-time." Let your birds have plenty of fresh air, but avoid draughts.

Some Important Items.

When you are pairing your birds together, see to their claws. Cut all that are long and liable to prick their eggs, but be very careful in doing so. On observation you will find how far the blood runs into the claw, so cut accordingly. For all birds that have a tendency to carry too much feather, it is advisable to clip away the same from around their vent. Superabundance of feather in this locality is, in most cases, the cause of so many clear (unfertile) eggs. The beaks of the birds are also an item one must look to. Beaks that are allowed to grow long are very sharp, and spoil many a clutch of eggs; therefore reduce them somewhat with a pair of sharp scissors.

As to food, when youngsters appear, the following should be given: Egg and bread crumbs mixed, and hemp seed, along with ordinary Canary seed, for the parent birds to feed upon. When the youngsters are three days' old, you can give with advantage a small quantity of dandelion or watercress (little and often), and German summer rape that has been previously boiled for about 15 minutes (teaspoonful per day for each pair of birds).

Don't pair up your birds too early, but have patience. New beginners, I know, are very anxious to get going, but East winds and frost are very often knocking about in March and also in April, so it pays one to exercise patience and wait a little longer, than to go headlong into disaster; nothing is more detrimental to success in Canary rearing than east winds and frost.

I always leave the cock bird with the hen during incubation. Should the former behave himself and not molest his mate, I contend that two feeders are better than one. If the cock bird is mischievous at all, out with him clean away from the hen; she will bring up the brood all right; don't be afraid to move him. Many times have I been asked if I approve of one cock running with two hens? I must admit I am not in favour of it. I believe in keeping one cock bird with one hen; the progeny are then far stronger and larger than if you run one cock bird with two hens. That is my experience, anyhow, and I would advise this.

Some Nesting Matters.

White earthenware or terra-cotta nest-pans (perforated) I prefer to all other kinds for building in. They are round, and do not harbour filth, as do the square boxes, and they are also cooler. I generally line mine with felt linings, fastening them in with ordinary paste. I give the birds a little moss and cow hair to play with. When sitting my eggs, I dust well inside the nest with Keating's insect powder; this keeps down "red mite" should there be any lurking about. When the eggs have been under the hen, say, eight days, I give another good dusting with the powder, and again the day previous to the eggs hatching. By this procedure you will be troubled very little with insects.

When the youngsters are about eight or nine days' old, should their nest have got fouled very much, it is advisable to replace with a clean nest. At the age of 28 days all young birds can be taken away from their parents, and placed in a flight or large cage; they will be able to manage then for themselves. Provide them with the ordinary egg food and crushed hemp seed for the first few days, and gradually wean them off this on to hard seed. Do it by degrees, and don't be in too great a hurry, for fear of bringing about mishap to their digestive organs.

Don't give any green food until after they have moulted. Young birds are very liable to gorge with greenmeat, and this causes diarrhœa and inflammation. In their drinking-water you can give a little Parrish's chemical food, so that they can just taste the same; this helps to steady them from drinking too much, and at the same time is strengthening.

Keep their cages scrupulously clean, and leave no waste matter about. The youngsters that possess show points begin to train in their infancy, by running them into show cages as often as possible. When the Nest Feather Shows come about, have a flutter, and see what they are capable of doing on the Bench. If you should win with them, all well and good, but if unsuccessful, inquire from the judge what they lack, and he will be only too pleased to explain to you their deficiencies. When your young birds attain the age of about nine weeks, place them on weak colour food, gradually working it up to full strength.

Luminous Birds.

The luminosity of the plumage of birds appears to be more frequently seen in the Herons than in any other species, and has been noticed both in the old and the new worlds. The Blue Heron of America gives off this peculiar light more than any other, and a famous American naturalist records having been attracted by an intermittent light, which he found to proceed from the breast feathers of the bird. He attributed this to the presence of powdered or pulverised barks of the feathers, which could be somewhat controlled by the raising or lowering of the feathers. This luminosity of plumage ceases after death. In Norfolk a luminous Owl has caused considerable interest recently. This, like the blue Heron of America, lost all speciality when dead, and appeared simply an ordinary dead bird.

Bird Visitors to the Elms.

Trees appear to be indispensable to the majority of birds. Knowing this, we naturally go to the woods and hedgerows, whenever we wish to watch the doings of the wild birds that perch. The Plovers, Snipe, Teal, Wild Duck, and many of the Wagtails and Pipits are to be met with upon the marshes, and even there we may with advantage watch near a clump of trees (of which there are generally one or two), as by so doing we get many more species within view, in a given time. If the bird-lover is able to have a few trees constantly under observation, it is astonishing what a number of birds visit them from time to time, although at a casual glance they may appear very little favoured. As a rule, small trees and bushes attract the feathered creatures more than large ones, excepting where such trees are in a direct line of flight, close to a common feeding ground, or occupying some prominent positions from whence the surrounding country can be kept under observation. In a corner of the old park is a clump of venerable elms with a few equally ancient walnut trees among them; they stand upon rising ground and command a clear view of the park and village. These trees are in sight from my windows and garden, and at any time one may see some signs of bird life among them. At present they show very little evidence of spring verdure; there is just a thickening of smaller twigs at the extremities of the branches, showing a brownish tinge, only perceptible in certain lights, where the swelling buds are getting ready to burst into leaf when the weather is more congenial than it is at present. Looking across at the trees in the uncertain light of a dull spring day, I can see a dark-coloured bird popping in and out of a knot hole in one of the thicker branches of a walnut. He does not stay long in the hole, only perhaps while one can count ten or even less; then out on the branch and back again. It is a Starling looking for a nesting site! He is too far away f… ing; he simply lo… we do not mistak… He is differently … and the habit of e… foreign to the tur… pair of Wood Pigg… the strong east wi… turning, beat back to a … of the elms, they run up the b… extremity, where possibly they ha… uninterrupted view of the district. … Pigeons are much more cautious when the trees are bare of foliage than they are in the summer and autumn; then, they are hidden by the dense foliage and are safe from detection while remaining quiet. We know that these birds are Pigeons by their buoyant flight, rounded contour, and strutting manner of walking up the branch. They are common in the district, and one or two are generally to be seen about these trees. A pair of Jackdaws have persistently hunted through the timber for a nesting site, but somehow they do not appear to find one just to their liking, as they have not been such frequent visitors this last few days. Their love-making is noisy and accompanied with considerable chasing and buffeting. So determined is some of this play that one would sometimes think they were fighting. Upon bright sunny days the "pink, pink" of the Chaffinch is frequently heard, and it is just possible the beautiful nest may presently be hidden against some moss-grown trunk, where with an exterior of moss and lichen it will be difficult to locate. The Greenfinches are frequent visitors, and they accompany the hordes of Sparrows to the neighbouring gardens. All the Tits have from time to time been seen there, and the loud call of the greater is sounding even now. In the early morning and at sundown it is good to listen to the cheery song of the Thrush, and the more liquid notes of the Blackbird, for they love the elms, especially he of the golden bill. The observant poet says: "The mellow Ouzel fluted in the elm."

NOTES AND QUERIES.

A Persistent Songster.

The song of the common Hedge Sparrow can be heard in every month of the year, a record which few birds possess.

The Shorelark.

It is said that these birds are gradually extending their range westward. If so, we may possibly expect to see them visit us in the autumn in greater numbers. They must be exceedingly hardy, for they nest above the forest line in northern Europe upon the open waste, practically exposed to arctic weather.

Our Departing Birds.

At first sight it is strange that such birds as the Fieldfare, Redwing, and Bramblefinch, which visit us in winter, should leave our shores, just as summer is coming, to take up their residence in the north for the purposes of nesting. The two former are so closely related to our familiar Missel and Song Thrushes, and, the Bramblefinch to the Chaffinch that where one of these birds thrives, it is only reasonable to think the other could. Yet of all the thousands of Bramblings, Fieldfares and Redwings that we have seen during the winter, one can safely say not a pair will remain to breed. No doubt a pair or two have stayed behind at some time or other, but they would only be the exception, and a single nest of either would not make the bird a breeding species. I have somewhere read in one of Jeffries' books of his recording a nest of the Redwing.

The Indian Crows.

Gamekeepers just now are jealously watching the doings of our Rooks and Crows, for their thievish prying habits are detrimental to safe game preserving. They must thank their stars however, that they do not have to deal with such birds as the Crows of India. These consist of one bird all black, and one grey-necked. Both are vagabonds of the worst description. Did the Black Crow alone exist, it would be considered the emblem of all that is evil and mischievous, but its iniquities pale into insignificance beside those of the grey-necked bird whose specific name is, curiously enough, "the splendid." He is a villian of the deepest dye, and commits acts of vandalism out of pure malice. He is a terror of the gardener, for he roots up his choicest seedlings, nips off the most beautiful flowers, and flies off with the labels attached to the plants. He has been known to help himself to the contents of a basket carried upon the head of a native, being artful enough to refrain from alighting, but flapping along just above, keeping pace with the carrier. The pet dog when fed finds a Crow pecking his tail; he naturally turns to punish the offender, when another imp of Blackness flies away with his food. They mob every strange bird, and all together enjoy life in their Crowish way immensely.

An Ancient Heronry.

Windmill Hill, Sussex, is supposed to be the oldest existing heronry in England, as it is recorded in a survey of the district made in the time of Queen Elizabeth, when it had about 150 nests. In 1879 it possessed fifty and at the present time only thirty. At this rate the heronry will be extinct in less than another fifty years. Possibly there is some local destruction going on that should be checked. I once knew a taxidermist who shot these birds at sight, and he stated he had set up a hundred within a few years. It is this persistent killing of the birds that makes certain species rare.

YORKSHIRE CANARIES.

HOW TO BREED, MANAGE AND EXHIBIT.

By H. W. BATTYE (President of the Yorkshire Union Illustrated by Messrs. H. Norman and A. J. Simpson.

Price 1/- nett. Post Free 1/1½.

This book is absolutely the very best that has been put on the market. It deals fully with the Yorkshire and its sub-varieties, and should, without doubt be in the hands of every breeder of the bird of Grace and Beauty. It contains instruction upon Pairing, Breeding, Moulting, Exhibiting and how to treat this popular variety in both health and disease.

Popular Book. Popular Price. 1/- nett, by post 1/1½.

"CAGE BIRDS." 154, FLEET ST., LONDON

THE FIRST STEP.

...very walk of life it is THE FIRST STEP ...AYS THAT COUNTS! Take your first step ... right direction and your right destination will quickly loom ahead.

The First Step that any beginner in the pleasurable and profitable art of Canary Breeding ought to take is to PURCHASE

THE BEGINNERS BUDGET

consisting of FOUR BOOKS ABSOLUTELY INDISPENSABLE TO THE TYRO and completely illuminating the darkness of ignorance in which he may otherwise wallow.

THESE FOUR BOOKS have been written and compiled by men who have devoted their whole lives and every moment of their time to the study of the problems that beset the breeders of Canaries and other birds. Inside the eight covers you will find

ALL YOU REQUIRE TO KNOW

a grand encyclopedi... of bird fanciers' knowledge.

The price of THE BEGINNERS' BUDGET is the moderate one of

(POST FREE) 2/6 (POST FREE)

Here are the names of the Four books and something about each of them:—

Canary Breeding for Beginners -- Post free, 7d.

By Claude St. John.

A practical, up-to-date guide to the cult of Canary breeding, designed specially for the use of the beginner in the hobby. It contains many helpful illustrations, and deals very fully, and in an easily-understandable manner, with the choice, sexing and mating of the birds, feeding for condition, the cages and their fittings, the bird-room, egg-food, nest-building, rearing and moulting the young, colour-feeding, training for show, and all the details and difficulties likely to confront the breeder.

House's Canary Manual - - - - Post free, 1/2

This is a thorough and practical guide to the general management and breeding of Canaries, written by a well-known expert and judge. It contains chapters dealing fully with the breeding, etc., of every member of the Canary family, and an illustration of each bird, by the master Canary artist, Mr. H. Norman, reproduced in the finest art style. There are also exhaustive chapters on aviaries and cages, breeding procedure, moulting, exhibiting, diseases, and seeds—a compendium of knowledge approached by no other book of its kind at the price.

Cage Birds 1908 Annual - - - - post free 7d.

The Standard Guide to the Cage Bird Hobby is a title bestowed upon the ANNUAL years ago. And the 1908 edition merits it more than any previous volume. Revised and brought up-to-date from cover to cover, with a lovely coloured plate and many full-page art illustrations, and crammed with valuable articles and unique and helpful features, it is the finest value for money ever offered lovers of birds. Canary, British, Hybrid and Foreign bird enthusiasts alike will find it a Complete Guide to the Fancy.

The Stock Book (Our Invaluable "Breeding Room Register.") - - - post free. 7d.

A well-known fancier has said of it:—"It makes bird-breeding easy." This book is one no breeder of birds can possibly afford to be without. It simplifies the operations in the bird-room and makes it possible for everyone, even the veriest novice, to breed his birds as they should be bred—keep account of their strong and weak points. It contains both Pedigree, Breeding, Young Bird and Show Registers of simple and unique character, in addition to useful account pages, and many invaluable "Hints for Emergencies."

ALWAYS USE OUR DEPOSIT SYSTEM.

We are not responsible for the state
nts made in advertisements, nor for
e *bona-fides* of either buyers or sellers.
all transactions the adoption of our
eposit System should be insisted upon.

IMPORTANT.

ND THE FULL COMMISSION.— If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

OW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should nd to this office the amount of the purchase (our eposit fee included), and at the same time he should nmunicate with the seller, stating what it is he equires sent on approval. We acknowledge receipt f the deposit to both parties. In all cases the epositor should give his name and address, and so that of the vendor, and must write same clearly nd distinctly.

2.—END OF TRANSACTION.—The deposit is re- ained by us until we hear from *both* parties that he transaction has been completed. If a sale has een effected, we hand the amount deposited to the eller. If a sale has *not* been effected, we return the mount to the depositor. The transaction must be onducted by the parties themselves. We merely old the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for ach £1, or fraction of £1, and it must be sent t same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together, and, after the first eighteen words, are charged at two words a penny, but no single advertisement, even if accompanied by others, will be charged at less than the minimum price, viz., Fourpence.

Headlines or Footlines 6d., 9d., 1-, 1 6 according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL.

The Proprietor reserves the right to refuse any advertisement, or to cancel any advertisement ordered for a series, at any time, without assigning any reason for so doing.

Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154 Fleet Street, London. Terms for Display Advertisements on application.

J. SANDIFORD, CANARY BREEDER
Established 1879. **PRESTON, LANCS.**

HUDSON'S CHAMPION YORKSHIRES

are what you want if you want to breed your own winners, bred from or related to winners at most of leading shows, Bradford, Windhill, Shipley, Laisterdyke, Palace, etc. I have a few pairs in clears, ticked, marked, colour-fed and natural colour cocks, 8/6, 10/6, 12/6; hens 6/-, 7/-, 8/-; pairs matched to breed winners at 10/6, 12/6, 15/-, £1; cold room bred and kept ready for breeding. I have received scores of testimonials for this strain, three days' approval. I desire no man's money who does not get satisfaction; stamp reply.—Hudson, Confectioner, Thackley, Bradford.

LOOK HERE!

Is this a fair offer? I will send you good long slim Yorkshire Hens, any colour, Yellows 4/6, Buffs 4/-, or I will send you grand matchd. pairs, tip-toppers for style and quality, and from some of the best strains in Yorkshire, 12/6 to 15/-pair; sure young feeding hens 3/- each, on approval, deposit. **J. THOMAS, Amblerthorn, Near Halifax.**

THE NOTED PARAGON YORKSHIRES

Having won the much-coveted £21 Yorkshire Challenge Cup, 1908, for the fourth time, is ample proof that the "Paragon Strain" is what the name implies, viz., the best of its kind the world can produce. I am the only exhibitor that ever won this valuable trophy outright, namely in 1903-4-5. I did not compete the two following years to allow others to come to the front. In 1906 I secured the Cinnamon-marked Trophy, and in 1907 I won the "Amalgamated Yorkshires," 25 guinea Challenge Trophy. In two successive years at the Crystal Palace my birds were awarded 13 firsts, and other prizes, including about 20 cups, medals, and specials, such a record has never been equalled by any other firm or fancier of the present day. The above are incontrovertible facts, and are not wild, exaggerated statements of advertising bluff and bounce to catch the inexperienced fancier. My birds come to the front year by year with the same regularity as one day follows another, thus proving beyond questiou that pedigree breeding is the royal road to success, as blood is bound to tell. I have bred and sold more noted winners during my career than any other firm. One client alone who had all his birds from me, won in his first season 63 specials and prizes. Further comment would be superfluous. I have for disposal some of the best that money can buy for length, style, position, and quality they cannot be excelled. Cocks, hens, or matched pairs to breed the best, prices reasonable; three days' approval; stamped address for particulars.

W. H. SHACKLETON,
South Bank House, WIBSEY, BRADFORD.

Various Canaries.

SEVEN cinnamon and cinnamon-bred cocks, 1907, Norwich type, 30/- the lot.—J. Branch, 24, Greenman-lane, Ealing.

DEALERS, HAWKERS AND TRADERS

in African grey Parrots, should send at once for wholesale list; another large consignment just arrived.

ADAMS, PARK PLACE, LIVERPOOL.

COKERNUT HUSK NESTS.

Remember, my "Improved Secure" husks are made up, bored, and wired together differently to any others advertised. For 16 years they have been acknowledged unequalled for successfully rearing Budgerigars. I have sold more than all other advertisers combined. All the principal zoos and parks use "Secure" husks. This is what the Press thinks of them. CAGE BIRDS says they are "far superior to the old husks." Feathered World says "undoubtedly the new husks are far superior to the old." Exchange and Mart says "they are very superior to the old style, which often fall to pieces." They have distinct advantages, and are absolutely unbreakable, so don't be gulled. Comparison and competition always increase their popularity. They are entirely different to all others, and are sold only by me. One quality only, the best; 4/6 dozen, smaller quantities 5d. each. Instructive pamphlet, entitled "Budgerigar Breeding," free on application. Superior Cockatiel box nests, 1/6 each.

HARPER, Adelaide Villa, Dudley Rd., WOLVERHAMPTON.

PAYNE & WALLACE

(THE BUSHMEN),

LITTLE ZOO, BATH,

A large collection of Australian Finches, Parrakeets, Pigeons, Doves, Budgerigars, Lizards, etc., Amazon Parrots. Prices on Application

PARROT PROBLEM

solved. For full proofs send postcard at once for my large book, "Parrot Prattle," now containing 168 pages. This is the most wonderful book ever offered free of all charge to all Parrot fanciers. (This "Parrot Prattle" is registered copyright, and all infringers and imitators will be proceeded against). It contains hundreds of testimonials from all parts with full names and addresses, many interesting facts, and gives valuable advice and hints to all Parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

AFRICAN GREY PARROTS.

Intending purchasers of the most interesting of all birds should make strict inquiries before buying of so-called large importers, as I am the largest, and at present have the largest variety of African Greys and Amazon Parrots and other Foreign birds in Liverpool. 300 West African Grey Parrots, for shopkeepers and hawkers, 10/-, 12/-, and 15/- each; Australian Grey Parrots, 10/-, 12/-, and 15/- each; young Amazon Parrots, 15/- and 20/- each. Special notice to those who have been disappointed in keeping Grey Parrots, 25 beautiful young South African Silver Greys, with full wings and bright crimson tails, not a feather displaced, finger tame, whistling, and commencing to talk; these birds have been specially imported for me from the Congo River, and are the king of all talking Parrots, 30/- and 35/- each; safe delivery and stamped guarantee sent with each bird; talking Military Macaw, 45/; talking Lemon-crested Cockatoos, 35/-; absolutely the best talking Amazon living, £10; another good talker, £5. Small Foreign in great numbers. Parrots cages, 4/-, 7/-, 10/-, and 20/- each.

BOOKLET FREE.

Finest Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

SINGING CONTESTS.

BLACKBURN.

The Blackburn Linnet S.A. held their All-England singing contest for quality on April 18th at the club headquarters, Old Red Lion, Snigbrook, Blackburn. There were 43 birds which competed for seven prizes. 1st prize, timepiece, valued 21/-, and 3rd, H. Heaps; 2nd, W. B. and D. Bentley; 4th, T. Pickering; 5th, W. Barnes; 6th, R. Holden; 7th, P. O'Neil. Judges, Messrs. J. Dobson, G. Rostron, G. Jump. Timekeeper, W. Wrench.—RD. HAYHURST, Sec.

The Blackburn Lark F.A. held an open special sing on April 18th, at The Good Samaritan Inn, Grimshaw Park, where a very interesting afternoon's sing was gone through, 23 birds competing for eight prizes. The following were prize winners:—1st, S. Fletcher, 9-35; 2nd, R. Sheffield, 9-20; 3rd, G. Knowles, 9-2; 4th, J. Hunt, 9-17; 5th, J. Sheffield, 8-36; 6th, R. Sheffield, 8-12; 7th, J. Abbott, 8-2; 8th, N. Jackson, 7-41. Timer, Greenhalgh; booker, R. Sheffield.—JOHN SHEFFIELD, Sec.

LEEDS.

Stead. Judges, T. Summers, C. Cooper. Also on April 18th, when 28 birds sang in heats for three good prizes. 1st, T. Stead; 2nd and 3rd shared between F. Galley, D. Clegg, and T. Stead. Judges, T. Summers and H. Hayes; timekeeper, W. Fisher. Also April 19th, when 30 birds sang. 1st, T. Johnson; 2nd, C. Biss; 3rd shared between W. Naylor and T. Stead; judges, T. Summers and C. Cooper. Also on Easter Monday, when 36 sang for three good prizes. 1st, C. Biss; 2nd, S. Hardcastle; 3rd, T. Stead; judges, C. Cooper, B. Mawson, H. Hayes.—T. SUMMERS, Hon. Sec.

CROOK.

A Linnet singing contest was held on April 18th at Royal Oak, Crook, when 40 birds sang, with the following result: 1st and 3rd, Bailes; 2nd, W. Holmes; 4th and 5th divided between Cole and Hutchinson. Judge, Geo. Reed (Brandon); timekeeper, Wm. Rutherford; bookkeeper, Wm. Fairless (Brandon).—W. RUTHERFORD.

NEWTOWN (Leeds).

Usual week-end contests took place at the Prince Albert Inn L.A. The results were as follows:—On April 11th judges were Messrs. W. Hinnson and W. Dean. Result: 1st, J. Chippendale; 2nd, J. Sellers; 3rd, W. Farrar. Also on April 12th, when 16 birds competed. Judges, Messrs. E. Wood, B. Jackson, and H. Allen. Result: 1st, A. Binner; 2nd, C. Lorriman; 3rd divided between F. Callaghan and W. Turner. Also on April 18th, 13 birds competing. Judges, Messrs. E. Wood and B. Jackson. Result: 1st and 2nd divided between A. Binner and J. Chippendale; 3rd, J. Sellers. Also contest on April 19th, when 27 birds faced the judges, and some very good singing was heard. Judges, Messrs. B. Jackson and G. Towers. Timekeeper, Mr. E. Wood. Result: 1st, W. Neat; 2nd, H. Bryan; 3rd, A. Binner.—E. WOOD, Hon. Sec.

YORK.

The usual weekly contest was held at the Bricklayers Arms on April 18th, when 24 birds faced the judge. Result: 1st, A. Chaplin; 2nd, J. Evans; 3rd, Sykes; 4th, Laverick; 5th, H. Allan; 6th, Moley Lambert, sen. The 31st annual Easter Linnet singing contest was held at the Bricklayers Arms on Easter Monday, when upwards of 30 birds faced the judge. The following are the results: 1st, J. Limbert, jun.; 2nd, A. Chaplin; 3rd, Joe Whitehead; 4th, J. Moore; 5th, G. Horwell; 6th, Geo. Key; 7th, Thos. Spence; 8th, T. Lightfoot; 9th, T. Masheder; 10th, Joe Andrew. Judge, Mr. J. Paver; timekeeper, Mr. J. Lambert, sen.—WM. EMPSON.

CLUB REPORTS.

BELGRAVE AND DIST. F. AND F.S.

A meeting was held on April 14th. A table show of British birds A.S. was held, with the following result:—1st and 3rd, Coddington; 2nd, Agar. Mr. Shepherd judged.—W. H. RILEY, Secretary.

CINNAMON CANARY CLUB.

Election of officers for 1908:—President, Mr. W. A. Bladen; vice-president, Mr. J. Jones; committee, Mr. W. Dormer, 23 votes; Mr. E. Godley, 21; Mr. C. L. Quinton, 16; Mr. A. Bentley, 12; Mr. F. W. Baker, 11; Mr. W. Milburn, 9; Mr. O. Handt, 8; and Mr. J. H. Roe, 8; auditors, Mr. T. Heath 17 votes, Mr. J. Dobson 14; judges, Mr. T. Heath 22, Mr. J. H. Roe 22, Mr. J. H. Payne 19, Mr. J. Robson 18, Mr. H. W. Battye 17, Mr. J. Dobson 16, and Mr. E. Godley 16; hon. secretary, Mr. R. J. Pretty. Forty-one voting papers issued and twenty-eight returned; one spoilt.—Signed, Th. Heath, J. Dobson, scrutineers, March 15th, 1908.

LEITH JUBILEE O.S.

Monthly meeting held on April 7, Mr. Begg, the President, in the chair. The President moved that we elect judges for our forthcoming show on October 17, after which the secretary received entrants of hens; 155 were booked—a slight decrease on last year's number. But if all the fond hopes of members are realised, there will be a good many birds of circle and top end bred from some of this lot, as though the "Jubilee" is not numerically strong they have always stood their ground when meeting their neighbouring club members in open competition. Mr. Petrie promised to give us a lecture on "Hybrids" at our meeting on May 5th.—JAS. SINCLAIR, Secretary.

WIBSEY AND DISTRICT C.B.S.

Members were entertained to a splendid lecture on the breeding and rearing of Canaries by Mr. J. S. Clarkson (Halifax), on April 4th. Mr. Clarkson touched on the money-making side of the Canary Fancy as a hobby, and also gave hints to young breeders (of which we have a large number) with regard to the selections of stock for breeding purposes and the rearing of young birds in the nest, and after leaving the old ones. Mr. Clarkson also touched on the ailments which young birds are heir to, and gave us his ideas as to the causes and cures of same. A very interesting and instructive evening was brought to a close by a hearty vote of thanks to the lecturer.—E. W. JOHNSON, Hon. Sec.

GREENWICH AND DEPTFORD C.B.S.

Owing to the change of secretaryship, the meetings of the above Society have been held rather irregularly since the end of 1907. Now that we have a new secretary, we shall hold our meetings as formerly, on the second Thursday in the month, when we trust all members will give their whole-hearted support. A successful meeting was held on April 9th, when it was announced that Mr. S. S. Stidolph had again consented to be our President. The business of the evening was the election of officers. Mr. F. Meades was elected chairman, and the following gentlemen were elected members of the Committee of Management:—Messrs. Allison, Hack, Hill, Kidman, Putner, and Simants. Members are requested to watch for the announcement of our next meeting.—F. W. HAMER, Hon. Secretary.

CITY OF HULL C.B.S.

Usual monthly meeting held in the Oddfellows' Hall, where 33 members assembled to take part in a discussion on the rearing and feeding of young birds, together with the best means of colour-feeding for show purposes. The chairman, Mr. D. Hope, asked Mr. Harland to introduce the subject, which he did in a very clever way, beginning with the preparing of birds for breeding, and the various ways and means of dealing with them throughout the season, and finishing up with his own idea of colour-feeding. He was closely followed in his remarks by those present, and several questions put to him were answered to everyone's satisfaction. Mr. Oliver also gave his style of dealing with this momentous question. This fancier does not use an egg mill or sieve for egg, using an ordinary dinner fork to crush it; he demonstrated it to the audience present, who were surprised at the case with which it broke up. A few members have got young birds, but the majority are content with eggs if this cold weather lasts. Next month the first Nest Feather Show will be held, and we hope to see a few nice birds there. Members should remember "The early bird catches the worm."—F. H. STAMFORD, Minute Secretary.

CINNAMON MARKED YORKS. C.C.

The annual general meeting was held on April 11th at the Market Tower, Bradford. There was a good attendance of members. Mr. Greaser, president, was in the chair. The minutes of the last committee meeting were passed, as was also the balance-sheet for 1907, which showed a surplus. An honorarium of 30s. was given to the secretary. Mr. W. Gledhill (Huddersfield) was elected president for 1908; vice-president, W. Richmond (Rodley Crofich); trustees, J. E. Brotherton and R. Sutcliff; auditors, H. H. Tower and J. H. Hahnesheur; with the following committee: J. Hartley, T. Odgen, F. Hammond, R. Sutcliff, F. Armstrong, R. Lemmett, J. Wilcock, E. B. Denton, A. Haigh, T. Bentley, H. H. Towers, W. Crabtree, A. Hirst, A. Blakey, J. Greaves, J. S. Clarkson, T. Portman, W. H. Shackleton, D. Mallingson, A. Dearden, J. W. Wharton, A. Cooper, J. W. Lawford, F. Richardson, Gibbons, J. Norris, R. Halliday, H. J. Chittenden, and R. Garnett, 17, Woodmill-terrace, Windhill, Shipley, secretary and treasurer. We had a very able discussion on the wording of our classes, and the following was adopted: That societies applying for the patronage of the club must make at least four classes for Yorkshires as follows, Cinnamon uneven marked Yellow Yorks, cock, ditto Buff, ditto Yellow hen, and ditto Buff hen. If any society obtaining our patronage will make two classes as follows: Cinnamon ticked Yorkshire cock and Cinnamon ticked Yorkshire hen, the club will bear half the loss, if any, in these two classes; they must not apply later than the last Saturday in July, and must state the date of show and the judge appointed for our classes. All application for the winter shows will be considered on the first Saturday in July or early in August in each year. The members also decided to give specials in first feather shows, if the societies make two classes for Cinnamon-marked Yorkshires (open). Applications for these specials should reach me not later than May 23rd next, when they will be put before our committee. The following gentlemen have promised special prizes or cash towards our competition prizes for next season shows: Messrs. Ramsden, R. Sutcliff and Son, J. W. Wharton, T. Bentley, Ogden Bros., A. Blakey, J. Greaves, H. Simonett, A. Cooper, A. Hirst, and Mr. F. Carl, of CAGE BIRDS, and as we shall be at extra expense in guaranteeing classes etc., this year, I hope other fanciers will help us. Votes of thanks to retiring officers concluded the meeting.—R. GARNETT, Secretary.

EDINBURGH NORTHERN O.S.

Next meeting will be held on May 4th, in Tow's Coffee Rooms, 112, Rose Street, at 8 p.m. Young members invited to join. Classes for Scotch Fancy, Norwich, and Border Fancy Canaries, British birds, Variety and Mules. Any other information can be had from the secretary, THOMAS PURDIE, 42, Stewart Terrace, Edinburgh.

BURNLEY C.B.S.

A tea social and presentation was held on Good Friday on behalf of our late secretary and steward, Messrs. John Bee and Alex. Whitehead. Mr. J. Haylurst, after a few remarks, made the presentation of a pair of beautiful bronzes to our late steward, and a splendid gold albert to the late secretary, both subscribed to by our members. After this we sat down to a splendid tea provided by Mrs. Huggins, one of our fanciers. After tea we had a splendid evening's enjoyment.—G. WATSON, Sec.

ACCRINGTON AND DISTICT C.B.S.

We had our monthly meeting on April 9th. After the business had been gone through, and Mr. L. Lane (Barnoldswick) had been accepted as a member of our society, we had an excellent lecture on British birds by Mr. D. Bentley (Great Harwood). He extolled the virtues of the Song Thrush, Blackbird, Missel Thrush, Fieldfare, Redwing, Skylark, Woodlark, Nightingale, Blackcap, Redstart, Lesser and Greater Whitethroats, and Starlings. He gave the exhibition points and standard of a good bird, also his method of keeping them in commencing. He had some nice ingredients for the making up of Softbill foods. He then gave his experience in and method of keeping the Linnet, Goldie, Yellow Bunting, etc., strongly recommending the wild seed for bringing up the bloom so much required after the moult. After a few question were asked and answered, the meeting was brought to a close by a hearty vote of thanks to the lecturer for his instructive lecture.—JAS. W. PHILPOTT, Sec.

TONG AND DIS. C.B.S.

At our monthly meeting on April 14th we had a very large gathering of members and friends. The main items of the evening were, "Shall we join the Yorkshire Union?" and a paper by Mr. A. Bottomley on "The Rearing and Breeding of the Yorkshire Canary." With reference to the first item, it was unanimously decided to join the Y.U. After what was said by Mr. S. Dean, who was with us, Messrs. T. Ogden (Ogden Bros.) and W. H. Shackleton were duly elected Union delegates. Mr. Bottomley was then asked to give his paper, which he did in fine style, taking great pains to mention all the ins and out of the rearing and breeding of the Yorkshire Canary. He gave us some very useful hints, which were very much appreciated. A great many questions were asked, and were answered to the satisfaction of all. At the close Mr. Bottomley was heartily thanked for his services, and suitably replied. We shall be pleased to see all Fanciers and friends at any of our lectures, etc.—J. SMITH, Secretary.

SOUTHERN YORKSHIRE CANARY CLUB.

Annual Report.

The annual meeting was held at the Napier Tavern, Holborn, W.C., on April 10th. The President (Mr. R. L. Crisp) presided over a numerous attendance. The balance-sheet was adopted, and showed a balance in hand of £3 3s. 7d., against 6s. 8d. last year, with assets to the value of £1 12s. 8d. The Chairman presented the prizes, and congratulated each upon their success. The trophy winners were:—First, Mr. J. Hawes; second, Mr. H. Knight; third, Mr. A. E. Pattrick; fourth, Mr. W. J. Webb; fifth, Mr. J. W. Rennie; sixth, Mr. R. L. Crisp. Novice teapots, Messrs. W. S. Bennett, J. Carson, J. Dobson, T. W. Adams, and C. H. Withers. Novice medals, Messrs. Carson, Dobson, Rooke, Rorke, Edwards, and Cross. Ladies' specials, Mrs. F. Smith, Mrs. Vipond Crocker, and Miss Price. For Messrs. Ramsden's and Easterling's specials Messrs. Mabey and Knight tied, and Mr. W. J. Webb was third. Mr. Easterling's cup, Mr. R. L. Crisp; Mr. Browne's teapot, Mr. W. J. Webb; and Mr. Gladwin's special for first year champion, Mr. J. Hawes.—A very hearty vote of thanks was accorded the donors of special prizes, also to the vice-presidents and committee for the valuable services rendered to the club during the past year, and to Mr. V. Wynn for so ably acting as scrutineer.—The Secretary, in making a retrospect of the past season, said he thought the Club could claim to have had a very successful one, as by the members subscribing so generously to the special prize fund, which reached the total of £10 10s., and the special prizes, so kindly presented by Messrs. Gladwin, Ramsden, Broome, and Easterling, the members had during the past season won prizes to the value of £24, all outright. He said he would like to take that opportunity of thanking the subscribers and donors of special prizes. The shows to which patronage had been given had had splendid entries in both sections. In the six champion shows they had had 889 entries, giving an average of over twenty per class. Cardiff stood first with an average of nearly 33, and Hastings lowest with an average of 10½. The novice classes had not been of quite so good an average. The patronage given to Llanelly was void, there only being three Club competitors. The other five shows had an entry of 467, an average of over 15 per class. We have had twenty new members during the past year, the number paying subscriptions being 95, an increase of 12 over that of last year. The balance has slightly increased. I am pleased to say we have gone through the season without any disqualifications, etc., although personally I think the long birds at Plymouth were disqualified, as they were left out of competition. Several members expressed their approval of convening a meeting to discuss the length question, but upon consulting the President we concluded we should gain nothing by having a meeting. Owing to the C.B.U. Rule, more novices now pass to the champion ranks than when our novice definition was a "first at three separate shows," and personally I think if our novice classes are to fill well we must obtain a good many new novice members. The committee have only met on a few occasions, and I am pleased to say nearly every committeeman residing close by attended. In conclusion, I should like to thank the Press for their kindness in inserting notices and other matters appertaining to the Club. This not only gives publicity to our members, but brings the Club to the notice of all Fanciers, which greatly helps to bring us new members. Up to the present this year we have seven new members. The result of the voting for officials was as follows:—President, Mr. R. L. Crisp, 45 votes; vice-presidents, Messrs. A. E. Pattrick (38), J. Robson (37), F. Easterling (35); committee—London: Messrs. J. W. Ramsden (30), J. Tyson (28), G. H. Couzens (23), C. W. Mabey (23), W. Maybank (22), H. Peverall (22); Provincial: W. G. Elsmore (32), Capt. Fellows (26), F. J. Gibbs (18), W. W. Warr (18), R. P. Broome (17), E. A. Lovell (15); hon. auditors, Mr. G. F. Males and Miss Craddock; hon. treasurer, Mr. R. L. Crisp (34); hon. secretary, Mr. J. W. Reunie (47). The notices of motion were then discussed and voted upon, as under: No. 3, "that no patronage be given after the 14th"—lost. No. 4, "to amend Rule 11 by the addition of unlighted class, to read 'yellow and buff'"—lost. No. 5, "that the Club shall not give its patronage to more than one show in the same week"—carried. No. 6, "that preference be given to shows applying for the Club's patronage, which employ specialist cage bird judges"—carried. No. 7, to amend rule 4, "To substitute seven days for fourteen days"—carried. No. 8, to amend Rule 12 by the deletion of the words "confine the classes to novice Club members only"—carried. No. 9, "that by-laws 8 and 9 be transferred to rules"—carried. No. 10, "that a £10 10s. or £21 challenge cup be subscribed for and be competed for at shows held under the S.Y.C.C. patronage (champion section) to be won three times, not necessarily in succession, before becoming the absolute property of the winner." This met with the approval of the meeting, and was left to the committee to deal with, as was the motion, "That patronage be given to more shows."—The Secretary read a letter from the secretary of the Y.C.C. respecting upholding each other's decisions in regard to fraudulent practices, etc., and this met with approval. Motion No. 11 (a) "That in future only those birds bred by exhibitors shall count in the Club's competitions, and (b) Names of breeders of exhibits shall be stated on entry form and catalogue." This motion was lost.—A very hearty vote of thanks to the President, proposed by Mr. Robson, and seconded by Mr. Dewhurst, terminated a very pleasant evening.—J. W. RENNIE, Hon. Secretary.

WEST OF SCOTLAND N. & B.F.C. M.B. AND F.B.A.

The usual monthly meeting was held on April 4th, Mr. T. A. Boyd, president, in the chair. It was unanimously agreed to have a ramble on June 6th, the train leaving Glasgow at about 2.45 p.m. to some convenient spot. The ramble is being arranged by the committee. A bowling match is also being arranged by the committee between the Canary and British bird sections, and all members are requested to be at the next meeting, when the rinks will be drawn. Mr. R. Tomlinson (Paisley) was enrolled as a member. The secretary will be pleased to hear from any intending members, and to give any information. Mr. Jas. Anderson judged the table show of British birds. Mr. John Young secured two firsts for British Goldfinch and Linnet, and Mr. A. Muir swept the decks in Foreign Goldfinch, Greenfinch, Siskin or Redpoll, and Bullfinch hen. There will also be a table show at our next meeting, and two classes will be provided for Softbills—one each for Yellowhammer, Chaffinch, and Bramblefinch.—GEO. SMART, Secretary.

FROME F.A.

There was a large attendance at the monthly meeting held at the Lamb Hotel on April 8th, Dr. Percival Cockey presiding. The object of the meeting was to hear a lecture on Canary breeding and colour feeding by Mr. C. E. Brown, of Shirehampton, Bristol. Dr. Cockey, in introducing the lecturer, mentioned that he was well known as a practical breeder and successful exhibitor, having been awarded the medal for the best-fed bird at the great Crystal Palace Show in February.—Mr. Brown, before reading his paper, stated that he had read it before the Bristol Fanciers, and that they had decided to have it printed and distributed amongst the members. The lecturer in a practical manner explained his method of preparing, feeding, and moulting the birds, and satisfactorily answered questions put by Mrs. White, Miss Walker, and Messrs. A. Barnes, W. Minty, P. Edwards, White, Pickford, H. Coombs, the Secretary (Mr. C. I. Young), Dr. Cockey, and others. The Chairman, in proposing a vote of thanks to the lecturer, said he was struck by the knowledge displayed by the lecturer, who evidently knew the medicinal value of the articles mentioned, as in almost every case they were the same as would be prescribed in similar cases in the human race.—June 18th was fixed for the young bird show.—A vote of thanks to the chairman concluded a most successful meeting.—C. I. YOUNG, Secretary.

KENT COUNTY C.B.A.

The executive inform those societies in Kent desirous of the Association's patronage that application must be made to the hon. secretary (Mr. Geo. Sanderson, 17, Beaconsfield Avenue, Dover), not later than July 31st, or their applications may not be considered. As last year, the competition for the Mule Cup will be by birds of any age. Societies receiving the Association's patronage will be required to provide classes for birds bred during the current year where the competition for the Association's bowls is confined to birds bred during 1908. All members who are not already aware of the fact, please note that our chairman (Mr. Nelson Campany) offers a gold medal to the member who introduces the greatest number of paid-up new members during 1908. The medal will be a substantial one, and well worth an effort to win. Subscriptions are solicited for the purchase of a rose bowl for Borders, to replace the silver cup won outright last year by Dr. Bowes, of Herne Bay. That gentleman has generously started the ball rolling with 10s., and several smaller sums have either been paid or promised. Will those members who intend adding their "mites" kindly communicate with me, stating the amount they are willing to contribute? Hurry up, gentlemen, and let us see what we can do for the "natty little Border." It has been decided that we hold an Association show this year, but the date and town has not yet been fixed.—GEORGE SANDERSON, Hon. Secretary.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else.

ILLUSTRATED IDEAS

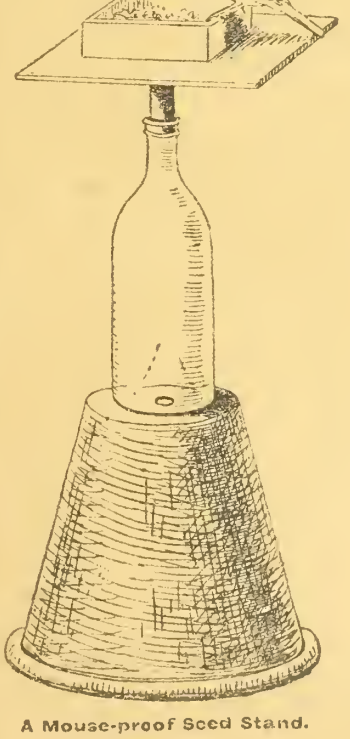
Under this heading we shall illustrate weekly some ideas useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 199.

A MOUSE PROOF SEED STAND.

Sent by J. H. Rollins, 2, Charles Street, Headless Cross, Redditch.

Enclosed is a sketch of a seed stand, which will serve to keep the mice from the seed. It costs but a few pence. You require one flower pot, about ten inches high, one pint bottle, and two pieces of



A Mouse-proof Seed Stand.

wood (one 3 inches by 1 inch by 1 inch, and one 6 inches by 1½ inches by ½ inch). Place the flower pot upside down, and place the bottle on the top of the pot. Then take the three-inch piece of wood and shape it to fit the neck of bottle. Afterwards nail the piece of board on the top of it. Then put the seed-box on the top of this board. The glass bottle, being smooth, the mice cannot climb it to get the seed.—J. H. ROLLINS.

No. 200.

A DATE TABLET FOR HATCHIN EGGS.

Sent by J. Fowler, 60, Queen Street, Le

I enclose you a copy of a system I u in my bird-room in reference to eggs hat ing. As Canary eggs hatch in 11 da this simplifies matters very much. my breeding cages are numbered. Whe set a Canary I refer to the register, a take the date next but one on the sa line, and write cage number underne Say it is April 14th, for instance, then latter date is April 28th. I find t plan of keeping account very easy, a have only to look at the register to when the eggs are due to hatch. — FOWLER.

NORTHAMPTON HAND-IN-HAN C.B.S.

The annual meeting was held at the club ho Foresters' Arms, on March 31st. The balance-sh for the past year was passed as read by the a tors, Messrs. Law and Brettinfield; it shows a balance in favour of the society of £5 15s. This, together with other assets, brings the t to £10 0s. 6d. The presidents and vice-presid were all re-elected for the ensuing year, tog with the following executive committee:—Me A. Burrows (chairman), J. Martin (vice-chairm G. Brown, sen. (treasurer), J. Nason (secret Geo. Jeffs (collector), W. Munday, A. W. Law, A. G. Brown (committee). Messrs. Dickens, and Moreton were appointed on the investiga committee. It was decided this year that society should hold an All-England Open Show October 17th and 19th, Mr. J. H. Roe, of De being engaged to judge; also that the Nest Fea Show be held on June 27th at the club house. hundred and forty-three entries were taken out same, and Mr. J. H. Roe was appointed to judg JNO. NASON, Sec.

I have changed my address from 47, Upper Grove Street, Smethwick, writes Mr. W. Baker, to 50, Poplar Street, Smethwick.

Our society have fixed November 18th and 19th as the dates for our annual show, writes Mr. S. W. Collum, hon. secretary of the Lurgan C.B.S.

We hear that Mr. W. Thomas, late secretary to the Carlisle C.B.S., is leaving for Belfast, where he hopes to continue his efforts in the Fancy.

My stock is quite sold out, writes Mr. A. Riley (Leicester). I might add, too, that I have had a good season through advertising in CAGE BIRDS.

The Wolverhampton and Dis. C.B.S. have engaged Mr. F. A. Lester to judge Roller Canaries at our forthcoming show, writes Mr. F. Howes, the secretary.

My advertisements in your valuable paper, CAGE BIRDS, writes Mr. Wm. Thomas (Carlisle), were quite a success. I sold out in a few days, and had to disappoint some applicants.

The members' first feather show in connection with the Stockport B.F.A., will be held on June 18th and 19th, writes Mr. W. Stafford, the secretary. Mr. A. Wellings will judge.

We have a faithful old cat, which is nursing a Canary with a broken wing, two chickens and two kittens, all in the same basket, write Messrs. Hollins and Son (Hull). How is this for a happy family?

We learn from the secretary, Mr. Thos. Smith, that the name of Mr. R. Johnstone (Musselburgh) has been added to the membership roll of the Scotch Fancy Canary National Derby O.A.

Mr. A. H. Jones, of 25, Chandos-street, is leaving here to take up a new business at Abbey-road, Bearwood, near Birmingham, writes Mr. Chas. Draper, secretary of the Leicester and Leicestershire Hand-in-Hand C.B.S.

Your paper, CAGE BIRDS, came under my notice only recently, writes Mr. Ernest Mitchell (Penzance). I think it by far the best paper for those interested in the keeping and breeding of birds, and especially British and foreign.

CAGE BIRDS CHARTS.

No. 5 of "Cage Birds Charts" will appear in our issue of NEXT WEEK. Order your copy at once, and make certain of securing it.

Kindly state that ballot papers of the Open Norwich Plainhead Club have been sent out, and if any member has not yet received one, will he kindly communicate with me, writes Mr. O. Mitchell, hon. secretary, 13, Lodge Terrace, Bowling, Bradford.

I have removed from 60, Exchange Buildings, to 16, Victoria Terrace, Guiseley, writes Mr. W. S. Thompson, secretary of the Guiseley, Yeadon, and Dis. C.B.S., and all matters in connection with the society must be addressed to me at the latter address.

The annual general meeting of the Border Counties Norwich and Cinnamon C.C., writes Mr. Anthony Hay, secretary, will be held in Lockharts (room 10), 37, Clayton-street, Newcastle-on-Tyne, on May 2nd, at 6.30 p.m. The business is very important, and all fanciers are invited.

I shipped ten Canaries to Montreal (Canada) last week per ss. "Empress of Ireland," writes Mr. J. A. Taylor, the well-known Yorkshire Canary breeder and exhibitor, of Frizinghall, Bradford. I am also sending to Belgium this week a pair of exhibition Yorkshires. Both orders came through CAGE BIRDS.

Permit me to congratulate you upon the fine plate of my young Crested Hen on the front page of CAGE BIRDS of last week, writes Mr. W. Prance (Paddington, W.). Great credit is due to your artist, Mr. Norman. It was first at the City, and second at Battersea, the only times shown.

The Macclesfield and Dis. C.B.S. First Feather show has been fixed for July 11th (Saturday), in the Chestergate Assembly Rooms, writes Mr. F. Broadhurst, hon. secretary, and Mr. A. G. Davis, Manchester, will judge. The cage bird hobby still grows apace here, and we are anticipating good times in the future.

The undernoted judges have been selected for our show on October 31st, writes Mr. Jas. Logan, secretary of the Dysart C.B.S.: Scotch Fancy, Mr. W. McSwinton (Methil); Borders, Mr. J. Hamilton (Eskbank); Crests and Plainheads, Mr. J. McLay (Kirkintilloch); and British and Foreign birds, Mr. Peter Pettigrew (Glasgow).

The Macclesfield and Dis. C.B.S. has arranged an excellent programme of lectures, shows, washing competitions, etc., for the ensuing season, and fanciers in the vicinity would do well to communicate with the hon. secretary, Mr. F. Broadhurst, 77, Barton Street, Macclesfield, who will supply them with all particulars of membership, etc.

I have very much pleasure in announcing the removal of our society to St. George's Hall, writes Mr. W. Brotherton, secretary of the Rotherham C.B.S. We have engaged Messrs. W. Vardy and W. H. Shackleton to judge our open show on November 20th and 21st. All interested are cordially invited to become members of the society.

We have balanced up our last year's working, with the grand result of £6 2s., writes Mr. A. Flint, secretary of the Tideswell Cage Bird Improvement Society, and I wish to thank on behalf of the society all exhibitors who gave us their support. Our next show is fixed for November 14th, with Mr. J. H. Roe to judge, and we hope fanciers will note the date and help us to further success.

We have received from Mr. R. Hogg, of 17, Bridge Street (West), Middlesbrough, a very neatly printed illustrated catalogue of high-class aviaries, cages, wire-fronts, and bird-room appliances generally (which he will be pleased to send any reader on receipt of a postcard giving address). Mr. Hogg (who has had 20 years' experience), guarantees his goods as made of the best materials, and that orders will be promptly executed.

May I thank CAGE BIRDS for publishing Mr. Wear's ingenious contrivance for heating indoor bird-rooms?, writes Mr. H. W. Tomsett (Brockley, S.E.). There are many readers, I am sure, who will appreciate the idea very much, if only on the ground of its being so inexpensive. It really is a splendid idea, and no doubt will be used a great deal next winter. Mr. Wear will also accept my thanks for same.

Arrangements for the Dulwich and Peckham and Lewisham C.B.S. combined ramble, writes Mr. E. S. Lugg, secretary of the latter society, are in full swing, and tickets will be ready shortly. (Look for particulars in CAGE BIRDS next week). It will be conducted in two sections, under the leadership of a Surrey Cage Bird Society. We are promised an exceptional treat, and the date is May 10th. All fanciers and friends are invited.

Kindly state for the benefit of the Welsh and other fancier friends of Mr. James Pritchard, of Mountain Ash, writes Mr. T. L. Castree (Mountain Ash), that after a long and painful illness his beloved wife passed away on Monday, April 13th. Mr. Pritchard is so well known as a breeder and exhibitor of Norwich Plainheads that I am sure his many friends will, with myself, greatly sympathise with him under such sorrowful circumstances. The funeral took place on Good Friday.

The birds and cages were all sold in one lot the same day my advertisement appeared writes Mr. W. Laskey; in fact, I could have sold them over and over again. I was quite surprised to get so many applications. You will, I know, be pleased to hear this, as it speaks well for CAGE BIRDS, and such results must be most gratifying to both you and those that advertise with you. I sail on the "Empress of Ireland" on Good Friday, and herewith convey my kindest remembrances and best wishes to friends in the Fancy. My next address will be, care of Mr. Mountain Bailey, 3,124, Westminster Avenue, Vancouver, B.C.

Thank you very much indeed for the great honour you have done my bird, the Bramble-finch-Chaffinch Hybrid, by giving him premier honours in your delightful CAGE BIRDS ANNUAL, writes Miss Janette Reeves (Wateringbury). He is indeed greatly honoured by appearing on the beautiful coloured plate. I am charmed with the ANNUAL, as I had never seen it before, and had no idea there was published such a useful little book for bird lovers. The country is just lovely now, and I have found Wrens', Robins', Hedge-sparrows', Blackbirds', Thrushes' and Missel-Thrushes' nests, and have a hen Bullfinch in one of my aviaries building.

Rooks as Weather Prophets.

The opinion of a farmer who regards Rooks as weather prophets is recorded by the "West Somerset Free Press." If the birds build their nests high in the trees, he states, the spring will be a wet one, while if they build low it will be dry.

English and Welsh Border Fancy Club.

Owing to an oversight, the points gained at the International Contest by the Southern division members were omitted from my last week's report. The following is the corrected result:—D. Jenkins, 21; Poole, 20; Cubby, 17; Thompson, 15; Hawkins, 12; Brownlie, 12; Sheldon, 12; E. R. Roberts, 9; Walker, 8; Hadwin, 6; Waters, 6; J. Pearson, 5; W. J. Jenkins, 4; Pennington, 4; Hopper Bros., 2; Woodman, 1.—S. HADWIN, secretary.

Timing the Lark.

Regarding the popular statement that the time of the Lark's song does not exceed two and a half minutes' duration, Mr. T. D. Ward writes in a contemporary:—In the year 1902 I had one particular bird under observation, and found that at the beginning of February his song was finished at the end of a few seconds; by March 2nd it had extended to 2min. 25secs., and on April 16th it was usual for him to carol for 3min. 35secs. The result of this observation inclines me to believe that as the spring advances the time of the Lark's song becomes extended.

The most delightful and appropriate Postcards for Bird Lovers on the Market are those published by "Cage Birds"

"CAGE BIRDS" GREAT ESSAY COMPETITION.

The Result in two of the Sections.

In our great Essay Competition it will be remembered that we offered four cash prizes of one guinea each for the four best original essays dealing respectively with Canaries, British Birds, Mules or Hybrids and Aviaries. As we have previously had occasion to state, the task of the judges has been a long and arduous one, so keen has been the competition. In two of the sections, however, the winning essays have been decided upon.

The Canary Section.

In the Canary section the first prize has been awarded to—

Mr. J. B. Waterman,
9, Herne Grove,
Dunstans Road,
East Dulwich.

for an essay entitled "Canaries: Their Management and Exhibition." Of the keen struggle for this prize we shall have more to say next week.

The British Bird Section.

In the British Bird section the first prize has been awarded to—

Mr. J. Jeffrey,
144, Wood Street,
Kidderminster.

for an essay entitled "Twelve Years' Experience with the Nightingale."

The results in the two remaining sections, with fuller particulars of the competition in all of them, will be given in next week's CAGE BIRDS.

Cage Birds Annual

— For 1908 —

The Standard Guide to the Fancy, is

A MARVELLOUS SIXPENNYWORTH

—absolutely the best ever put before the Fancy.

LETTERS OF APPRECIATION REACH US BY EVERY POST.

A charming new cover, many beautiful illustrations of winning birds printed on art paper, a lovely coloured plate for frontispiece, a complete revision of all the popular features, and the addition of strikingly useful new features, mark this 1908 issue.

The articles, too, have never been excelled, and both Canary, Hybrid, British and Foreign bird keepers have been specially catered for. The needs of the beginner have likewise been given the fullest consideration.

Key to Judges' Initials (See page 371. No. 326.)

THE LANCASHIRE AND CRESTED CANARIES.

Lecture delivered before the Stockport B.F.A. on April 9th.

There was a good attendance of members on April 9th to hear Mr. G. W. Oldham's lecture on Lancashires and Crests. Mr. T. E. Dickenson presided. Mr. Oldham, in his opening remarks, said he had not been a very big exhibitor, but he had studied the various points of the two varieties, and what he had to say would be the result of his own experience. He did not claim to know everything about Lancashires and Crests, but what he did know he offered to tell them. He thought fanciers gained knowledge quicker by practice than by theory.

The Lancashire Coppy.

In speaking of the Lancashire, he dealt with the Coppy first, and described the shapes of coppy. Some were flat, he said, some oblong, and some drooped, and it was difficult to follow judges sometimes, as they differed in the type they favoured.

The bird he liked was one with a nice neat coppy, having the centre in the right place; one that was upstanding, with good strong legs, nice neck, fairly large bulk and size, neat wings and tail. He did not forget colour, he said, as nothing looked nicer to him than a yellow Coppy carrying a good colour.

If fanciers found that the Coppy was too scanty, then he would advise them to double Coppy; but when they bred double Coppy the birds used must be yellow paired to Buff, and not double Buff, as this shortened feather, was a point not required in a Lancashire.

The Lancashire Plainhead.

The lecturer then went on to speak of the Plainhead Lancashire. The bird was similar in build to the Coppy excepting in the head, which he contended should show true Lancashire properties—good head and lash, and running away smooth at back, and not a bird that one could hardly tell from a Crest Bred. The lecturer explained that there was a lot to learn from a Plainhead, and he advised to fix a strain to double Coppy, so that the fancier would have a better percentage of Coppies to start with; also to keep the best. The birds must be in vigorous condition; also they should be free from markings

The Norwich Crest.
